

The Vermont Clean Water
State Revolving Fund

Intended Use Plan

for Federal Fiscal Year 2019
and State Fiscal Year 2020

June 1, 2019

Prepared by Facilities Engineering Division
Department of Environmental Conservation

 **VERMONT**
AGENCY OF NATURAL RESOURCES
Department of Environmental Conservation

Executive Summary

Vermont sends to the U.S. Environmental Protection Agency (EPA), as part of its annual application for a Clean Water Capitalization Grant under Title VI of the Water Quality Act of 1987 (the Act), a Clean Water Intended Use Plan (CWIUP) to meet the requirements of Section 606(c) of the Act and the Clean Water Capitalization Grant Agreement. The CWIUP serves as the planning document to explain how each fiscal year's appropriation for the Vermont – EPA Clean Water State Revolving Fund (CWSRF) will be used.

Project priority points awarded in accordance with the Department's Municipal Pollution Control Priority System are listed on the SFY 2020 Pollution Control Project Priority List.

Whether all construction projects ready to proceed in a particular year will be funded depends on the amount of funds allocated to the program by the Vermont legislature and through the federal capitalization grant for the Clean Water State/EPA Revolving Loan Fund (CWSRF). Planning projects are not funded in order of their priority, but rather at a rate necessary to bring sufficient projects to the implementation phase to use all of the anticipated grant and loan funds each year.

Appearance of projects on the Project Priority List indicates eligibility for funding assuming all other requirements are met. The dollar amounts may change from those listed as project cost changes affect the pro-rating of available grant amounts.

Attachment 1: SFY 2020 Project Priority List

CWSRF Program Goals

Short Term Goals

- (1) To provide local government with low cost financial assistance.
- (2) To coordinate National Pollutant Discharge Elimination System (NPDES) permit schedules with anticipated award of CWSRF loans such that projects are brought into preliminary engineering and final design planning in a timely manner to assure their readiness to proceed to construction when capitalization grant funds become available.
- (3) To provide funding assistance to municipalities seeking to comply with stormwater or wastewater Total Maximum Daily Load (TMDL) permit requirements.
- (4) To develop any rules, guidance or procedures necessary to implement the Vermont - EPA pollution control revolving fund, specifically State-issued guidance for the implementation of Water Resources Reform & Development Act (WRRDA) requirements.
- (5) To coordinate state funded pollution control grant activities for clean water projects with activities of the CWSRF.
- (6) To provide effective program management to ensure fiscal integrity of the CWSRF.
- (7) To incentivize preliminary engineering and final design activities to develop a queue of high priority, ready-to-proceed projects.
- (8) To expedite project development, funding and cash draws.
- (9) To address issues raised by US EPA Region 1 concerning the administration of the CWSRF.

Long Term Goals

- (1) To ensure the fund operates in perpetuity and provides continuing financial assistance to Vermont municipalities for clean water project needs.

- (2) To allocate available State grants, in combination with CWSRF loans to assure the most beneficial use of all available funding for water pollution control projects.

State Pollution Control Grant Eligibility

State Pollution Control (PC) grants may be available for certain projects in addition to CWSRF loans. Vermont legislation (Act 103, signed May 12, 2016) authorized substantive changes to Vermont's water pollution control grants program. The legislation replaces three grant categories consisting of CSO abatement (grant of up to 25%), dry weather sewage flow abatement, which may include nutrient upgrade work (grant of up to 35%), and sludge & septage improvements (grant of up to 50%) with a single, broader one referred to as water pollution abatement and control. This term is statutorily defined to include treatment of stormwater and sewage, groundwater protection, and flood resiliency work.

Act 103 established a set of public health, environmental, and affordability-based criteria that are used to determine state grant funding up to a maximum of 35% of eligible cost.

The Municipal Pollution Control Priority System Rule contained in Chapter 2 of the Environmental Protection Rules was amended and took effect December 1, 2017. Those changes to PC grant eligibilities takes effect July 1, 2019. Other than for previously completed grant-eligible projects or increases to existing categorical grants, no new categorical grants will be considered under this IUP.

These grants are appropriated at the discretion of the legislature and cannot be guaranteed by the program. If sufficient state capital funds cannot be secured to meet full grant eligibility, other funds may be provided to offset the shortfall in grant dollars, such as a CWSRF loan.

\$3.3M

**Anticipated
amount to be
appropriated
for pollution
control grants
in SFY20**

CWSRF Administration

Municipal CWSRF loans are currently issued at 0% interest with an administrative fee of 2% on construction loans. Private entity CWSRF loans will be set at 2% interest with an administrative fee of 2%, except when specific initiatives have an alternative rate as outlined in this IUP. Additionally, Brownfield Economic Revitalization Alliance (BERA) projects will be charged a 1% interest rate with an administrative fee of 2%.

Fee proceeds are deposited into a dedicated account separate from the CWSRF account, referred to as the administrative account. Administrative fee income for State FY2020 is projected to be approximately \$1.88 million. Historically, the program has described the fees as program income, but has tracked this fee income as either program or non-program income. The SRF program has detailed funds separately, to allow non-program income to be used for a broader array of CWA eligible activities than is allowed with program income. All fee income is accounted for in a separate fund outside the SRF fund.

Reallocated Funds between CWSRF and DWSRF

The Safe Drinking Water Act Amendments of 1996 (Section 302) allow a state to transfer up to 33% of the Drinking Water State Revolving Fund (DWSRF) capitalization grant from the DWSRF to the CWSRF or an equivalent amount from the CWSRF to the DWSRF for each open grant. This transfer is at the Governor's discretion.

In the event funds are reallocated from the DWSRF to the CWSRF, or vice versa, or additional federal funds are made available beyond the anticipated amount, Vermont will advance these funds to the appropriate projects in accordance with this Intended Use Plan, and the Municipal Pollution Control Priority System.

CWSRF Capitalization Grants FFY 2019

The federal fiscal year 2019 capitalization grant allotment available to Vermont is \$7,779,000 after allocating \$100,000 for the federal 604b program.

The required match is \$1,555,800 which will consist of state FY20 & FY21 capital funds, with \$1,538,103 to be available beginning July 2019 and the balance of \$17,697 anticipated to be available July 2020. The Sources and Uses table below assumes the total needed match will be available. Sources of funds and uses are listed below.

Sources	
CWSRF Capitalization Grant	\$7,779,000
State Match Needed	1,555,800
Repayments	9,502,137
Carry-Forward	70,345,062
TOTAL	\$89,181,999

Uses	
Anticipated Commitments	\$88,701,980
Administrative	480,019
TOTAL	\$89,181,999

The State matching funds will be deposited into the CWSRF prior to the quarter when federal funds are requested. The schedule for entering into binding commitments and timing of cash draws is contained in the grant application submitted to EPA. The CWSRF program will continue to comply with the Operating Agreement for Implementing and Managing the State Revolving Fund Program between the State of Vermont and U.S. Environmental Protection Agency, Region I.

Criteria and Method for Distribution of Funds

The Vermont General Assembly enacted Act 75 creating 24 V.S.A. Chapter 120 in the 1987 legislative session, which established Vermont's CWSRF and set out certain priority criteria for the purpose of ranking prospective projects. The Municipal Pollution Control Priority System rule incorporates those criteria in addition to criteria required in federal construction grant regulations 40 CFR Section 35.915.

The Vermont CWSRF initiated operations in fiscal year 1989 and all initial financial assistance activities of the CWSRF have been in the form of loans. Loans will continue to be made in accordance with a project's priority list ranking as noted on the Priority List that is established annually through the Municipal Pollution Control Priority System.

The Pollution Control Project Planning List is intended to show anticipated construction and planning projects for the immediate five-year period, inclusive of state fiscal year 2020. Although we anticipate a large volume of projects and requests for funds in state fiscal years 2020 to 2024, the fund will likely support the need, thus, a per project cap on the CWSRF loan funds will not be needed, as has been applied in past years.

Although the CWSRF may be used for the refinancing of local debt obligations incurred after March 7, 1985, Vermont has not used the fund in this way, and would only provide such funding if the balance remains underutilized and there is compelling justification of a public benefit to be secured.

Project Funding

Projects Anticipated to Receive FFY 2019 CWSRF available Funds*

* See attached Extended Portion of Intended Use Plan Project Funding List

(Award of FFY 2019 Funds are anticipated to be made during SFY 2020)

Project /Activity	Total Project Cost**	SRF State Match	Federal Share FFY 2018 Funds
See 2020 Priority List Attached	\$8,854,781	\$1,475,781	\$7,379,000
Vermont Administrative Expense	\$480,019	\$80,019	\$400,000
Total	\$9,334,800	\$1,555,800	7,779,000

Detailed project information is included in the attached Municipal Pollution Control Projects Priority List for state fiscal year 2020. The cash draw ratio of state to federal is 1:5, or an 83.33% federal share of the total.

Vermont CWSRF Payment Schedule FFY 2019EPA Capitalization Grant			
Payment No.	Quarter	Date	Amount
1	2020-1	10/1/2019-12/31/2019	2,000,000
2	2020-2	1/1/2020-3/31/2020	2,000,000
3	2020-3	4/1/2020-6/30/2020	2,000,000
4	2020-4	7/1/2020-9/30/2020	1,609,000
5	2021-4	7/1/2021-9/30/2021	170,000

Non-Point Source Funding

Vermont's CWSRF has an increasing focus on non-point source funding. The two new mechanisms to increase this type of utilization of the fund are through the establishment of the Water Infrastructure Sponsorship Program (WISPr) and the introduction of an Interim Financing for Natural Resources Projects Program.

** Costs will change as projects are refined

Water Infrastructure Sponsorship Program (WISPr)

The WISPr program was established in 2018 after the passage of Act 185 which established a mechanism for a municipality to “sponsor” a natural resources project, which would be forgiven over the life of the loan via a reduction in the administrative fee.

WISPr will be coordinating with the Clean Water Initiative Program’s (CWIP) Ecosystem Restoration Grant Program (ERP) to evaluate the technical merits of projects. Together the programs have the ability to provide significantly more funding to natural resources projects (NRP) than ever before. All NRPs seeking funding for planning, design, and implementation will apply to ERP on their funding cycle. Those projects will be provided with funding either through WISPr or ERP for planning and design. Once a project has completed design and is ready for implementation, it will be paired with a municipality that is willing to participate in WISPr.

To support planning efforts, the CWSRF will utilize up to \$250,000 to assist with the funding of projects that apply to ERP. These loans will become part of the project budget once the project goes to construction or implementation. If the natural resources project fails to construct or implement after five years, the loan will be forgiven.

The [WISPr policy](#) has been updated to reflect the alignment with ERP. Additionally, the policy has made the following updates:

- In accordance with the CWSRF Treatment Works Policy, WISPr will not require an environmental review as NR projects are categorically non-treatment works projects. The State Environmental Review Policy (SERP) may need to be revised to reflect this change.
- To ease accessing WISPr funds, the program will use Tier 2, or repayment funds, to support WISPr projects. These projects will not be reported in FFATA for equivalency purposes. As such, QBS procurement process will not be required.
- The policy now addresses the situation when a sponsoring project comes in significantly under the executed sponsoring loan agreement amount.
- The Program proposes to change the policy that sponsoring projects will receive additional priority list points for participation in WISPr. A sponsoring project will only receive points for their project and the financial benefit of the 0.1% administrative fee reduction. Effectively, a municipality will not receive additional priority ranking or PC grant eligibility for WISPr for participation.

Interim Financing for Natural Resources, Agriculture Water Quality & Forestry Conservation

Upon the passage of Act 185 in 2018, Vermont's CWSRF program can fund all federally eligible clean water projects and lend to all federally eligible entities, as outlined in EPA's [*Overview of Clean Water State Revolving Fund Eligibilities*](#) paper. The CWSRF proposes to utilize this expanded eligibility to promote investment in natural resource restoration, agricultural water quality, and forestry conservation projects with a clean water benefit.

To aid in this investment, this IUP is proposing the development of an interim financing program. The interim financing would be shown on the priority list as a "put aside" to ensure funds are available as needed, though private entity interim financing requests would need to ensure all known municipal projects are bypassed prior to funding. To ensure funding is flexible and available for the interim financing projects, the put aside would not require discrete projects be ranked on the priority list, but rather categorically ranked on this put aside. This would propose the following:

- \$20M "put aside" on the priority list for interim financing of all eligible natural resource restoration, agricultural water quality, and forestry conservation project. This financing would be at 0% for municipal applicants or 1% for all other applicants, for a term not to exceed 5 years. This interim financing allocates \$10M for municipal applicants and \$10M for private entities.
- In accordance with the SRF Repayment Start Date policy, the initial loan repayment would begin one year after execution of the loan agreement.
- The repayment schedule would be depressed for a lower principal and interest payment for the first four years, with a larger and final balloon payment in the fifth year.
- These loans would be subject to other statutory restriction for private entity borrowing, including the restriction of utilization of no more than 20% of the available fund and the requirement to offer funding to all eligible municipal projects prior to making this funding available.
- This funding is available on a first-come, first-served basis.
- To secure this funding, applicants must meet readiness to proceed requirements as outlined in this IUP and be able to pass underwriting criteria of either VEDA or VMBB.

Annual Report

In accordance with the requirements of Section 606(d) of the Act, Vermont will provide EPA with an Annual Report within 90 days of the end of the state fiscal year. The Annual Report contains information on how the state has met the goals and objectives of the previous fiscal year, as stated in the IUP and grant agreement. The Annual Report also reviews how well the existing SRF financial operating policies, alone or in combination with other state financial assistance programs, provides for the long-term fiscal health of the fund, assists communities

to increase local responsibility for compliance, and carries out other provisions specified in the State Clean Water Strategy. The Annual Report also provides information on loan recipients, loan awards/disbursements, and environmental assessment determinations.

The Annual Report will show that the State has completed the following:

- (1) Reviewed all CWSRF funded section 212 projects in accordance with the approved environmental review procedures (section 602(a));
- (2) Deposited its match on or before the date which each quarterly grant payment was made (section 602(b)(2));
- (3) Made binding commitments to provide assistance equal to 120% of the amount of each grant payment within one year after receiving the grant payment (section 602(b)(3)); and
- (4) Expended all funds in an expeditious and timely manner (section 206(b)(4)).

Environmental Benefits Reporting & Other Federal Databases

Environmental benefits will be reported using the Clean Water Benefits Reporting (CBR) federal on-line reporting system each time a loan is transacted during the fiscal year. This information is now being automatically reported via a data push from an internal database to the CBR website. Reporting to FFATA and NIMS will also be completed.

Program Changes

All projects receiving federal funds will be required to comply with the requirements of the federal Single Audit Act. All treatment works projects must comply with a NEPA like review, DBE reporting, Davis-Bacon, American Iron and Steel, and other federal crosscutters required by WRRDA, as applicable. Projects will be reported in FFATA until an amount equivalent to the federal grant has been met. However, the program does not use equivalency to apply federal crosscutters and they are applied to all projects, regardless of funding source.

Vermont's CWSRF continues to maintain its [Treatment Works Policy](#), [Emergency Bypass Policy](#), and [Green SW Definition Policy](#).

Loan Repayment Start Date

In the FFY2018 IUP, the program adopted a policy regarding when loans initiate repayment. This stated that projects will enter into repayment no later than one year after final completion and provided a consistent definition of final completion. Once implemented, it was noted that this requirement does not allow for loan recipients to

submit for disbursements throughout the warranty period. As such, this IUP proposes a revised policy that states that all loans will go into repayment in year one at their full loan value and in year two, those loan values will be reduced to reflect the disbursed amount.

Priority List Bypass Procedure

The revision of the Chapter 2 Priority Rule in December 2017 allowed for the implementation of a bypass procedure. In order to further prioritize the management of the priority list, the program proposes a [revised procedure](#) that requires, among other things, a preliminary engineering report (PER) by August 31 of each year for PC Grant and CWSRF Loan applicants. Projects not meeting this and other readiness to proceed dates may be bypassed in favor of lower ranking projects. For purposes of bypass, a project will be defined by a single priority list application. If there are multiple subprojects or sub-components within a priority list application, a PER submittal will be required for all subprojects.

Green Project Reserve

The Vermont requirement for Green Project Reserve (GPR) for federal fiscal year 2019 is 10% of the federal grant, or \$777,900. This year, projects indicated likely green project elements at an estimated amount of \$2,662,970. These projects are identified on the attached priority list. Many of these projects are early in the development phase and engineering and project development staff will work directly with municipalities and their consultants to incorporate green project elements into the project design.

In addition, the revisions to the Chapter 2 Priority Ranking criteria provide a framework for how projects should be prioritized for funding. This framework provides flexibility for the prioritization of federally mandated project types, including GPR projects.

While the goal for GPR is 10% of the federal grant, it is the position of the program to solicit and prioritize more than the minimum goal. This will ensure that if certain project elements have changed during the development and construction of a project that may reduce or eliminate GPR elements, there are sufficient GPR projects to meet or exceed this goal.

Additional Subsidy

Pursuant to the applicable 2019 federal appropriations act provisions, an amount equal to 10% of the grant must be provided as subsidy, or at least \$777,900. An additional amount equal to 30% of the grant, or \$2,333,700, may also be provided in the form of subsidy in accordance with the 2014 federal WRRDA provisions. In total, the fund may use up to 40% of the federal grant, or \$3,111,600 for additional subsidization. The program intends to utilize no more than \$3M in additional subsidy in this current IUP. Only municipal applications are eligible for additional subsidy.

For the Federal FY2019 IUP, the Clean Water State Revolving Fund (CWSRF) loan program is proposing to allow additional subsidy by way of the following avenues:

1. Principal loan forgiveness for planning costs up to \$2 million.
2. Principal loan forgiveness for Total Maximum Daily Load (TMDL)-related expenses of natural resources projects up to \$500,000.
3. Principal loan forgiveness for technology-based solutions to optimize and prioritize Combined Sewer Overflows (CSOs) and stormwater control systems, up to \$500,000.

Additional Subsidy for Planning

This avenue to receive principal loan forgiveness for planning includes feasibility studies, asset management planning, preliminary engineering reports, and final design projects. This IUP proposes to reserve up to \$2 million for these activities. Eligible projects may receive forgiveness for 50% of planning costs, up to \$100,000 per project, with a limit of no more than \$250,000 for each borrower. A single borrower may combine multiple projects for preliminary engineering or final design to reach the cap.

Additionally, all municipalities seeking funding for the following plan types will receive 100% forgiveness on their loans, up to \$100,000 per borrower:

- Long-Term Control Plans (LTCPs)
- Hydrologic & Hydraulic (H&H) Modeling necessary for LTCPs as defined in the CSO Rule (Chapter 34 of the EPRs) or for projects to reduce wet weather SSOs.

The forgiveness for these plans can be additive to the 50% forgiveness above and would not count toward the proposed cap. In other words, an applicant may receive the 100% planning loan eligibility for one project and may apply for planning additional subsidy for other projects. The \$100,000 would not apply to the \$250,000 cap on the 50% planning loan additional subsidy.

Additional Subsidy for TMDL-related reductions in Natural Resources Projects

This avenue to receive additional subsidy through principal loan forgiveness is directed to municipalities that have natural resource restoration or protection components of a funded project that support implementation of a nutrient or sediment TMDL, which include:

- Eligible Natural Resource Projects
- Wetland restoration projects
- Floodplain/stream restoration
- River corridor easements
- Woody buffer plantings
- Lake shoreland retrofit, erosion repair using LakeWise principles

- Dam Removal
- Portions of agriculture and forest conservation easements based on acres of special water quality protections (percent of acres of special water quality protection zones out of total acres conserved). A special water quality protection zone is a no-touch riparian buffer or wetland protection zone.

Of the total project costs, the amount that is directly attributable to nutrient reductions will be 100% forgiven, up to \$500,000. There is no cap per borrower and all determinations of nutrient reduction related costs will be determined by DEC. This may be done in conjunction with the Interim Financing for NR Projects Program or a traditional CWSRF loan.

Additional Subsidy for CSO and Stormwater Technology Based Solutions

This avenue for additional subsidy is for the installation of technology-based solutions to optimize existing control systems. Eligible project types include:

- Rain gauges for CSO communities that need to comply with the CSO Rule
- Flow metering of CSO discharges for volumetric monitoring and telemetric reporting
- Smart controls for stormwater projects to optimize stormwater storage where flow Volumes are the pollution problem
- Other technology-based solution that is approved by the Secretary.

Please note that SCADA system upgrades, energy efficiency, and telemetry projects are not eligible for this subsidy opportunity. Applicants would be eligible for 100% additional subsidy in the form of principal forgiveness, up to \$100,000 per borrower, with a \$500,000 total cap.

What Constitutes Planning Versus Construction Activities?

Activities that are regarded as construction are subject to additional construction procurement provisions that do not apply to planning activities.

Planning activities are those activities that take place during the feasibility, planning, and design phases of a project and where there is no significant alteration of existing ambient conditions. In general, if an activity involves excavation or moving soil or rock, it is not a planning activity. If a final design approval letter is issued for a project, the planning activities associated with the project must take place prior to issuance of the letter.

Examples of planning activities:

- Feasibility studies;
- Preliminary engineering reports and engineering studies;
- Development of compliance assistance tools

- Installation of equipment including sensors, meters, gauges, hardware and software used to store and interpret data;
- Sampling, lab work, and data analysis;
- Flow monitoring of CSO discharges including the capability to transfer data electronically in real time for the equipment being installed.

This is not an exhaustive list and other activities will be reviewed by FED on a case by case basis

Requirements to Secure Additional Subsidy

To secure additional subsidy for either criteria, applicants must comply with and submit the following:

- All additional subsidy is awarded on a first come, first serve basis.
- Only municipal applicants are eligible for additional subsidy
- Applicants may qualify for multiple types of additional subsidy under this plan. All eligibility can be additive, except as outlined under the 50% planning provisions above.
- Additional subsidy is considered reserved for a project upon receipt of the following:
 - Complete funding application
 - Qualifications Based Selection certification, if applicable
 - Draft Engineering Services Agreement
 - Relevant readiness to proceed criteria such as facility plan approval including environmental prior to securing additional subsidy for a final design loan and bond documentation and final design approval prior to securing additional subsidy for construction.

Affordability Criteria

The Water Resources Reform and Development Act of 2014 (WRRDA) amended sections of the Federal Water Pollution Control Act (FWPCA) that impact the Clean Water State Revolving Fund (CWSRF) loan program administered by Vermont's Department of Environmental Conservation. Section 603(i) was added requiring States to establish affordability criteria to assist in identifying municipalities that would experience a significant hardship raising the revenue necessary to finance a project or activity eligible under the CWSRF program, if additional subsidization is not provided. The amendment required States to establish the affordability criteria no later than September 30, 2015 after providing notice and an opportunity for public comment. It also requires that the criteria be based on income and unemployment data, population trends, and other data determined relevant by the State, including whether the project or activity is to be carried out in an economically distressed area as described in Section 301 of the Public Works and Economic Development Act of 1965.

The Department amended this criteria in 2018 to create consistency with the Chapter 2 Rule. There are no proposed changes under this IUP.

Public Participation

Vermont follows public participation procedures in the development of the annual Project Priority List (PPL), the CWIUP and in the environmental review process. The CWIUP is typically developed and adopted annually along with the PPL using the same public participation procedure employed for adoption of the PPL. That procedure is outlined in the Municipal Pollution Control Priority System rule. Vermont implements public participation for specific projects through the environmental review for CWSRF funded projects in accordance with the department's Environmental Review Procedures for projects funded through the Vermont/EPA Revolving Loan Program. This procedure was approved by the EPA Regional Administrator in accordance with the August 2, 1989 CWSRF Operating Agreement between the State of Vermont and the U.S. Environmental Protection Agency, Region I. A summary of the public comments that were received for this IUP are included in the following Section.

On January 15, 2019, the Department notified municipalities and other interested parties to apply to be included on the Municipal Pollution Control Projects Priority List for State Fiscal Year 2020 with a due date of February 15, 2019 for inclusion in the draft Pollution Priority List. On April 1, 2019, the Department released the draft IUP for public comment and on May 1, 2019 held a public meeting at the Annex in Berlin, Vermont at 10:00 a.m. This final IUP includes a public responsiveness summary to detail comments made throughout this process.

Responsiveness Summary

The following responsiveness summary is a list of questions and comments received at the May 1, 2019 public hearing through the public comment period ending May 15, 2019. Some comments have been edited for brevity and clarity:

Q. (Regarding a project on the priority list being bypassed by the CWSRF Program). If a project on the priority list gets bypassed should work on the project continue?

A. The project is being bypassed for construction funding only. If there is planning and design work that still needs to be completed for the project, then funding is still available for the that work, and that work should be completed so the project is ready for construction the following year.

Q. (Regarding future PC Grant incentivization). A comment was made that the PC Grant program should consider additional weighting for projects that specifically address age related infrastructure replacement.

A. This concern will be considered the next time that Chapter 2, the governing document for PC Grants, is modified. In the meantime, our program will consider incentivizing age-related infrastructure projects using additional subsidy in next year's IUP.

Q. (Regarding Interim Financing). Has a maximum loan amount for this benefit been established?

A. A cap per borrower has not been established at this time.

Q. (Regarding Additional Subsidy for LTCP and Hydraulic and Hydrologic (H&H)). Is it possible to get this 100% additional subsidy applied to a project retroactively?

A. Once the IUP is finalized, we will consider loan amendments.

Q. (Regarding Additional Subsidy). Does the project have to go through the Qualifications Based Selection (QBS) process?

A. Yes, all projects must go through the QBS process to qualify for funding and additional subsidy in the CWSRF program.

Q. (Regarding H&H Subsidy). Does this apply to H&H modeling combining through the overflow system or does it apply to the H&H specific to flooding?

A. It wouldn't apply to a project that isn't a CSO.

Q. (Regarding QBS for H&H). Comment was made that it doesn't feel like there is any flexibility with the QBS and the H&H is a lot of effort. Is there any kind of consideration for that?

A. QBS is a Federal CWSRF program requirement for all projects, regardless of type of project.

Q. (Regarding CSO Control Add Sub). What is a special water quality zone?

A. The special water quality zones are identified by the technical staff of the Watershed Management Division. If a new water quality zone is proposed, the technical experts in that Division will evaluate the proposal. It also has to be shown to be within the project area.

Q. (Regarding the CSO Control add sub). This add sub is only available for projects that are coming in after the IUP is adopted?

A. Yes. The loan approval for the project would have to be prepared and executed after the IUP is formally adopted.

Q. (Regarding the CSO Control add sub). Does this forgiveness apply to the engineering related work or just the monitoring equipment? A typical project would include the installation of level monitoring at strategic locations within the system and then that data would be monitored, analyzed, etc.

A. The equipment and the engineering are both eligible. Equipment purchase will need to follow procurement policy. The work necessary to install the equipment can also be considered.

Q. Comment: (Regarding WISPr incentives for municipalities to participate). Is the 0.1% interest rate reduction sufficient to get municipalities to participate in WISPr?

A: Since the program has removed most of the administrative barriers and participation requires relatively little effort for the municipality, it is believed by the Department that this incentive is sufficient to encourage participation. If this proves to not be sufficient, this policy can be reconsidered in the future.

Project Priority List (PPL) Applications that were received after the February 15, 2019 deadline and were processed are as follows:

Applicant	Project Name	Project Cost	PList Points
453 Pine St, LLC	Brownfield Project (BERA)	\$5,000,000	31
Addison, Town of	Addison Community Wastewater	\$680,272	39
Arlington School District	WWTF Disinfection System Improvements	\$70,000	27
Brattleboro, Town of	WWTF Upgrade PC Grant Only (Continuing)	\$6,000,000	49
Burlington, City of	2 previously submitted applications revised into 3 applications	NA	NA
Colchester, Town of	Malletts Bay Sewer Project	\$14,280,000	75
Pittsford, Town of	Depot Hill Rd Pump Station and WWTF Controls	\$970,000	38
Pownal, Town of	Pownal Landfill Project (Revised)	\$750,000	45

CSO= 25%; DWF=35%; and S/S=50%

* Denotes a planning need only in FY20 (these projects are not ranked)

Note: There are no Emergency Projects identified on this priority list

Note: Total estimated grant need of \$24,207,716, but it has not been determined what the grant appropriation will be.

C denotes continuing project. Additional funds may be needed.

Note: While all projects requesting construnfion funding are shown, it is not expected that all will proceed in SFY20.

Additionally, the allocation for interim financing is not expected to be fully utilized; therefore, no shortfall is expected. At the time that this list is finalized a fundable line will be provided as needed.
