Hi there,

I am a homeowner in Vermont, with a house on a lake in the state (Lake Bomoseen). I was very opposed to the application for herbicide use in the lake. I'm glad it was not approved. Furthermore, 'no' should be the default position for any chemical application in fresh water (or on land for that matter). Once we pollute the environment, we cannot take it back....and when in history has it EVER worked out well when people have put chemicals into water? There is a robust history of chemicals being deemed 'safe', only to have them turn out to be toxic later on. Let's not make that mistake in Vermont waterways.

Thanks,
