Subject: Monitoring Well Closure Report; Clark Estate, 172 Stage Road, Pomfret, VT (SMS Site: # 2009-3994)

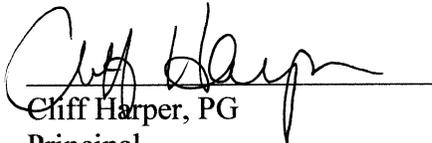

Dear Mr. Desmond:

The six monitoring wells (MW's 1-6) installed at the Clark Estate were closed by removal on April 1, 2015. The well covers and the PVC MWs were removed and the open boreholes were backfilled to grade with a mixture of bentonite and clean sand.

These MWs were installed in response to a petroleum release discovered during the closure of an underground storage tank at the subject site. Removal of the monitoring wells completes the Site Investigation and field work at the subject property. Please contact us at 802-672-6112 if you have any questions.

Respectfully yours,

Harper Environmental Associates. Inc
