Re: **DRAFT** Technical Narrative of September 2015 Alden Waterfront Soil and
Groundwater Assessment
Burlington, Vermont
JCO Project #: 3-3049-03
VTDEC SMS #: 2015-4595

Dear Mr. Bridges:

The Johnson Company (JCO) is pleased to provide the following Technical Narrative which summarizes our September 2015 assessment of soil and groundwater associated with the Alden Waterfront parcel in Burlington (the Site). In the interest of expediting the presentation of results, this Technical Narrative was prepared at the request of the Environmental Protection Agency (EPA) to present the assessment data so that the future jurisdiction (EPA or DEC) of the stockpiled and in-situ soils may be determined. JCO understands that the City of Burlington intends to host an informative meeting with the public to present the data and its implications, discuss the possible disposal and/or reuse option(s), and receive input from the community. Following this meeting the City of Burlington intends to issue a memorandum that will summarize the conclusions of this recent assessment, present the management alternatives considered, and finally present the preferred management option and timeline to be implemented as it relates to the soils currently stockpiled. The City of Burlington remains ahead of schedule in terms of the timeline agreed upon by DEC and the City to have a final determination made regarding the management of these soils by the December 15, 2015 deadline.

In 2014, during the Burlington Bike Path Rehabilitation project at the Site, visual and olfactory evidence of soil contamination was observed by the consultant that was overseeing construction (VHB). These observations resulted in approximately 2,500 cubic yards of soil being relocated and temporarily stockpiled in the lower parking area of Leddy Park, which is located approximately three miles north of the Site (see Attachment 1, Figure 1). Prior to JCO being retained by the City of Burlington in September 2015, a preliminary assessment had been performed which suggested that the stockpiled soils were impacted with select metals, polycyclic aromatic hydrocarbons (PAHs), petroleum hydrocarbons, and polychlorinated biphenyls (PCBs). After the EPA and the Vermont DEC reviewed the preliminary data, it was determined that more representative sampling would be required to better characterize the stockpiled soils, as well as conducting a soil and groundwater assessment in the area from which one of soil stockpiles

originated. An assessment was undertaken in response to the EPA and DEC request for further assessment of the soil contamination discovered during construction of the Alden Waterfront bike path as described in the August 21, 2015 DEC response letter to the VHB work that had been initiated at the Site prior to JCO involvement in the project. The following presents the results of the follow-up assessment conducted by JCO between September 14, 2015 and September 18, 2015.

1.0 INTRODUCTION AND BACKGROUND

The recent JCO assessment consisted of collecting a total of: 114 soil samples from the four stockpiles currently staged at Leddy Park; one sediment sample from a drainage swale located down gradient of the soil stockpiles; and 72 in-situ soil samples of at the Alden Waterfront beneath the clean-fill isolation barrier. Additionally, JCO installed two groundwater monitoring wells in the Alden Waterfront, along the bike path immediately east of the boat launch, and collected groundwater samples from these wells. This work was performed in general conformance with the August 10, 2015 VHB Burlington Bike Path Phase 1 Soil Characterization Work Plan (VHB Workplan) with modifications presented in the September 1, 2015 JCO Scope of Work (Revision 1) that were approved by the VTDEC and EPA.

The excess soils that had been generated during the Burlington Bike Path Rehabilitation (that are currently staged at Leddy Park) were segregated into four stockpiles designated as Stockpiles A, B, C, and D (see Figure 2). The segregation of these soils was based on 2014 VHB's field screening observations encountered during bike path construction (see summary of VHB soil descriptions provided below). These piles are currently isolated under thick black plastic that is secured by more than 300 sand bags, surrounded by hay bales, and a 6-foot tall rigid fence with appropriate notification signage. The black plastic was installed by JCO in July 2015. Prior to employing this more protective soil management alternative, the Stockpiles were covered and underlain with a thick reinforced clear plastic (which remains under the black plastic) and surrounded by orange fencing.

STOCKPILE A (~2,450 cubic yards):

Stockpile A consists of soils which did not exhibit visual or olfactory evidence of contamination and had photoionization detector (PID) volatile organic compound (VOC) screening values of less than 1 part per million by volume (ppmV). The VHB report states that a total of six composite analytical samples were collected from Stockpile A from points around the perimeter of the pile.

STOCKPILE B (~20 cubic yards):

The Stockpile B soils consist of soils which appeared to be petroleum-impacted during excavation, were visibly stained, and / or had PID headspace readings of up to 446 ppmV. One composite sample was collected by VHB from Stockpile B in 2014.

STOCKPILE C (~20 cubic yards):

The Stockpile C soils were darker, had wooden timbers incorporated, and PID headspace readings of 8 ppmV or less. One composite sample was collected by VHB from Stockpile C in 2014.

STOCKPILE D (~10 cubic yards):

The Stockpile D soils were stained blue-grey and had PID screening values of 1 ppmV or less. Following excavation in the Stockpile D source area, stained soils remained at the base of the excavation and one composite sample was collected from these in-situ soils. VHB did not collect a soil sample from Stockpile D in 2014.

The two primary objectives of the JCO September 2015 assessment were to better characterize the soils stockpiled at the Leddy Park in order to determine appropriate disposal and/or reuse alternatives and to assess the in-situ conditions in the northwest portion of the Alden Waterfront parcel (where Stockpile D soils originated). The purpose of the in-situ sampling was to better understand the degree and extent of soil and groundwater impacts remaining along the bike path.

2.0 FIELDWORK SUMMARY

This section summarizes the fieldwork methodologies and results for the Alden Waterfront soil stockpile sampling; the Leddy Park drainage swale sampling; the Alden Waterfront in-situ soil sampling; and the Alden Waterfront groundwater sampling. All samples were collected using either dedicated sample equipment (butyrate core liners, Ziploc bags, nitrile gloves, etc.) or with decontaminated sample collection tools. Reusable stainless steel sample collection tools were decontaminated between each sample collection event using the following procedure:

1. Remove residual soil with a dedicated paper towel
2. Wash with Alconox laboratory-grade soap
3. Rinse with deionized water
4. Wipe with a hexane-soaked paper towel. It should be noted that no hexane was spilled during decontamination or sampling.
5. Second Rinse with deionized water

The analytical soil results were compared to the residential Vermont Department of Health (VDH) soil screening values (SSVs) and the most recent (October 2015) residential and industrial EPA regional screening levels (RSLs). Note that the VTDEC Investigation and Remediation of Contaminated Properties (IROCP) specifies the use of the most recent Region 3 RSLs. However, as of October 2015 the EPA has combined the Region 3, 6, and 9 RSLs¹. The groundwater analytical results were compared to the 2005 Vermont Groundwater Enforcement Standards.

2.1 SOIL SAMPLE COLLECTION FROM STOCKPILES AND DRAINAGE SWALE

2.1.1 *Methodology*

Between September 14 and 16, 2015, JCO collected soil samples from the Alden Waterfront stockpiles (A, B, C, and D) currently staged at Leddy Park and from the drainage swale along the southwest edge of the Leddy Park lower parking lot. As requested by EPA and DEC, all samples collected were analyzed for PCBs and one-half of the stockpile samples were also analyzed for PAHs and lead. The specific laboratory analytical methods employed by the laboratory are presented in Section 3.2.

Stockpile A

Stockpile A was divided into six evenly spaced segments along the length of the pile and each segment was approximately 30-feet long by the width of the pile. The segments were then divided into five evenly spaced vertical intervals (sections) for a total of 30 sections. Sketches of segment and section locations are provided in the laboratory analytical summary tables (see Attachment 2). Attachment 3 provides the original laboratory reports. Three PCB laboratory analytical samples were collected from each of the 30 sections for a total of 90 PCB samples. Every other soil sample collected from Stockpile A was also analyzed for PAHs and lead, for a total of 45 samples.

On September 15, 2015 a decontaminated hand-auger was used to collect 60 of the 90 PCB samples and 30 of the 45 PAH/lead samples from the more exterior portions of each section. Next, on September 16, 2015 a track-mounted Geoprobe drill rig accessed the crest of the stockpile and advanced soil borings in order to collect the samples from the center portion of each of the 30 sections (30 PCB samples and 15 PAH/lead samples). It should be noted that in order to access the crest of the pile with the drill rig an access ramp was constructed using stockpiled soil near the southeast end of the pile (see Figure 2).

The protective plastic sheeting used to isolate the pile was re-established and secured immediately after the completion of sample collection. Weekly inspections and maintenance of this isolation barrier are ongoing and documented appropriately.

Stockpiles B, Stockpile C, and Stockpile D

On September 14, 2015, small openings were cut in the plastic sheeting and a clean, decontaminated hand auger was used to collect eight discrete samples from each of the three smaller stockpiles (Stockpile B, Stockpile C, and Stockpile D) for laboratory analysis. More specifically, each pile was divided into four quadrants and each quadrant was separated into two vertical segments, for a total of eight segments. One discrete soil sample was collected from each of the eight segments and analyzed for PCBs, and four of the eight samples were analyzed for PAHs and lead. A total of 24 samples were collected

from the three smaller stockpiles. The cuts in the sheeting were repaired immediately after the completion of sample collection.

Drainage Swale

On September 14, 2015 a decontaminated hand auger was used to collect a sediment sample from the 0-0.5fbgs interval in what could be considered the run-off flow-path of the drainage swale located to the southeast and down gradient from the soil stockpiles. This sample was analyzed for PCBs only.

2.1.2 Results

The following presents a summary of analytical results from the soil stockpile sampling that was performed by JCO between September 14 and 16, 2015.

PAHs: Stockpile A, Stockpile B, Stockpile C, and Stockpile D

Analytical results for each of the 57 PAH soil samples collected from Stockpile A, B, C, and D consistently reported concentrations of benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenz(a,h)anthracene, and indeno(1,2,3-cd)pyrene that exceeded the October 2015 EPA regional screening levels (RSLs) for residential soil and also the Vermont Department of Health (VDH) soil screening values (SSVs). The benzo(a)pyrene concentrations exceeded the industrial RSL in all but two samples (55 of 57), and isolated exceedances of the industrial RSL for other PAHs were also reported. With the exception of benzo(k)fluoranthene which was reported above the residential RSL in three samples, no other PAHs were detected at concentrations above regulatory screening levels. The Stockpile A, B, C, and D PAH analytical results and sketches depicting approximate sample locations are presented in an embedded figure on Table 1.

The PAH concentrations and analytes reported in the September 2015 JCO stockpile sampling effort are generally consistent with the results of the October 2014 VHB composite sampling event (see Attachment 5).

Lead: Stockpile A, Stockpile B, Stockpile C, and Stockpile D

The analytical results for the soil samples collected from Stockpile A, B, C, and D identified an exceedance of the residential RSL for lead in only five of the 57 lead samples. Of these five residential exceedances only two also exceeded the industrial RSL for lead. This trend, consisting of reported concentrations generally below the residential RSLs with the exception of isolated residential and/or industrial exceedances for lead, is consistent with the October 2014 VHB composite sampling event. The Stockpile lead analytical results and analytical sample location sketches are also presented in Table 1.

PCBs: Stockpile A

The analytical PCB results for soil samples collected from Stockpile A identified detections of PCB-1248, PCB-1254, and PCB-1260. Each of these compounds exceeded

the residential RSL or the VDH SSV in at least one sample from each of the six pile segments. In addition, at least one industrial exceedance was reported in segments 1, 3, and 5. The maximum concentrations of these three Aroclors were 1.3 mg/kg (PCB-1248), 2.6 mg/kg (PCB-1254), and 1.6 mg/kg (PCB-1260). The average concentrations were 0.18 mg/kg (PCB-1248), 0.22 mg/kg (PCB-1254), and 0.25 mg/kg (PCB-1260). The PCB-1254 average concentration exceeded the residential VDH SSV of 0.12 mg/kg but not the residential RSL of 0.24 mg/kg. The PCB-1260 average concentration exceeded the residential RSL of 0.24 mg/kg. The October 2014 VHB composite samples reported detectable concentrations of PCB-1260 at concentrations generally consistent with the September 2015 JCO samples; however, the VHB sampling results did not report detections of PCB-1248 or PCB-1254. The Stockpile A PCB analytical results and sample location sketches are presented in an embedded figure on Table 2.

PCBs: Stockpile B

The laboratory analytical results reported PCB detections at concentrations below the residential RSL and the VDH SSV in each of the eight soil samples collected from Stockpile B. These analytical results are generally consistent with the results of the VHB composite sampling effort. Stockpile B PCB analytical results and sample location sketches are also presented in Table 2.

PCBs: Stockpile C

The analytical results show that two of the eight soil samples collected from Stockpile C had reported detections of PCB-1248, PCB-1254, and/or PCB-1260 at concentrations greater than one or both of the applicable screening levels (EPA RSL and VDH SSV). No other PCB exceedances were reported. These results are not consistent with the VHB composite sampling effort. The VHB results only reported a detection of PCB-1260 at a concentration that did not exceed the residential EPA RSL. It should be noted that VDH does not maintain an SSV for PCB-1260. Stockpile C PCB analytical results and sample location sketches are also presented in Table 2.

PCBs: Stockpile D

The analytical results show that each of the eight soil samples collected from Stockpile D reported residential RSL and/or residential VDH SSV exceedances, and results for three of the eight samples had reported concentrations that exceeded the industrial RSL. The maximum detected PCB concentrations in Stockpile D were 0.27 mg/kg (PCB-1248), 2.3 mg/kg (PCB-1254), and 1.3 mg/kg (PCB-1260).

The VHB composite sample was collected from in-situ soils in the base of the excavation of the Stockpile D source area and not from the actual Stockpile D soils. The in-situ sample collected by VHB in 2014 had a reported PCB-1254 concentration of 7.25 mg/kg; however, PCB-1248 and PCB-1260 were not reported at concentrations that exceeded the laboratory's reporting limit of 0.981 mg/kg. The Stockpile D PCB analytical results are also presented in Table 2.

PCBs: Drainage Swale Sediment

No visual or olfactory evidence of contamination was noted in the drainage swale sediment sample and the analytical results reported no PCB detections at concentrations greater than the laboratory detection limit of 0.02 mg/kg, which is less than the VDH SSV for PCB-1254 (0.12 mg/kg). The drainage swale PCB analytical results are presented in an embedded figure Table 3.

2.2 IN-SITU SOIL SAMPLE COLLECTION AND MONITORING WELL INSTALLATION

2.2.1 Methodology

On September 17, 2015, a drill rig was used to advance two soil borings to a depth of approximately 13-feet below ground surface (fbgs) and 34 soil borings to a depth of 4-fbgs. Dedicated butyrate core liners were used to extract continuous soil cores from each boring location. Boring locations were as specified in the August 10, 2015 VHB Scope of Work with the exception of three soil borings which were slightly adjusted to avoid utilities and MW-1 which was adjusted due to refusal at approximately 6 fbgs which was encountered in the SB-1 borehole.

One monitoring well was installed in each of the two deeper soil borings (SB-1 and SB02) located on either side of the bike path. Well construction consisted of a 1-inch diameter, 10-foot long screen that was installed across the water table, a 1-inch diameter riser pipe, and a flush-mount road box. A sand filter pack was installed to approximately 1-foot above the screened interval and a 1-foot thick seal consisted of hydrated bentonite was installed over the filter pack. A thin layer of filter sand was installed over the bentonite seal to limit bentonite intrusion into the road box. Following installation, each well was developed by pumping groundwater at a high rate in order to remove fine particulates.

Soil samples were collected from each of the 36 soil boring locations. The upper sample was collected from approximately 6-inches below the bottom of the clean fill isolation barrier that had previously been installed at the Alden Waterfront and the lower sample was collected approximately 1-foot below the upper sample. It should be noted that in some instances a lack of soil recovery and/or compression of soils within the core liner prohibited sample collection of the lower interval from a depth 1-foot below the upper sample. The clean-fill isolation barrier varied in the thickness, but was typically observed to be approximately 10-inches within the core barrel where some degree of soil compression likely occurred. This thickness was estimated based on visual characteristics (soil type, soil color, the absence of "foreign" objects such as coal fragments, etc.). The approved Scope of Work specified PCB soil samples be collected from both the upper and lower intervals of each of the 36 borings and PAH soil samples be collected from four of the soil boring locations (SB-1, SB-02, SB-10, and SB-28) that were located near where VHB observed the more visually impacted soil in 2014. These PAH samples were collected from the upper sample interval in each of these borings.

2.2.2 Results

The following presents a summary of analytical results for the in situ sampling that was performed by JCO in September 17, 2015 in the Alden Waterfront.

PAHs

The laboratory results for the four in-situ soil samples collected from Alden Waterfront reported detections of at least one PAH at concentrations greater than the residential RSL and/or the residential VDH SSV in all samples. One detection of benzo(a)pyrene that exceeded the industrial RSL was reported in the sample collected from soil boring, SB-28 at a depth of 1-foot below ground surface. No other industrial exceedances were reported. The specific PAH analytes that had reported exceedance in the in-situ soils was consistent with the PAH exceedances identified in the stockpiled soils. Generally, PAH results from the September 2015 soil assessment were less than the concentrations reported by VHB during the 2014 in-situ soil sampling in this area. The in-situ soil PAH analytical results are presented in Table 4 and sample locations are shown on Figure 3.

PCBs

The laboratory results identify that PCBs were detected in the upper sample interval at concentrations exceeding residential RSLs or residential VDH SSVs in nine of 36 samples. Four of these sample results also exceeded residential RSLs. Data suggests that the samples collected from the lower interval were less impacted by PCBs than the upper interval, with only two of 36 samples reporting residential exceedances and no samples reporting industrial exceedances. The exceedances were mostly clustered to the east of the Stockpile D source area (where the 2014 VHB in-situ composite sample was collected) in an area immediately east of the bike path. Only two PCB Aroclors (PCB-1254 and PCB-1260) were detected from this recent sampling. The peak concentrations were 2.8 mg/kg (PCB-1254) and 1.3 mg/kg (PCB-1260). These concentrations are less than the concentrations reported in the 2014 VHB in-situ composite sample, 7.25 mg/kg (PCB-1254). The JCO in-situ soil PCB analytical results are presented on Table 5, and the sample locations and PCB screening level exceedances are summarized on Figures 3 and 4.

2.3 GROUNDWATER SAMPLE COLLECTION

2.3.1 Methodology

On September 18, 2015 a ground water sample was collected from each of the two monitoring wells that were installed by JCO in accordance with our standard operating procedure for low-stress groundwater sampling using a peristaltic pump. Prior to the start of purging, the static water level and total depth of each well was measured relative to the top-of-casing elevation (see groundwater sample collection logs, attached). Dedicated sample tubing was then installed in the well with the intake at the approximate vertical mid-point of the wetted portion of the well screen. The wells were then purged at a rate of approximately 200 ml/min until three

well volumes were removed. This flow rate did not result in significant drawdown of the water level in the wells. During purging, physiochemical parameters (temperature, specific conductivity, dissolved oxygen, pH, oxygen reduction potential, and turbidity) were measured at 5-minute intervals. Following purging, one sample was collected from each well for PCB analysis.

2.3.2 Results

PCBs

Analytical laboratory results indicated that no PCBs were reported at concentrations above laboratory detection limits in either of the groundwater samples or in the duplicate groundwater sample. The field parameters are summarized on Table 6 and the laboratory analytical results are presented on Table 7 (see Attachment 4). Monitoring well locations are shown on Figure 5.

3.0 QUALITY CONTROL SUMMARY

3.1 DUPLICATE AND BLANK SAMPLES

Blind duplicate soil samples were collected at a rate of one duplicate per 20 samples by placing sufficient sample volume in a dedicated zip-lock bag, homogenizing, and then filling both the parent and duplicate sample jars. The duplicate groundwater sample was collected by filling an additional 1-liter amber jar using the peristaltic pump. The relative percent difference (RPD) was calculated where both the parent and the duplicate sample reported detections. The RPD is calculated as the difference between the results divided by the average of the results, expressed as a percentage. For soil samples, RPD values less than 50 percent is desirable, while for groundwater (which is less heterogeneous) RPD values less than 30 percent are desirable. There were a number of soil RPD values greater than 50 percent, with the more elevated RPD values occurring in four of eight duplicate samples (SP-A-DUP-02, SP-A-DUP-03, SP-A-DUP-05 and SP-D-DUP-01). These elevated RPD values are most likely the result of soil heterogeneity. While not ideal, these results do not change the conclusions of this report. No groundwater detections were reported; therefore no RPD values were calculated.

Three field blank samples were collected by passing laboratory-supplied deionized water over the decontaminated hand auger used for stockpile sampling effort, over nitrile gloves for the in-situ soil sampling effort, and through clean peristaltic pump tubing for the groundwater sampling effort. No compounds were detected in any of the field blank samples.

3.2 LABORATORY ANALYTICAL METHOD SUMMARY

All samples were transported in ice-filled coolers under chain of custody protocol to Eastern Analytical, Inc. of Concord, New Hampshire (EAI) for laboratory analysis. Analysis of PCBs was conducted by EAI via EPA Method 8082 with Soxhlet extraction by EPA Method 3540. Samples collected for PAHs were analyzed by EAI via EPA Method 8270 with Selective Ion Monitoring (SIM) and metals samples were analyzed by EPA Method 6020.

3.3 LABORATORY QUALITY CONTROL SUMMARY

No laboratory data quality deviations were reported with the exception of the SB-04(2.5) sample of in-situ soil which had an elevated detection limit (0.04 mg/kg as opposed to the standard target of 0.02 mg/kg) due to a “higher than normal extract volume”. The laboratory reports indicated that samples were extracted and analyzed within holding times, instrument calibration was conducted in accordance with method requirements, method blanks were free of contamination at the reporting limits, surrogate recoveries met applicable criteria, and associated matrix spikes and or laboratory control standards met acceptance criteria.

4.0 CONCLUSIONS

Based on the analytical data and field observations collected between September 14 and 18, 2015, The Johnson Company concludes the following:

Stockpiled Soils at Leddy Park

- All stockpiles are contaminated with PAHs at concentrations above residential and industrial screening levels.
- The stockpiles are generally not contaminated with lead at concentrations above regulatory screening levels. However, isolated residential and industrial exceedances are present.
 - Stockpile A: Results suggest that three of the 45 samples exceeded the residential screening level for lead, and one of the 45 samples exceeded the industrial screening level for lead.
 - Stockpile B: No residential or industrial soil screening standards were exceeded for lead.
 - Stockpile C: No residential or industrial soil screening standards were exceeded for lead
 - Stockpile D: Results suggest that two of the eight samples exceeded the residential screening level for lead, and one of the eight samples also exceeded the industrial screening level for lead.
- Stockpiles A, C, and D appear to be contaminated with PCBs above the applicable screening levels.
 - Stockpile A: The majority of this pile is contaminated with PCBs at concentrations above residential screening levels and three of six segments are also contaminated with PCBs at concentrations above industrial screening levels. The average PCB concentrations are above residential screening levels but are below industrial screening levels.
 - Stockpile B does not appear to be contaminated with PCBs at concentrations above regulatory screening levels.
 - Stockpile C appears to be mostly free of PCB contamination in excess of regulatory screening levels, but two of eight samples do show that residential exceedances were reported.

- Stockpile D appears to be universally contaminated with PCBs at concentrations above residential screening levels. In addition, industrial PCB exceedances were reported in three of eight samples.

Leddy Park Drainage Swale Sediment

- The sediment sample collected from the drainage swale, located downgradient of the stockpile area, identified no PCB detections above laboratory reporting limits and therefore no exceedances of any of the applicable screening levels were reported.

Alden Waterfront Insitu Soils

- The in-situ PAH soil sampling suggests PAH contamination in samples collected from soils immediately below the protective clean-fill isolation barrier at concentrations above residential screening levels. One industrial exceedance was also reported.
- The in-situ PCB soil sampling results identified more elevated concentrations and a greater extent of contamination in the upper sample interval, which is suggestive of a surface release that likely occurred below the protective clean-fill isolation barrier prior to it being placed.

Alden Waterfront Groundwater

- The groundwater sampling did not show evidence of PCB contamination in groundwater, which suggests that the PCB impacted soil above the water table in this area has not adversely impacted groundwater, with respect to PCBs.

Should you have any questions or concerns, please do not hesitate to contact us.

Sincerely:

THE JOHNSON COMPANY, INC.

Tables

DRAFT

NOTES:

The following acronyms are applicable to the text and/or tables

Acronyms

---	=	Value Not Available or Not Calculated
Dup	=	Duplicate
EB	=	Equipment Blank
FB	=	Field Blank
IND	=	USEPA Industrial RSL
IROCP	=	VDH Investigation and Remediation of Contaminated Properties, April 5, 2012
PAH	=	polycyclic aromatic hydrocarbon
PCB	=	polychlorinated biphenyl
RES	=	USEPA Residential RSL
RPD	=	Relative Percent Difference (not calculated where one or both results are non-detect)
RSL	=	Most Recent USEPA Regional Screening Level (October 2015)
		NOTE: The IROCP specifies the use of the Region 3 RSLs. However, as of Oct 2015 the EPA has consolidated the Region 3, 6, and 9 RSLs http://www3.epa.gov/region09/superfund/prg/
SB	=	Soil Boring
SIM	=	Selective Ion Monitoring
SP	=	Stock Pile
SSL	=	VDH Soil Screening Level from the IROCP
SV	=	Soil Vapor
TSCA	=	Toxic Substances Control Act
USEPA	=	United States Environmental Protection Agency
VDH	=	Vermont Department of Health

Cell & Text Shading

Bold	=	Analytical Value exceeds SSL
Grey w/ Bold Text	=	Analytical Value exceeds Residential RSL
Black w/ White Text	=	Analytical Value exceeds Industrial RSL or VGES
Grey Text	=	Analytical Result: value is non-detect

Data Results and Qualifiers

<	=	not detected, value given is the laboratory reporting limit
---	---	---

Units

fbtoc	=	feet below top of monitoring well casing
ft	=	feet
ft-aps	=	feet above parking lot surface
ft-bgs	=	feet below ground surface
mg/kg	=	milligrams per kilogram
mg/l	=	milligrams per liter
mV	=	millivolts
NTU	=	nephelometric turbidity units
ppmV	=	parts per million by volume
Std	=	Standard pH Units
ug/l	=	micrograms per liter
uS/cm	=	microsiemens per centimeter

Laboratory Reports

DRAFT

Jeremy Matt
The Johnson Company
100 State Street
Montpelier, VT 05602

Subject: Laboratory Report

Eastern Analytical, Inc. ID: 148044
Client Identification: Leddy Park Burlington, VT
Date Received: 9/16/2015

Dear Mr. Matt :

Enclosed please find the laboratory report for the above identified project. All analyses were performed in accordance with our QA/QC Program. Unless otherwise stated, holding times, preservation techniques, container types, and sample conditions adhered to EPA Protocol. Samples which were collected by Eastern Analytical, Inc. (EAI) were collected in accordance with approved EPA procedures. Eastern Analytical, Inc. certifies that the enclosed test results meet all requirements of NELAP and other applicable state certifications. Please refer to our website at www.eailabs.com for a copy of our NELAP certificate and accredited parameters.

The following standard abbreviations and conventions apply to all EAI reports:

- Solid samples are reported on a dry weight basis, unless otherwise noted
- < : "less than" followed by the reporting limit
- > : "greater than" followed by the reporting limit
- %R : % Recovery

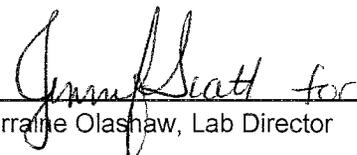

Eastern Analytical Inc. maintains certification in the following states: Connecticut (PH-0492), Maine (NH005), Massachusetts (M-NH005), New Hampshire/NELAP (1012), Rhode Island (269) and Vermont (VT1012).

The following information is contained within this report: Sample Conditions summary, Analytical Results/Data, Quality Control data (if requested) and copies of the Chain of Custody. This report may not be reproduced except in full, without the the written approval of the laboratory.

If you have any questions regarding the results contained within, please feel free to directly contact me or the chemist(s) who performed the testing in question. Unless otherwise requested, we will dispose of the sample(s) 30 days from the sample receipt date.

We appreciate this opportunity to be of service and look forward to your continued patronage.

Sincerely,

Lorraine Olanshaw, Lab Director

148044.23	SP-A-21 (13.5)	9/16/15	9/15/15	soil	91.0	Adheres to Sample Acceptance Policy
148044.24	SP-A-22 (10.5)	9/16/15	9/15/15	soil	92.9	Adheres to Sample Acceptance Policy

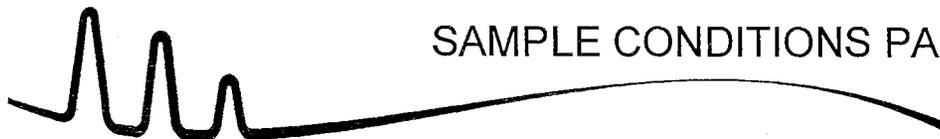

Samples were properly preserved and the pH measured when applicable unless otherwise noted. Analysis of solids for pH, Flashpoint, Ignitibility, Paint Filter, Corrosivity, Conductivity and Specific Gravity are reported on an "as received" basis.

Immediate analyses, pH, Total Residual Chlorine, Dissolved Oxygen and Sulfite, performed at the laboratory were run outside of the recommended 15 minute hold time.

All results contained in this report relate only to the above listed samples.

Samples were properly preserved and the pH measured when applicable unless otherwise noted. Analysis of solids for pH, Flashpoint, Ignitibility, Paint Filter, Corrosivity, Conductivity and Specific Gravity are reported on an "as received" basis.

Immediate analyses, pH, Total Residual Chlorine, Dissolved Oxygen and Sulfite, performed at the laboratory were run outside of the recommended 15 minute hold time.

All results contained in this report relate only to the above listed samples.

TEF: Toxicity Equivalent Factor

TEQ: Toxicity Equivalence to Benzo[a]pyrene

The TEF factors set forth in this report are taken from the following EPA document: "Mid- Atlantic Risk Assessment User's Guide: November 2013". This guidance document sets forth a recommended, but not mandatory approach based upon currently available information with respect to risk assessment for response actions at CERCLA sites. This document does not establish binding rules. This document contains the most current TEF values per VT IROCP.

TEF: Toxicity Equivalent Factor

TEQ: Toxicity Equivalence to Benzo[a]pyrene

The TEF factors set forth in this report are taken from the following EPA document: "Mid- Atlantic Risk Assessment User's Guide: November 2013". This guidance document sets forth a recommended, but not mandatory approach based upon currently available information with respect to risk assessment for response actions at CERCLA sites. This document does not establish binding rules. This document contains the most current TEF values per VT IROCP.

TEF: Toxicity Equivalent Factor

TEQ: Toxicity Equivalence to Benzo[a]pyrene

The TEF factors set forth in this report are taken from the following EPA document: "Mid- Atlantic Risk Assessment User's Guide: November 2013". This guidance document sets forth a recommended, but not mandatory approach based upon currently available information with respect to risk assessment for response actions at CERCLA sites. This document does not establish binding rules. This document contains the most current TEF values per VT IROCP.

TEF: Toxicity Equivalent Factor

TEQ: Toxicity Equivalence to Benzo[a]pyrene

The TEF factors set forth in this report are taken from the following EPA document: "Mid- Atlantic Risk Assessment User's Guide: November 2013". This guidance document sets forth a recommended, but not mandatory approach based upon currently available information with respect to risk assessment for response actions at CERCLA sites. This document does not establish binding rules. This document contains the most current TEF values per VT IROCP.

TEF: Toxicity Equivalent Factor

TEQ: Toxicity Equivalence to Benzo[a]pyrene

The TEF factors set forth in this report are taken from the following EPA document: "Mid- Atlantic Risk Assessment User's Guide: November 2013". This guidance document sets forth a recommended, but not mandatory approach based upon currently available information with respect to risk assessment for response actions at CERCLA sites. This document does not establish binding rules. This document contains the most current TEF values per VT IROCP.

Samples were extracted and analyzed within holding time limits.
 Instrumentation was calibrated in accordance with the method requirements.
 The method blanks were free of contamination at the reporting limits.

Sample surrogate recoveries met the above stated criteria.
 The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.
 There were no exceptions in the analyses, unless noted.

*! Flagged analyte recoveries deviated from the QA/QC limits. Unless noted below, flagged analytes that exceed acceptance limits in the Quality Control sample were not detected in the field samples.

p-Terphenyl-D14 (surr)	63 %R	71 %R	66 %R	9/18/2015	mg/kg	30 - 130		8270D

Samples were extracted and analyzed within holding time limits.

Instrumentation was calibrated in accordance with the method requirements.

The method blanks were free of contamination at the reporting limits.

Sample surrogate recoveries met the above stated criteria.

The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.

There were no exceptions in the analyses, unless noted.

*! Flagged analyte recoveries deviated from the QA/QC limits. Unless noted below, flagged analytes that exceed acceptance limits in the Quality Control sample were not detected in the field samples.

Acid clean-up was performed on the samples and associated batch QC.

SP-A-55 (1.5): PCB-1248 result obtained from a 2X dilution analyzed on 9/23/2015.

SP-A-56 (13.5): PCB-1254 and PCB-1260 result obtained from a 4X dilution analyzed on 9/23/2015.

SP-A-57 (10.5): PCB-1254 and PCB-1260 result obtained from a 5X dilution analyzed on 9/23/2015.

SP-A-59 (4.5): PCB-1254 and PCB-1260 result obtained from a 5X dilution analyzed on 9/23/2015.

SP-A-60 (1.5): PCB-1254 and PCB-1260 result obtained from a 10X dilution analyzed on 9/23/2015.

Samples were extracted and analyzed within holding time limits.

Instrumentation was calibrated in accordance with the method requirements.

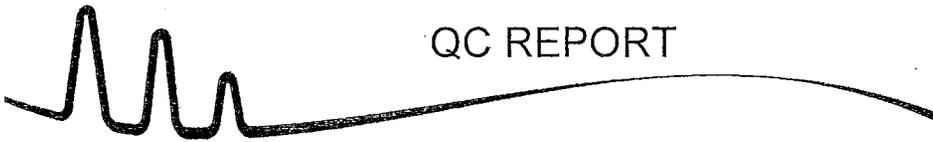

The method blanks were free of contamination at the reporting limits.

Sample surrogate recoveries met the above stated criteria.

The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.

There were no exceptions in the analyses, unless noted.

*! Flagged analyte recoveries deviated from the QA/QC limits. Unless noted below, flagged analytes that exceed acceptance limits in the Quality Control sample were not detected in the field samples.

DCB (surr)	90 %R	101 %R	90 %R	9/19/2015	% Rec	30 - 150	30	8082

Samples were extracted and analyzed within holding time limits.

Instrumentation was calibrated in accordance with the method requirements.

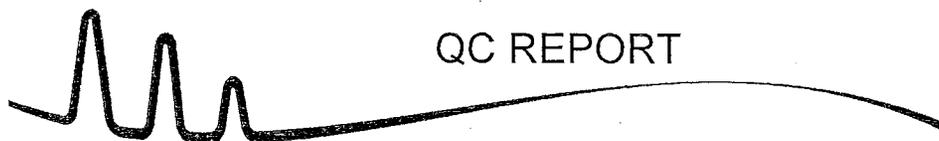

The method blanks were free of contamination at the reporting limits.

Sample surrogate recoveries met the above stated criteria.

The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.

There were no exceptions in the analyses, unless noted.

*! Flagged analyte recoveries deviated from the QA/QC limits. Unless noted below, flagged analytes that exceed acceptance limits in the Quality Control sample were not detected in the field samples.

QC REPORT

EAI ID#: 148044

Client: **The Johnson Company**

Client Designation: **Leddy Park Burlington, VT**

Parameter Name	Blank	LCS	LCSD	Units	Date of Analysis	Limits	RPD	Method
Lead	< 0.5	37 (93 %R)		mg/kg	9/18/15	80 - 120	20	6020
Lead	< 0.001	0.93 (93 %R)		mg/L	9/18/15	80 - 120	20	6020
Lead	< 0.5	39 (97 %R)		mg/kg	9/21/15	80 - 120	20	6020
Lead	< 0.5	40 (99 %R)		mg/kg	9/22/15	80 - 120	20	6020

Samples were analyzed within holding times unless noted on the sample results page.

Instrumentation was calibrated in accordance with the method requirements.

The method blanks were free of contamination at the reporting limits.

The associated matrix spikes and/or Laboratory Control Samples met the above stated criteria.

Exceptions to the above statements are flagged or noted above or on the QC Narrative page.

*! Flagged analyte recoveries deviated from the QA/QC limits.

Subject: Laboratory Report

Eastern Analytical, Inc. ID: 148121
Client Identification: Leddy Park Burlington, VT
Date Received: 9/17/2015

Dear Mr. Matt :

Enclosed please find the laboratory report for the above identified project. All analyses were performed in accordance with our QA/QC Program. Unless otherwise stated, holding times, preservation techniques, container types, and sample conditions adhered to EPA Protocol. Samples which were collected by Eastern Analytical, Inc. (EAI) were collected in accordance with approved EPA procedures. Eastern Analytical, Inc. certifies that the enclosed test results meet all requirements of NELAP and other applicable state certifications. Please refer to our website at www.eailabs.com for a copy of our NELAP certificate and accredited parameters.

The following standard abbreviations and conventions apply to all EAI reports:

- Solid samples are reported on a dry weight basis, unless otherwise noted
- < : "less than" followed by the reporting limit
- > : "greater than" followed by the reporting limit
- %R : % Recovery

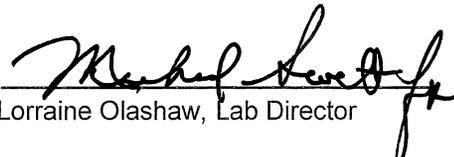

Eastern Analytical Inc. maintains certification in the following states: Connecticut (PH-0492), Maine (NH005), Massachusetts (M-NH005), New Hampshire/NELAP (1012), Rhode Island (269) and Vermont (VT1012).

The following information is contained within this report: Sample Conditions summary, Analytical Results/Data, Quality Control data (if requested) and copies of the Chain of Custody. This report may not be reproduced except in full, without the the written approval of the laboratory.

If you have any questions regarding the results contained within, please feel free to directly contact me or the chemist(s) who performed the testing in question. Unless otherwise requested, we will dispose of the sample(s) 30 days from the sample receipt date.

We appreciate this opportunity to be of service and look forward to your continued patronage.

Sincerely,

Lorraine Olashaw, Lab Director

Samples were properly preserved and the pH measured when applicable unless otherwise noted. Analysis of solids for pH, Flashpoint, Ignitibility, Paint Filter, Corrosivity, Conductivity and Specific Gravity are reported on an "as received" basis.

Immediate analyses, pH, Total Residual Chlorine, Dissolved Oxygen and Sulfite, performed at the laboratory were run outside of the recommended 15 minute hold time.

All results contained in this report relate only to the above listed samples.

TEF: Toxicity Equivalent Factor

TEQ: Toxicity Equivalence to Benzo[a]pyrene

The TEF factors set forth in this report are taken from the following EPA document: "Mid- Atlantic Risk Assessment User's Guide: November 2013". This guidance document sets forth a recommended, but not mandatory approach based upon currently available information with respect to risk assessment for response actions at CERCLA sites. This document does not establish binding rules. This document contains the most current TEF values per VT IROCP.

The TEF factors set forth in this report are taken from the following EPA document: "Mid- Atlantic Risk Assessment User's Guide: November 2013". This guidance document sets forth a recommended, but not mandatory approach based upon currently available information with respect to risk assessment for response actions at CERCLA sites. This document does not establish binding rules. This document contains the most current TEF values per VT IROCP.

p-Terphenyl-D14 (surr)	70 %R	77 %R	81 %R	9/22/2015	mg/kg	30 - 130		8270D

Samples were extracted and analyzed within holding time limits.

Instrumentation was calibrated in accordance with the method requirements.

The method blanks were free of contamination at the reporting limits.

Sample surrogate recoveries met the above stated criteria.

The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.

There were no exceptions in the analyses, unless noted.

*! Flagged analyte recoveries deviated from the QA/QC limits. Unless noted below, flagged analytes that exceed acceptance limits in the Quality Control sample were not detected in the field samples.

PCB-1260	< 0.02	0.11 (84 %R)	0.11 (82 %R) (2 RPD)	9/24/2015	mg/kg	40 - 140	30	8082
PCB-1262	< 0.02	< 0.02 (%R N/A)	< 0.02 (%R N/A) (RPD)	9/24/2015	mg/kg			8082
PCB-1268	< 0.02	< 0.02 (%R N/A)	< 0.02 (%R N/A) (RPD)	9/24/2015	mg/kg			8082
TMX (surr)	92 %R	94 %R	92 %R	9/24/2015	% Rec	30 - 150	30	8082
DCB (surr)	87 %R	88 %R	86 %R	9/24/2015	% Rec	30 - 150	30	8082

Samples were extracted and analyzed within holding time limits.

Instrumentation was calibrated in accordance with the method requirements.

The method blanks were free of contamination at the reporting limits.

Sample surrogate recoveries met the above stated criteria.

The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.

There were no exceptions in the analyses, unless noted.

*! Flagged analyte recoveries deviated from the QA/QC limits. Unless noted below, flagged analytes that exceed acceptance limits in the Quality Control sample were not detected in the field samples.

QC REPORT

EAI ID#: 148121

Client: **The Johnson Company**

Client Designation: **Leddy Park Burlington, VT**

Parameter Name	Blank	LCS	LCSD	Units	Date of Analysis	Limits	RPD	Method
Lead	< 0.5	40 (99 %R)		mg/kg	9/22/15	80 - 120	20	6020

Samples were analyzed within holding times unless noted on the sample results page.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
The associated matrix spikes and/or Laboratory Control Samples met the above stated criteria.
Exceptions to the above statements are flagged or noted above or on the QC Narrative page.
*! Flagged analyte recoveries deviated from the QA/QC limits.

Eastern Analytical, Inc.

J. Kurt Muller
The Johnson Company
100 State Street
Montpelier, VT 05602

Subject: Laboratory Report

Eastern Analytical, Inc. ID: 148158
Client Identification: Waterfront Park | 3-3049-03
Date Received: 9/18/2015

Dear Mr. Muller :

Enclosed please find the laboratory report for the above identified project. All analyses were performed in accordance with our QA/QC Program. Unless otherwise stated, holding times, preservation techniques, container types, and sample conditions adhered to EPA Protocol. Samples which were collected by Eastern Analytical, Inc. (EAI) were collected in accordance with approved EPA procedures. Eastern Analytical, Inc. certifies that the enclosed test results meet all requirements of NELAP and other applicable state certifications. Please refer to our website at www.eailabs.com for a copy of our NELAP certificate and accredited parameters.

The following standard abbreviations and conventions apply to all EAI reports:

- Solid samples are reported on a dry weight basis, unless otherwise noted
- < : "less than" followed by the reporting limit
- > : "greater than" followed by the reporting limit
- %R : % Recovery

Eastern Analytical Inc. maintains certification in the following states: Connecticut (PH-0492), Maine (NH005), Massachusetts (M-NH005), New Hampshire/NELAP (1012), Rhode Island (269) and Vermont (VT1012).

The following information is contained within this report: Sample Conditions summary, Analytical Results/Data, Quality Control data (if requested) and copies of the Chain of Custody. This report may not be reproduced except in full, without the the written approval of the laboratory.

If you have any questions regarding the results contained within, please feel free to directly contact me or the chemist(s) who performed the testing in question. Unless otherwise requested, we will dispose of the sample(s) 30 days from the sample receipt date.

We appreciate this opportunity to be of service and look forward to your continued patronage.

Sincerely,

Lorraine Olashaw, Lab Director

SAMPLE CONDITIONS PAGE

EAI ID#: 148158

Client: **The Johnson Company**

Client Designation: **Waterfront Park | 3-3049-03**

Temperature upon receipt (°C): **3.1**

Received on ice or cold packs (Yes/No): **Y**

Acceptable temperature range (°C): 0-6

Lab ID	Sample ID	Date Received	Date Sampled	Sample Matrix	% Dry Weight	Exceptions/Comments (other than thermal preservation)
148158.01	MW-01	9/18/15	9/18/15	aqueous		Adheres to Sample Acceptance Policy
148158.02	MW-02	9/18/15	9/18/15	aqueous		Adheres to Sample Acceptance Policy
148158.03	MW-Dup	9/18/15	9/18/15	aqueous		Adheres to Sample Acceptance Policy
148158.04	MW-EB-01	9/18/15	9/18/15	aqueous		Adheres to Sample Acceptance Policy

Samples were properly preserved and the pH measured when applicable unless otherwise noted. Analysis of solids for pH, Flashpoint, Ignitibility, Paint Filter, Corrosivity, Conductivity and Specific Gravity are reported on an "as received" basis.

Immediate analyses, pH, Total Residual Chlorine, Dissolved Oxygen and Sulfite, performed at the laboratory were run outside of the recommended 15 minute hold time.

All results contained in this report relate only to the above listed samples.

DCB (surr)	108 %R	97 %R	97 %R	9/21/2015	% Rec	30 - 150	20	8082

Samples were extracted and analyzed within holding time limits.

Instrumentation was calibrated in accordance with the method requirements.

The method blanks were free of contamination at the reporting limits.

Sample surrogate recoveries met the above stated criteria.

The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.

There were no exceptions in the analyses, unless noted.

*! Flagged analyte recoveries deviated from the QA/QC limits. Unless noted below, flagged analytes that exceed acceptance limits in the Quality Control sample were not detected in the field samples.

Subject: Laboratory Report

Eastern Analytical, Inc. ID: 148138
Client Identification: Waterfront Park Burlington, VT
Date Received: 9/17/2015

Dear Mr. Matt :

Enclosed please find the laboratory report for the above identified project. All analyses were performed in accordance with our QA/QC Program. Unless otherwise stated, holding times, preservation techniques, container types, and sample conditions adhered to EPA Protocol. Samples which were collected by Eastern Analytical, Inc. (EAI) were collected in accordance with approved EPA procedures. Eastern Analytical, Inc. certifies that the enclosed test results meet all requirements of NELAP and other applicable state certifications. Please refer to our website at www.eailabs.com for a copy of our NELAP certificate and accredited parameters.

The following standard abbreviations and conventions apply to all EAI reports:

- Solid samples are reported on a dry weight basis, unless otherwise noted
- < : "less than" followed by the reporting limit
- > : "greater than" followed by the reporting limit
- %R : % Recovery

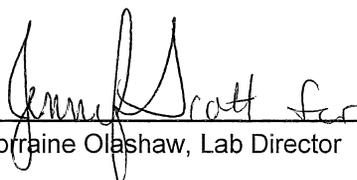

Eastern Analytical Inc. maintains certification in the following states: Connecticut (PH-0492), Maine (NH005), Massachusetts (M-NH005), New Hampshire/NELAP (1012), Rhode Island (269) and Vermont (VT1012).

The following information is contained within this report: Sample Conditions summary, Analytical Results/Data, Quality Control data (if requested) and copies of the Chain of Custody. This report may not be reproduced except in full, without the the written approval of the laboratory.

If you have any questions regarding the results contained within, please feel free to directly contact me or the chemist(s) who performed the testing in question. Unless otherwise requested, we will dispose of the sample(s) 30 days from the sample receipt date.

We appreciate this opportunity to be of service and look forward to your continued patronage.

Sincerely,

Lorraine Olashaw, Lab Director

Samples were properly preserved and the pH measured when applicable unless otherwise noted. Analysis of solids for pH, Flashpoint, Ignitibility, Paint Filter, Corrosivity, Conductivity and Specific Gravity are reported on an "as received" basis.

Immediate analyses, pH, Total Residual Chlorine, Dissolved Oxygen and Sulfite, performed at the laboratory were run outside of the recommended 15 minute hold time.

All results contained in this report relate only to the above listed samples.

TEF: Toxicity Equivalent Factor

TEQ: Toxicity Equivalence to Benzo[a]pyrene

The TEF factors set forth in this report are taken from the following EPA document: "Mid- Atlantic Risk Assessment User's Guide: November 2013". This guidance document sets forth a recommended, but not mandatory approach based upon currently available information with respect to risk assessment for response actions at CERCLA sites. This document does not establish binding rules. This document contains the most current TEF values per VT IROCP.

LABORATORY REPORT

EAI ID#: 148138

Client: **The Johnson Company**

Client Designation: **Waterfront Park Burlington, VT**

Client Sample ID: SB-28 (1.0)
 Lab Sample ID: 148138.55
 Matrix: soil
 Date Sampled: 9/17/15
 Date Received: 9/17/15
 Date Prepared: 9/21/15
 Units: mg/kg
 Method: 8270D
 Analyst: JMR

	Results	Dilution Factor	Date Analyzed	TEF	TEQ
Naphthalene	0.47	1	9/22/15		
2-Methylnaphthalene	0.30	1	9/22/15		
Acenaphthylene	0.054	1	9/22/15

p-Terphenyl-D14 (surr)	85 %R	90 %R	84 %R	9/18/2015	% Rec	33 - 130	20	8270D

Samples were extracted and analyzed within holding time limits.

Instrumentation was calibrated in accordance with the method requirements.

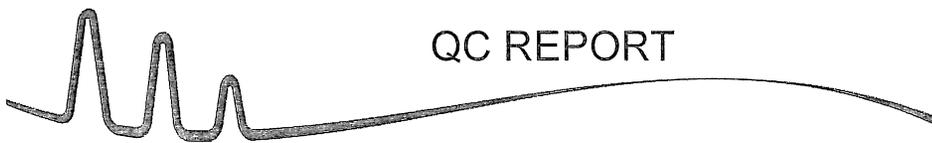

The method blanks were free of contamination at the reporting limits.

Sample surrogate recoveries met the above stated criteria.

The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.

There were no exceptions in the analyses, unless noted.

*! Flagged analyte recoveries deviated from the QA/QC limits. Unless noted below, flagged analytes that exceed acceptance limits in the Quality Control sample were not detected in the field samples.

Acid clean-up was performed on the samples and associated batch QC.

Additional Sulfur clean-up was performed on SB-30 (2.0) and associated batch QC.

SB-32 (0.7): PCB-1254 and PCB-1260 result obtained from a 4X dilution analyzed on 9/29/2015.

DCB (surr)	108 %R	97 %R	97 %R	9/21/2015	% Rec	30 - 150	20	8082

Samples were extracted and analyzed within holding time limits.

Instrumentation was calibrated in accordance with the method requirements.

The method blanks were free of contamination at the reporting limits.

Sample surrogate recoveries met the above stated criteria.

The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.

There were no exceptions in the analyses, unless noted.

*! Flagged analyte recoveries deviated from the QA/QC limits. Unless noted below, flagged analytes that exceed acceptance limits in the Quality Control sample were not detected in the field samples.

The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.

There were no exceptions in the analyses, unless noted.

*! Flagged analyte recoveries deviated from the QA/QC limits. Unless noted below, flagged analytes that exceed acceptance limits in the Quality Control sample were not detected in the field samples.

QC REPORT

EAI ID#: 148138

Client: **The Johnson Company**

Batch ID: 635790-38454/S092815PCB1

Client Designation: **Waterfront Park Burlington, VT**

Parameter Name	Blank	LCS	LCSD	Analysis Date	Units	Limits	RPD	Method
PCB-1016	< 0.02	0.14 (108 %R)	0.14 (105 %R) (3 RPD)	9/29/2015	mg/kg	40 - 140	30	8082
PCB-1221	< 0.02	< 0.02 (%R N/A)	< 0.02 (%R N/A) (RPD)	9/29/2015	mg/kg			8082
PCB-1232	< 0.02	< 0.02 (%R N/A)	< 0.02 (%R N/A) (RPD)	9/29/2015	mg/kg			8082
PCB-1242	< 0.02	< 0.02 (%R N/A)	< 0.02 (%R N/A) (RPD)	9/29/2015	mg/kg			8082
PCB-1248	< 0.02	< 0.02 (%R N/A)	< 0.02 (%R N/A) (RPD)	9/29/2015	mg/kg			8082
PCB-1254	< 0.02	< 0.02 (%R N/A)	< 0.02 (%R N/A) (RPD)	9/29/2015	mg/kg			8082
PCB-1260	< 0.02	0.13 (94 %R)	0.12 (90 %R) (4 RPD)	9/29/2015	mg/kg	40 - 140	30	8082
PCB-1262	< 0.02	< 0.02 (%R N/A)	< 0.02 (%R N/A) (RPD)	9/29/2015	mg/kg			8082
PCB-1268	< 0.02	< 0.02 (%R N/A)	< 0.02 (%R N/A) (RPD)	9/29/2015	mg/kg			8082
TMX (surr)	106 %R	107 %R	102 %R	9/29/2015	% Rec	30 - 150	30	8082
DCB (surr)	94 %R	98 %R	93 %R	9/29/2015	% Rec	30 - 150	30	8082

Samples were extracted and analyzed within holding time limits.

Instrumentation was calibrated in accordance with the method requirements.

The method blanks were free of contamination at the reporting limits.

Sample surrogate recoveries met the above stated criteria.

The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.

There were no exceptions in the analyses, unless noted.

*! Flagged analyte recoveries deviated from the QA/QC limits. Unless noted below, flagged analytes that exceed acceptance limits in the Quality Control sample were not detected in the field samples.

DRAFT

JEM #6
 Leddy Park Stockpile Date 9-14-15
 Burlington, VT

JEM - Seren, Matt

(N)

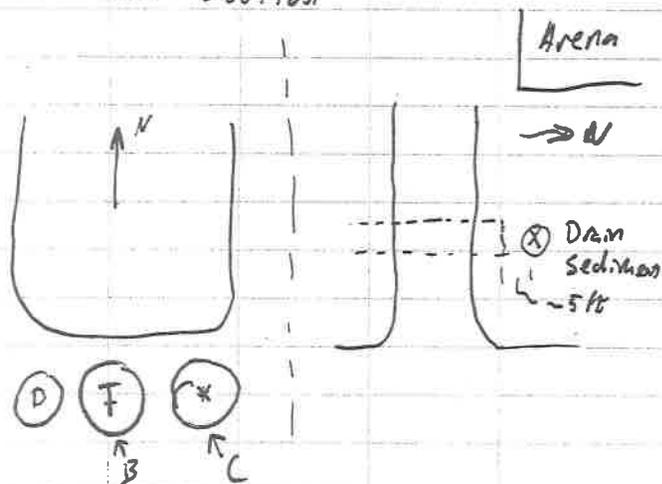

10:00 - JEM onsite

Overcast, light drizzle, calm, ~65°F

- stockpile A - 180 ft long (meas. w/ 300 ft tape)

↳ each section ~ 30 ft long edge (9-14-15)

↳ Part marks @ Approx center of each section

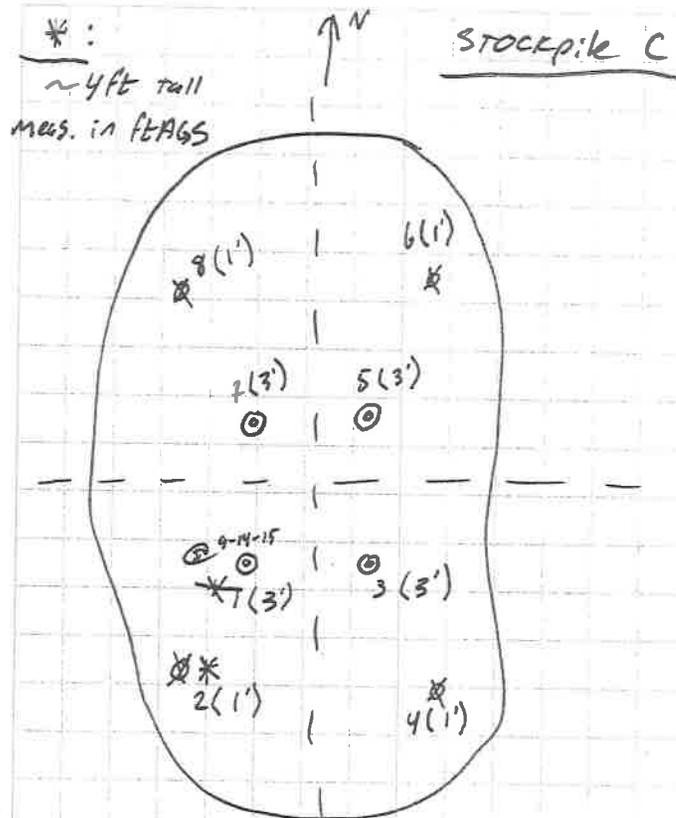

ft APS - ft above parking lot surface
 ft bss - ft below ground surface

11:00 - collect Drain Sediment (PCBs) from ~5 ft north of N. end of culvert from ~0-0.5 ft bss fine gravel/sand w/ organic silt/muck. Organic odor.

JEM #6
 Location Leddy Park Stockpile Date 9-14-15
 Project / Client Burlington, VT

(N)

* - Dup collected from Loc. 2 @ false time (12:00) 9-14-15

Location Burlington, VT

Date 9-14-15Project / Client Ledd's Park

Ⓜ

D:

~3 ft tall
meas. in ft AGS

N

Stockpile D

* Dup collected from locn #8 @ 12:03

Decon: Alconox, DI Rinse, wipe w/
Hexane-soaked paper towel @ truck
tailgate. no drips/spills of hexane

16:15 - gate close hence i off-site

Burlington, VT
Ledy Park

JEM #6

Date 9-15-15

JEM - Jeremy Mott / SIM - Kurt Muller / Dals - Paul Dals

7:40 - JEM onsite open fence, dig field

Supplies
Clear, calm, ~70°F

8:00 - JEM onsite

↳ open plastic, prep for ramp

CONSTRUCTION

8:30 - Dals onsite, Begin Ramp const.

9:10 - collect ~~FB~~^Q FB-SP-01 @ 9:10
over decanned hand Auger

Dups:

SB-A-Dup-01 from SP-A-09 @ 1200

Typical Soil Characteristics -

Drk Brn med/fine sand w/ some SR
gravel No odor, some organic
material present

SB-A-Dup 02 from SP-A-30 @ 1201

SB-A-Dup 03 from SP-A-44 @ 1202

1600 - JEM / SIM / Dals offsite

Burlington, VT
Ledy Park

JEM #6

Date 9-16-15

Project / Client

JEM - Jeremy Mott / EAI - Eastern Analytical

9:00 - JEM onsite

clear, 15 breeze, ~70°F

repackage, re-ice samples, open
fence, peel back plastic

9:10 - EAI drills onsite

SP-A-Dup-04 collected from

SP-A-61 (13.5) @ false time
1200

SP-A-Dup-05 collected from SP-A-90 (1.5)

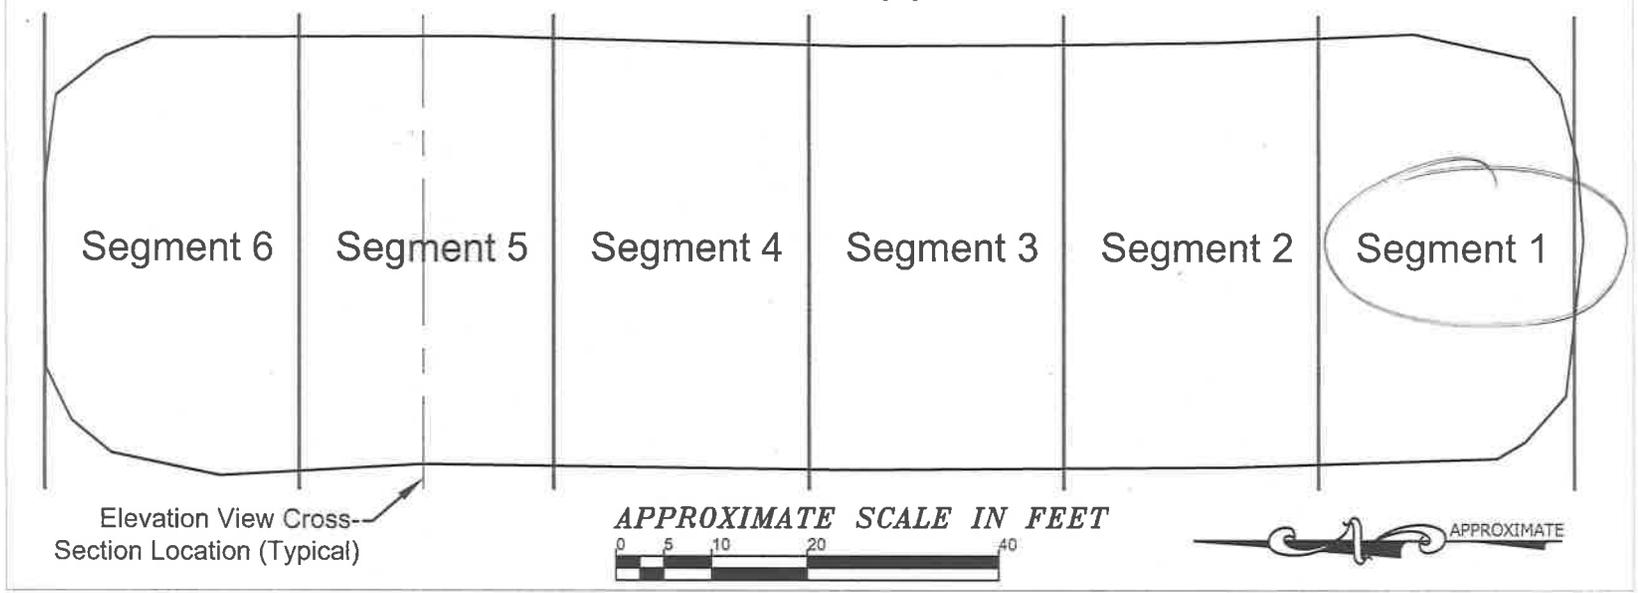

@ false time 12:01

recover pile A

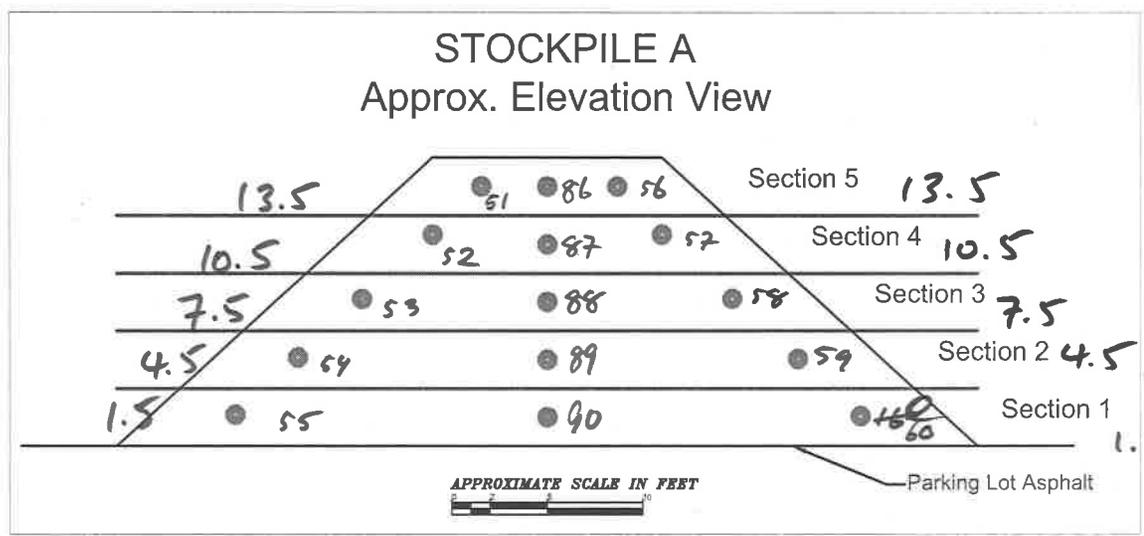

14:30 - EAI offsite

SSV: VT DEC Soil Screening Value reflective of the US EPA Regional Screening Levels from January 2015
Industrial SSV: De minimus carcinogenic risk level of exposure to soils over a 70 year residential exposure duration.
Residential SSV: De minimus carcinogenic risk level of exposure to soils over a 30 year residential exposure duration.

Bold Values: Exceed the Residential SSV

Standard Values: Exceeds the VT DEC Industrial SSV

ND: Not detected above the indicated value

t: Laboratory results for a TCLP extraction.
