STIPULATION FOR SETTLEMENT OF OUTSTANDING ISSUES

Re: Jamaica Hydroelectric Project -
Appeal From Denial of Water Quality
Certification from Agency of Environ-
mental Conservation under 10 VSA §1269

WHEREAS, Jamaica Waterpower Company has appealed on February 17, 1984, the decision of the Department of Water, Resources and Environmental Engineering denying a water quality certification for the Jamaica Hydroelectric Project located on the West River in Jamaica, Vermont.

WHEREAS, representatives of the parties in interest met on June 1, 1984, and identified the tasks required to resolve the outstanding issues.

WHEREAS, the Jamaica Waterpower Company has subsequently proposed, (1) to operate the project run-of-river until such time as actual field measurements identified that some store-and-release mode of operation were acceptable, & that such measurements and studies would be completed with the first twelve months after commencement of project operation, and (2) to change its plan of project development to construct a separate outlet for the project rather than using the existing tunnel outlet.

NOW THEREFORE, the undersigned parties stipulate and agree that the Agency will issue a Water Quality Certificate subject to the Jamaica Waterpower Company operating the project run-of-river until such time as actual field measurements identified that some store-and-release mode of operation were acceptable, such measurements and studies to be made during the first twelve months after commencement of project operation, and the Jamaica Waterpower Company changing its development plan to separate outlet for the project rather than using the existing tunnel outlet.

Dated this 6th day of July 1934.
