I am a resident living directly on Burr Pond at [REDACTED] in Sudbury. I am writing to support the use of ProcellaCor on our pond.

EWM has done substantial damage. Forcing out native species, limiting fishing, swimming and boating activities. We the homeowners who contribute physically, mentally and monetarily have seen the good the application of ProcellaCor does to the health of our pond. I have seen no adverse effects. Fishing is as good if not better than before the prior application and the plants not being choked out by milfoil are doing well also. This year we spent considerable time and money in trying to remove as much of this invasive species as possible by suction harvesting. It helped some initially but it quickly came back. Nothing as compared to the ProcellaCor application.

Our pond is small and it is only the efforts and money of the homeowners and the Homeowners Association that keep the pond from being taken over by milfoil.

We have done everything asked of us and now we wish to continue with another application.

Everyone is entitled to their opinion and I am well aware of what has taken place on other area lakes and ponds. However, they do not live here and are not contributing to our efforts here on Burr Pond.

Please approve our application and help us continue to keep the pond healthy.

Thank you.
