

Search Methods

There are two search features; one for Production wells and one for Observation wells (and springs). Each record type has its own tab.

For Observation Wells: click that tab, and then enter **Owner Name, Well Report Number**, or both, then click **Search**. To start a new search, click **Clear** and then enter new information. Each Observation Report Record has a link (in blue) back to its Production Well Report.

There is a link (in blue) to open GIS Atlas Map page showing the Observation Well location on our ANR Atlas.

At the top right of the page there is a **Tools** button. When not in Edit mode, you can show or hide all of the data field names.

To start a new search, click **Clear** and then enter new information.
