Re: Phase I Environmental Site Assessment
501 Pine Street
Burlington, Vermont 05401
DEC SMS #2020-7419

Dear Mr. Bradley:

Nobis Engineering, Inc. d/b/a Nobis Group® (Nobis) is pleased to provide this Phase I Environmental Site Assessment for the property identified as 501 Pine Street – Gatehouse Lot (Map ID 053-1-001-000) located in Burlington, Vermont (the Site; target property).

The work described herein was performed in accordance with the Work Plan & Cost Estimate dated September 29, 2020. The work was completed under Nobis' agreement with VTDEC Contract #39098 (as executed on October 25, 2019) for completing Targeted Brownfields Assessment assignments (VTDEC TBA Contract).

Please do not hesitate to contact the undersigned if you have any questions regarding this submittal.

Sincerely,

NOBIS GROUP®

Dylan Bush
Project Geologist

Clarence "Tim" Andrews, P.G.
Program Manager

EXECUTIVE SUMMARY

Nobis Engineering, Inc. d/b/a Nobis Group® (Nobis) has completed a Phase I Environmental Site Assessment (ESA) of the parcel located at 501 Pine Street in Burlington, Chittenden County, Vermont (target parcel). The target parcel is identified by the City of Burlington Assessor's office as Parcel No. 053-1-001-000. Research completed as part of this assessment has revealed that the target parcel is currently included in the Pine Street Canal Superfund Site boundary and is subject to institutional controls.

The target parcel is comprised of a 5,400 square feet area, or 0.12-acres, and is currently owned by Vermont Gas Systems, Inc. of South Burlington, Vermont. The parcel is situated in a mixed-use commercial and residential area along Pine Street with an apartment building to the east, vacant and undeveloped land to the north, with commercial properties farther north. The Pine Street Canal and associated wetlands are situated to the west with Lake Champlain farther west. The Burlington Electric Co. is situated to the south of the target parcel with industrial properties farther south.

Historical data including topographic maps, aerial photographs, directories, and municipal records suggest that a portion of the target parcel was initially developed as part of a manufactured gas plant (MGP) in the late 1890s. Historical figures show purifying and compressing areas as having existed on the target parcel. The MGP reportedly operated from initial construction of the plant until circa 1966. The plant was historically operated by the Burlington Gas Light Co., Burlington Gas Works, the Green Mountain Power Corp., and Vermont Gas Systems.

The coal gasification process conducted at the Pine Street plant reportedly used wood chips as a filter media in the production of manufactured gas. Once the wood chips were saturated with petroleum product, they were reportedly disposed of at the plant and used to fill in the wetland area behind the plant. Other plant wastes included coal tar, fuel oil, cyanide, iron oxide, cinders, and metals. Disposal activities reportedly took place from the initiation of operations through 1966. Vermont Gas Systems, the plant owner at that time, ceased operations of the Pine Street MGP in 1966, and dismantled the plant in 1967. Disposal practices at the former MGP have impacted the surrounding properties and the Pine Street Canal with coal gasification waste products.

The Pine Street Canal area was initially investigated by the Vermont Agency of Transportation (AOT) for the Southern Connector Highway project. The highway was proposed to run through portions of the Pine Street Canal area. A subsurface exploration program revealed extensive

contamination beneath properties in the proposed project area. In some areas, coal tar was found to be up to ten-feet thick at the bottom of the wetland. According to historical reports, the State of Vermont nominated the Pine Street Canal Site as a candidate for the United States Environmental Protection Agency (EPA) Superfund program in 1981. The Site was later listed as a Superfund Site on September 8, 1983. The State of Vermont reclassified groundwater under much of the Site to Class IV, which prohibits its use as a potable drinking water source in 1993.

The EPA identified potentially responsible parties (PRPs) who owned portions of the Superfund Site, were former owners or operators of the MGP, or had succeeded to the liability of former operators of the MGP, of their potential liability and responsibility for cost of environmental response actions under CERCLA in 1987, 1988, and 1992. In December 1988 EPA filed suit against three (3) former owners and/or operators of the MGP from 1930-1968. According to historical reports, additional parties were brought into the suit by the original defendants. A settlement was reached in December 1990 where EPA recovered costs from CERCLA response actions and could seek the cost of future response actions from the parties.

Through several investigations, EPA characterized the wastes as residuals from the coal gasification process. The wastes include aromatic hydrocarbons such as benzene, toluene, ethylbenzene, and xylene (BTEX compounds); polycyclic aromatic hydrocarbons (PAHs) in the form of light and heavy tars; and cyanides and sulfur compounds. MGP wastes also include several inorganics including aluminum, antimony, cobalt, nickel, iron, titanium, manganese, arsenic, lead, chromium, copper, vanadium, zinc, cadmium, molybdenum, and selenium. The investigations revealed that PAHs are the most ubiquitous contaminants at the Site. The primary source of contaminants is the extensive area of non-aqueous phase liquid (NAPL) beneath the canal and wetlands to the west of the former MGP. According to EPA documentation, MGP wastes are the primary source of contamination at the Site.

EPA released a proposed cleanup plan in May 1998 that was ultimately adopted as the remedy for the Site. The Record of Decision (ROD) for the Site was issued on September 29, 1998. The selected remedy for the Site provides for:

- capping of contaminated soil;
- Site boundary definition;
- institutional controls for groundwater below the Site;
- institutional controls for land-use development;
- long-term performance monitoring, and;
- five-year reviews.

The remedy has been implemented at the Site, with two (2) Explanations of Significant Differences over the course of the project. The Site is currently subject to five-year reviews; the

third, and most recent was completed on December 19, 2016. Compliance monitoring is ongoing and conducted multiple times per year and includes canal inspections, NAPL gauging and bailing, and groundwater sampling.

Pursuant to the remedy outlined above, the target parcel is subject to the following land-use restrictions (institutional controls):

- The parcel will not be used for residential or child day care centers;
- Groundwater under the parcel shall not be used for potable drinking water and industrial production wells will not be permitted where free phase contamination is present;
- The parcel will not be used to interfere with environmental investigations or cause contamination or re-contamination of adjacent properties;
- No activities that will change hydrogeologic conditions that would cause migration of contaminated ground water to Lake Champlain will be allowed, and;
- Excavations of greater than 5 feet below ground surface will generally be prohibited with the exception of existing utility repair or replacement, drilling, driving, or boring piles, if contaminant concentrations are below 140 mg/kg total PAH, and workers use proper personal protective equipment.

The Jackson Terrace Apartments property located at 500 Pine Street is listed as a former State Hazardous Waste Site (SHWS) and is located hydrogeologically upgradient of the target parcel. Initial environmental investigations at the property revealed the presence of polycyclic aromatic hydrocarbon (PAH) compounds and total petroleum hydrocarbons (TPH) in groundwater beneath the northern portion of the site. Specifically, a groundwater exceedance for benzo[a]pyrene was reported.

A subsequent investigation at the Jackson Terrace property indicated the presence of several PAH compounds at concentrations above VTDEC Soil Screening Values (SSVs). TPH-diesel range organic (TPH-DRO) compounds were detected, but the reported concentrations were below applicable SSVs. Groundwater analytical data did not indicate the presence of contaminants above laboratory method detection limits. VTDEC issued a Site Management Activities Closed letter (SMAC) on March 31, 2017 for the site and closed the regulatory file.

Nobis has completed a Phase I Environmental Site Assessment of the 501 Pine Street parcel in Burlington, Vermont. This work was performed within the context of ASTM E 1527-13, “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process”. Any exceptions to, or deviations from, this practice are described in Sections 1.4 and 10.0. This assessment has revealed evidence of one (1) *Historical Recognized Environmental*

Conditions (Historical REC), one (1) Controlled Environmental Conditions (Controlled REC), and one (1) Recognized Environmental Condition (REC) relative to the target parcel.

- *Historical REC:* Former SHWS site across Pine Street to the east that had documented exceedances of PAHs in soil and groundwater. The SHWS site is hydrogeologically upgradient relative to the target parcel with a closed regulatory status and is considered a *Historical REC*.
- The target parcel is included within the Pine Street Canal Superfund Site, which has significant thicknesses of NAPL and high concentrations of PAHs within soil and groundwater. The properties within the Superfund Site boundary are subject to institutional controls limiting land-use and groundwater use as detailed above. Given the adverse impacts to the environment in the vicinity of the target parcel, the Pine Street Canal Superfund Site is considered a *Controlled REC* relative to the target parcel.
- Numerous environmental investigations have been conducted to fully characterize the contamination and location of NAPL within the Pine Street Canal Superfund Site boundary; however, to the best of our knowledge, environmental investigations have not been carried out on the target parcel. The lack of environmental data in relation to the environmental conditions on and beneath the target parcel considering historic property use as purifying, compressing, and production areas within the former MGP present a data gap and *REC* relative to the target parcel.

1.0 INTRODUCTION

Nobis Engineering, Inc. d/b/a Nobis Group® (Nobis) has completed a Phase I Environmental Site Assessment (ESA) for the parcel identified by the City of Burlington Assessor's office as Parcel No. 053-1-001-000 located in Burlington, Chittenden County, Vermont (target parcel). This work was performed in compliance with ASTM E 1527-13, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process". This Phase I ESA was completed as part of due diligence requirements ahead of potential redevelopment.

1.1 Purpose

The objective of this Phase I ESA was to assess environmental conditions at the target parcel and vicinity for RECs associated with the presence of *petroleum products* or *hazardous substances* in conformance with ASTM E 1527-13, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process". RECs are defined in ASTM Standard Practice E 1527-13 as:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

No ASTM non-scope items are included as part of this Phase I ESA.

1.2 Detailed Scope-of-Services

To meet the objectives of the Phase I ESA, Nobis performed the following tasks:

- Reviewed Vermont Department of Environmental Conservation (VTDEC) and United States Environmental Protection Agency (EPA) regulatory database listings concerning environmental conditions at, and in the vicinity of the target parcel, as provided by Environmental Data Resources, Inc. (EDR).
- Contacted officials of the City of Burlington, Vermont to obtain information pertaining to present and historical environmental conditions at the target parcel and adjacent environs.
- Reviewed available history of ownership and land usage records and interviewed persons with knowledge of the target parcel to obtain past usage information.

- Reviewed available aerial photographs and/or topographic maps to aid in assessing local geology and in assessing past and present land use at the target parcel and vicinity.
- Visited the target parcel on October 21, 2020 to assess surficial and general environmental conditions at the target parcel and adjacent environs for evidence of RECs associated with past or present *petroleum product* or *hazardous substance* handling or storage activities.
- Prepared this report summarizing the results of the assessment.

1.3 Significant Assumptions

It is assumed that federal, state, and local records are generally complete and current. The preparer assumes that all individuals contacted and/or interviewed during the preparation of this Phase I ESA have responded in good faith. Nobis is entitled to rely on all information gathered during this scope of work.

1.4 Limitations and Exceptions

This Phase I ESA is intended to assess the target parcel for significant environmental issues. It is not intended as a guidance document for potential future remedial action. In addition, this ESA is subject to the limitations included in Appendix A.

1.5 Special Terms and Conditions

No special terms or conditions apply to this project.

1.6 User Reliance

This Phase I ESA has been prepared exclusively for the use of Vermont DEC Site Management Section (SMS) and Mr. Kurt Schueler doing business as KS Pine LLC. With the exception of release to any third party by Nobis or the Client(s), reliance on this report is for informational purposes only. Nobis makes no warranties to person(s) or entity(ies) other than the Client(s) to rely on the information provided in this report. Any person(s) or entity(ies) wishing to use this information shall do so with the written permission of Nobis and the contract for which it is intended. Prior approval from Nobis is required for disclosure of information obtained in this report.

Continued viability of this report is subject to ASTM E 1527-13 Sections 4.6 and 4.8. If this ESA will be used by a different user(s) (third party) than the user(s) for whom the ESA was originally prepared, the third party must also satisfy the user(s) responsibilities in Section 6 of ASTM E 1527-13.

1.7 User Obligations

As defined in ASTM E 1527-13, the user responsibilities are as follows:

- Check title records for environmental liens and activity and use restrictions.
- Disclose specialized knowledge and experience.
- Explain why the purchase price is below market value, if it is discounted.
- Answer interview questions in good faith.
- Provide information as outlined in Section 6 of ASTM E 1527-13 including completing the User Questionnaire.

For the purpose of this ESA, the *user* is identified as KS Pine LLC. A representative of the *user* provided the information required under Section 3.0, as well as responses to the User Questionnaire.

1.8 Data Gaps

Efforts were made by Nobis to obtain *user* provided information and review all reasonably ascertainable resources to determine historical uses of the target parcel and surrounding properties to identify the possibility of RECs in connection with the target parcel. Objectives are completed within the framework of research outlined above; however, data failure(s) may be encountered. As defined by ASTM, data failure(s) or data gaps occur when historical research is reasonably ascertained and reviewed, but the intended objectives have not been met.

Nobis has also completed an evaluation of the significance of missing information and limitations with respect to the findings, and where appropriate, significant data gaps are identified and discussed in the body of the report. However, it should be noted that an evaluation of significant data gaps is based on the information available at the time of report submission, and an evaluation of information once a report has been submitted could result in an alteration of our conclusions, recommendations and/or opinions.

Based on the data collected for this assessment, one (1) data gap was encountered during the completion of this Phase I ESA and include:

- Documents from Burlington Municipal Offices were not obtained as the municipal offices were closed on the date of the field reconnaissance. Nobis submitted public information requests to select municipal offices; however, the departments have not responded by the writing of this report.

Although the above is considered a data gap and could be considered a REC associated with the target parcel; based on the documented history of the target parcel discussed in this assessment,

this data gap is not considered significant and did not impede or interfere with the conclusions or recommendations made as part of this assessment.

2.0 TARGET PARCEL DESCRIPTION

2.1 Location and Legal Description

The target parcel is located at 501 Pine Street in Burlington, Chittenden County, Vermont, and is identified by the City of Burlington as Parcel No. 053-1-001-000. According to the City of Burlington Assessor's records, the parcel is comprised of 5,400 square feet, or 0.12-acres, and is currently owned by Vermont Gas Systems, Inc. of South Burlington, Vermont.

A Locus Plan is provided as Figure 1 and a Site Sketch is provided as Figure 2. Area features are shown on Figure 3. Photographs taken during the inspection are provided on Figure 4.

2.2 Previous Environmental Investigations

Previous environmental investigations of the target parcel were not identified during this Phase I ESA; however, environmental investigations have been conducted on adjoining and area properties in relation to the Pine Street Canal Superfund Site. Environmental documents were reviewed on the Pine Street Canal Superfund Site's webpage.

2.3 Site and Vicinity General Characteristics

The target parcel is located at 501 Pine Street in Burlington, Chittenden County, Vermont and is comprised of a 0.12-acre parcel, identified on Burlington Tax Map 053-1 as Lot 001. The target parcel is currently vacant and undeveloped. Topography on the target parcel is generally level and is at a similar elevation as Pine Street. An area of slightly lower elevation exists on the southern portion of the lot.

Based on Burlington Zoning data, as available on the Vermont Open Geodata Portal geographic information systems (GIS) viewer, the target parcel lies within the Enterprise – Light Manufacturing zone. The lot abutting the target parcel to the north, west and south also lies within the Enterprise – Light Manufacturing zone. Parcels farther north and south are similarly zoned. Parcels farther west are zoned as RCO – Conservation. The parcel to the east across Pine Street is residential in nature and lies within the Residential – Low Density zone. Parcels farther east are similarly zoned. Generally, the vicinity is comprised of commercial and residential properties to the south and east, respectively. Vacant lands exist to the north and west, and aside from parcel 053-1-003-001, they are generally part of the Pine Street Canal Superfund Site.

2.4 Current Use of the Site

The target parcel is currently vacant land and is not utilized by the current property owner.

2.5 Descriptions of Structures, Roads, Other Improvements on Site

The target parcel is not developed, improvements to the site have not been made.

2.6 Current Use of Adjoining Properties

The target parcel is bounded to the north, west, and south by parcel 053-1-002-000, which is currently vacant, undeveloped, and is also part of the Pine Street Canal Superfund Site. The target parcel is bounded by the Pine Street right-of-way to the east with the Jackson Terrace apartment building farther east across Pine Street. The property farther north is also vacant and undeveloped land; however, it is not part of the Superfund Site. The parcel farther west is vacant and undeveloped wetland. The property farther south is occupied by The Burlington Electric Department.

2.7 Target Parcel Physical Setting

The target parcel is depicted on the U.S. Geological Survey (USGS) Burlington – Vermont – 1987 7.5-minute topographic quadrangle at an elevation of approximately ± 100 -feet referenced to the National Geodetic Vertical Datum of 1929 (NGVD 29).

Bedrock beneath the target parcel is comprised of the Monkton Quartzite, a reddish brown, pebbly, thin- to thick-bedded sandstone, orangey-gray- and buff-weathering well bedded dolostone, and reddish-brown weathering dolomitic quartzite (Ratcliffe, N.M., Stanley, R.S., Gale, M.H., Thompson, P.J., and Walsh, G.J., 2011, Bedrock geologic map of Vermont: U.S. Geological Survey Scientific Investigations Map 3184, 3 sheets, scale 1:100,000).

The target parcel is located on the National Flood Insurance Program Flood Insurance Rate Map (FIRM) for Chittenden County, Vermont – Map Number 50007C0254D, effective July 18, 2011. The FIRM image was available in the Federal Emergency Management Agency (FEMA) online database and was reviewed as part of this assessment. The map depicts the target parcel in Zone X, an area determined to be outside the 0.2% annual chance floodplain.

3.0 USER PROVIDED INFORMATION

Mr. Kurt Schueler, a representative of the *User*, *KS Pine LLC*, responded to a User Questionnaire. The completed questionnaire is attached in Appendix D.

3.1 Environmental Liens

The *user* is not aware of any environmental liens for the target parcel.

3.2 Activity and Use Restrictions

Mr. Schueler indicated that he was not aware of activity and use limitations (AULs) for the target parcel on the submitted questionnaire. We note, VTDEC has made Mr. Schueler aware of the AULs associated with the property.

3.3 Specialized Knowledge

The *user* does not possess any specialized knowledge of the target parcel.

3.4 Valuation Reduction for Environmental Issues

The *user* indicated that the price is considering contamination.

3.5 Commonly Known or Reasonably Ascertainable Information

The *user* indicated that they are unaware of the past uses of the target parcel.

3.6 Obviousness of Presence of Contamination

The *user* is not aware of any obvious indicators of contamination at the target parcel.

3.7 Reason for Performing Phase I

The *user* cited assessment of potential environmental impacts as requested by VTDEC as the reason for performing this Phase I ESA.

3.8 Other

The *user* provided no other additional information on the target parcel.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources

As part of this ESA, state and federal environmental records were reviewed in the form of an environmental database report provided by EDR. A copy of the database report is included as

Appendix B. Information was also obtained from other local municipal and state records. The following is a summary of significant findings from this review:

Federal and State Regulatory Agencies

EPA National Priority List (NPL)

The EPA's NPL is a list of confirmed or proposed Superfund facilities. The target parcel was not identified as an NPL facility.

One NPL facility was identified within a ± 1.0 -mile radius of the target parcel and is identified as Pine Street Canal. We note, the target parcel is considered part of the Pine Street Canal Superfund Site and is discussed in further detail in Section 4.2 below.

Federal Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List

The CERCLIS database is a listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the CERCLIS Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities. The target parcel was not identified as a CERCLIS facility.

Three (3) CERCLIS facilities were identified within a ± 0.5 -mile radius of the target parcel. The listed facilities are identified as the Pine Street Canal, Bell Aircraft Dump, and General Dynamics Armament Systems. The listed facilities are located at Pine Street, Lakeside Avenue, and 128 Lakeside Avenue, respectively. We note, the target parcel is included as part of the Pine Street Canal Superfund Site. The Pine Street Canal, Bell Aircraft Dump, and General Dynamics Armament Systems sites are discussed in Section 4.2 below.

Comprehensive Environmental Response, Compensation and Liability Information System Archived Sites (CERCLIS-NFRAP)

The CERCLIS-NFRAP database is a database of archived CERCLIS facilities at which, to the best of the EPA's knowledge, assessment has been completed and the EPA has determined that no further steps will be taken to list this site on the NPL. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site. The target parcel was not identified in the CERCLIS-NFRAP database. CERCLIS-NFRAP facilities were not identified within a ± 0.5 -mile radius of the target parcel.

Emergency Response Notification System (ERNS) Releases

The ERNS database is the EPA's database of emergency response actions. The target parcel was not identified as an ERNS site.

Federal Resource Conservation and Recovery Act (RCRA) CORRACTS

The RCRA Corrective Action Report (CORRACTS) is the EPA's database of registered hazardous waste handlers with RCRA corrective action activity. The target parcel was not identified as a CORRACTS site.

One (1) CORRACTS site was identified within a ± 1.0 -mile radius of the target parcel. The listed facility is identified as General Dynamics Armament Systems located at 128 Lakeside Avenue. The General Dynamics Armament Systems site is discussed in Section 4.2 below.

Federal Resource Conservation and Recovery Act (RCRA) non-CORRACTS TSDF

RCRA-TSDF database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the RCRA. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste. The target parcel was not identified as a non-CORRACTS TSDF site.

The database report identified one non-CORRACTS TSDF site within a ± 0.5 -mile radius of the target parcel. The listed facility is identified as General Dynamics Armament Systems located at 128 Lakeside Avenue. The General Dynamics Armament Systems site is discussed in Section 4.2 below.

Federal Resource Conservation and Recovery Act (RCRA) Generators

The RCRA Generators database is the EPA's database of registered hazardous waste generators. Generators include RCRA Large Quantity Generators (RCRA-LQG), RCRA Small Quantity Generators (RCRA-SQG), and RCRA Very Small Quantity Generators (RCRA-VSQG). The target parcel was not listed as a RCRA generator site.

The database report identified one (1) RCRA-SQG and two (2) RCRA-VSQGs within a ± 0.25 -mile radius of the target parcel. The listed RCRA-SQG is identified as the Pine Street Operation Center of Burlington Electric and is located at 585 Pine Street. The listed RCRA-VSQGs are identified as the City of Burlington DPW/Parks and Recreation facility and Cumberland Farms #4018, located at 645 and 661 Pine Street, respectively.

Federal Institutional Control / Engineering Control Sites

The Federal Institutional Control / Engineering Control (IC / EC) registry is the EPA's database of Superfund or RCRA sites that have either institutional or engineering controls in place as part of the remedial action to achieve or maintain protection of human health and the environment. The target parcel was not identified as a Federal IC/EC.

Two (2) Federal IC/EC sites were identified within a ± 0.5 -mile radius of the target parcel. The listed sites are identified as the Pine Street Canal Site and General Dynamics Armament Systems site located at Pine Street and 128 Lakeside Avenue, respectively. We note, although the target parcel was not listed as a Federal IC/EC site, it is included as part of the Pine Street Canal Superfund Site and is subject to ICs specific to the parcel. The General Dynamics Armament Systems site and the Pine Street Canal Superfund Site are discussed in Section 4.2 below.

State- and Tribal – equivalent CERCLIS

The State Hazardous Waste Sites (SHWS) database records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The target parcel was listed as a SHWS site.

The database report identified 46 SHWS sites within a ± 1.0 -mile radius of the target parcel. Of the listed facilities, five (5) are associated with the former MGP site including, the 453 Pine Street Site, Pine Street Barge Canal Site, General Electric Co., Former Bell Aircraft Dump, and the Maltex Pond Site. A listed facility identified as the 500 Pine Street site is situated to the east across Pine street from the target parcel. The Pine Street Canal Superfund Site and the 500 Pine Street Site are discussed in Section 4.2 below. The remaining listed facilities within the search radius are located a significant distance from the target parcel and/or are situated hydrogeologically cross-gradient relative to the target parcel.

Vermont Department of Environmental Conservation and Tribal Spill Reports

The spill database is a listing of hazardous material spills reported to the Vermont Department of Environmental Conservation. Depending on the nature of the spill, spill sites may also be listed in the SHWS database. The target parcel was not identified as a Spill site.

Vermont and Tribal Solid Waste Facilities/Landfill Sites (SWF/LF)

State/Tribal SWF/LF type records contain an inventory of solid waste disposal facilities or landfills in Vermont. The target parcel was not identified as a current or former SWF/LF.

Two (2) SWF/LF sites were identified within a ± 0.5 -mile radius of the target parcel and are identified as the CSWD Burlington Drop-Off Center and the Chittenden SWM District Environmental Depot. We note, the listed facilities both appear to be located at the same address of 339 Pine Street. The Chittenden SWM District Environmental Depot appears to be a closed recycling site, while the CSWD Burlington Drop-Off Center appears to be an active transfer station.

Vermont and Tribal Leaking Underground/Above-ground Storage Tank (LUST/LAST) List

The LUST/LAST list is a database of sites where leaking underground and above-ground storage tanks have been identified/reported and is maintained by the Vermont Department of Environmental Conservation. The database report did not identify the target parcel as a LUST/LAST site. No LAST sites were identified within a ± 0.5 -mile radius of the target parcel.

The database report identified twenty-four (24) LUST sites and one (1) LAST site within a ± 0.5 -mile radius of the target parcel. Of the listed LUST sites, nineteen (19) have a closed regulatory status. The remaining listed LUST/LAST sites are situated a significant distance from the target parcel and/or are hydrogeologically cross-gradient relative to the target parcel.

Vermont and Tribal Underground Storage Tank (UST) and Aboveground Storage Tank (AST) List

The UST/AST list is a database of registered underground and aboveground storage tanks maintained by the Vermont Department of Environmental Conservation. The target parcel was not identified as a UST/AST facility.

Nine (9) UST and three (3) AST sites were identified within a ± 0.25 -mile radius of the target parcel. Of the listed UST sites, 8 are currently listed as pulled or inactive, and have a Site Management Activities Completed (SMAC) priority designation where a site identification number exists. The remaining UST site is identified as Cumberland Farms #4018, located at 661 Pine Street. Cumberland Farms #4018 is situated approximately 1,200-feet to the south and hydrogeologically cross-gradient relative to the target parcel.

Two of the listed AST sites are located a significant distance to the south of the target parcel and are hydrogeologically cross-gradient relative to the target parcel. The remaining listed AST site is identified as the Burlington Electric Department located at 585 Pine Street. The Burlington Electric Department building, and equipment yard is located approximately 200-feet to the

southwest of the target parcel. According to the database report, the latest report entries are from 2008 – 2009, and correspond to various materials that were stored on-site. Mineral oil contained within small transformers and portable substations, 1,2-propylene glycol, d-limonene, and sodium chloride are identified as being stored at the facility; however, it is unclear from the database report if they are currently stored at the facility and if ASTs currently exist on site. Violations were not identified in the database report.

State Institutional / Engineering Control Sites

The State IC/EC database consists of state-maintained databases which contain information on sites with Activity and Use Restrictions (AURs) where remedial action relies on the restriction of site activities and uses to achieve or maintain protection of human health and the environment. The target parcel was not identified in the EDR report as a State IC/EC site. No State IC/EC sites were identified within a ±0.5-mile radius of the target parcel. We note, State IC/EC listed facilities were not included in the database report; however, the target parcel and surrounding parcels are subject to State Easements in relation to the Pine Street Canal Superfund Site.

Federal Brownfields Sites

The Federal Brownfields Sites database assists EPA in collecting, tracking, and updating information, as well as reporting on the major activities and accomplishments of the various Brownfield Grant Programs. The target parcel was not identified as a Federal Brownfields site.

Nine (9) Federal Brownfields sites were identified within a ±0.5-mile radius of the target parcel. Seven (7) of the listed facilities are located a significant distance from the target parcel and/or are located hydrogeologically cross-gradient relative to the target parcel. The two (2) remaining facilities are identified as 453 Pine Street and General Dynamics Armament Systems. The 453 Pine Street Site and General Dynamics Armament Systems are discussed in Section 4.2 below.

Vermont and Tribal Brownfields Sites

The Vermont Department of Environmental Conservation maintains a database of Brownfields sites that are registered with the agency. The database may not include the federal Brownfields sites. The target parcel was not identified as a New Hampshire Brownfields site.

Five (5) Vermont Brownfields sites were identified within a ±0.5-mile radius of the target parcel. Four (4) of the listed facilities are located a significant distance from the target parcel and/or are located hydrogeologically cross-gradient relative to the target parcel. The remaining facility is identified as the 453 Pine Street Site, which is discussed in Section 4.2 below.

Tribal Lands

The Tribal Lands database is a Department of Interior/Bureau of Indian Affairs database of areas with boundaries established by treaty, statute, and (or) executive or court order, recognized by the Federal Government as territory in which American Indian tribes have primary governmental authority. The target parcel was not identified as a Tribal Land site. The database did not identify Tribal Land sites within a ± 1.0 -mile radius of the target parcel.

Orphan Summary Sites

According to EDR, unmapped facilities are those that do not contain sufficient address or location information to evaluate the facility listing locations relative to the target parcel. Based on this, the EDR report listed two (2) unmapped facilities identified as Pine Street, and Pine Street South Connector Site.

The two (2) unmapped properties were identified through a search of EPA's RCRAInfo database and VTDEC Waste Management database and are discussed in Section 4.2 below.

4.2 Additional Environmental Sources

Additional environmental sources were utilized for information gathering purposes and a summary of those findings follows.

City of Burlington Municipal Records

Nobis attempted to review municipal files during field reconnaissance; however, municipal offices were closed due to the ongoing COVID-19 pandemic. Information requests were emailed to various city offices but responses to information requests were not received as of the writing of this report.

United States Environmental Protection Agency

Nobis reviewed files available through the EPA's Superfund and RCRAInfo searchable databases for information relating to the Pine Street Canal Superfund Site and the Pine Street South Connector Site, respectively. A summary of information reviewed follows:

Pine Street Canal Superfund Site – Pine Street, Burlington, Vermont

According to files reviewed on the EPA Pine Street Canal Superfund Site's website, the Superfund Site was historically utilized for various industrial and commercial purposes beginning in the mid-1800s. Development began after the railroad was constructed on the western side of the Pine Street Canal. The canal and turning basin were reportedly dredged in 1868 to allow local lumber

and coal companies to access Lake Champlain. Slips running northward from the turning basin and eastward toward Pine Street were constructed by the late 1870s.

According to historical reports, the Burlington Gas Light Company was incorporated in 1852 and began the operation of a MGP plant in the downtown area of Burlington by the mid-1850s. Burlington Gas Light Co., which was later called Burlington Gas Works constructed a MGP on Pine Street and moved their operations to the new location circa 1890s. The Pine Street plant used a coal gasification process to manufacture petroleum gas for the City. We note, the Burlington Gas Light Co. plant was later called the Burlington Gas Works, the Green Mountain Power Corp. Gas Plant, and Vermont Gas Systems.

The coal gasification process conducted at the Pine Street plant reportedly used wood chips as a filter media in the production of their manufactured gas. Once the wood chips were saturated with petroleum product, they were reportedly disposed of at the plant and used to fill in the wetland area behind the plant. The quantities of wastes disposed of are thought to be significant given the observed impacts to the Site. Other plant wastes included coal tar, fuel oil, cyanide, iron oxide, cinders, and metals. Disposal activities reportedly took place from the initiation of operations through 1949. It is speculated that around 1949 coal tar became profitable to recover and sell to roofing tar and asphalt dealers. Disposal of tar at the plant and in the adjacent wetlands is thought to have decreased in the 1950s and 1960s; however, other plant wastes appear to have been disposed of on site during this time. Vermont Gas Systems ceased operations of the Pine Street MGP in 1966, and the plant was dismantled in 1967.

Impacts to the area were documented as early as the mid-1920s when ‘light tar’ from the MGPs tar well was running into Lake Champlain. Several oily spills on Lake Champlain were reported to the United States Coast Guard from the mid-1960s to the mid-1970s. In January 1975 the Coast Guard reportedly cleaned up 1,000-gallons of oily material from the lake’s surface. Property owned by E.B & A.C. Whiting Co. was reportedly filled in 1977, resulting in the discharge of approximately 1,500-gallons of oily material into the Barnes Basin.

The Pine Street Canal Superfund Site was initially investigated by the Vermont Agency of Transportation (AOT) for the Southern Connector highway that was proposed to run through the area. The subsurface exploration program revealed extensive contamination beneath the Site. In some areas, coal tar was found to be up to ten-feet thick at the bottom of the wetland. According to historical reports, the State of Vermont nominated the Pine Street Canal Site as a candidate for the Superfund program in 1981. The Site was listed as a Superfund site on September 8, 1983. The

State of Vermont reclassified groundwater under much of the Site to Class IV, which prohibits its use as a potable drinking water source in 1993.

EPA identified potentially responsible parties (PRPs) who owned portions of the Site, were former owners or operators of the MGP, or had succeeded to the liability of former operators of the MGP, of their potential liability and responsibility for cost of environmental response actions under CERCLA in 1987, 1988, and 1992. In December 1988 EPA filed suit against three (3) former owners and/or operators of the MGP from 1930-1968. According to historical reports, additional parties were brought into the suit by the original defendants. A settlement was reached in December 1990 where EPA recovered costs from CERCLA response actions and could seek the cost of future response actions from the parties.

As noted above, the Pine Street Canal Superfund Site was investigated from 1976 to 1988 by the VT AOT, primarily in the southern portion of the Site along the proposed connector right-of-way. EPA took over investigative activities at the Site in 1988 and reportedly broadened the scope of investigations. EPA proposed a cleanup plan for the Site in 1992; however, public comment and community opposition was overwhelmingly negative, and EPA withdrew the cleanup proposal. Additional investigations were conducted from 1994-1998, including a Supplemental Remedial Investigation (SRI) in 1992 and Additional Remedial Investigation (ARI) in 1997 by the PRPs with oversight by VTDEC and EPA.

Through several investigations, EPA characterized the wastes as residuals from the coal gasification process. The wastes include aromatic hydrocarbons such as benzene, toluene, ethylbenzene, and xylene (BTEX compounds); polycyclic aromatic hydrocarbons (PAHs) in the form of light and heavy tars; and cyanides and sulfur compounds. MGP wastes also include several inorganics including aluminum, antimony, cobalt, nickel, iron, titanium, manganese, arsenic, lead, chromium, copper, vanadium, zinc, cadmium, molybdenum, and selenium. The investigations revealed that PAHs are the most ubiquitous contaminants at the Site. The primary source of contaminants is the extensive area of non-aqueous phase liquid (NAPL) beneath the canal and wetlands to the west of the former MGP. According to EPA documentation, MGP wastes are the primary source of contamination at the Site.

EPA released the second proposed cleanup plan in May 1998 that was ultimately adopted as the remedy for the Site. The Record of Decision (ROD) for the Site was issued on September 29, 1998. The selected remedy for the Site provides for:

- capping of contaminated soil;
- Site boundary definition;
- institutional controls for groundwater below the Site;
- institutional controls for land-use development;
- long-term performance monitoring, and;
- five-year reviews.

The remedy has been implemented at the Site, with two (2) Explanations of Significant Differences over the course of the project. The Site is currently subject to five-year reviews; the third, and most recent was completed on December 19, 2016. Compliance monitoring is ongoing and has been conducted as recently as October 2020.

The recent performance monitoring indicates an average thickness of 22-feet of measurable product, dense non-aqueous phase liquid (DNAPL) in passive recovery well RW-109 located on the east side of the canal in the amended cap area. Other passive recovery wells contain lesser amounts of DNAPL. The recent performance monitoring and NAPL gauging of groundwater monitoring wells indicated the presence of NAPL in MW-17, MW-23A, and MW-23B, which have historically contained product. Benzene and naphthalene continue to be detected at concentrations exceeding Vermont Groundwater Enforcement Standards (VGES) inside and outside of the Class IV groundwater area. Arsenic was reported at concentrations exceeding VGES inside and outside of the Class IV groundwater area.

Pine Street South Connector Site – Burlington, Vermont

The Pine Street South Connector Site was identified as an orphan site in the EDR database report and was listed as a RCRA-TSDF and RCRA NonGen/NLR facility. A query of the EPA's RCRAInfo database was completed to locate the orphan site and determine if the listed facility may present a REC relative to the target parcel. RCRAInfo records indicate that the listed facility is located ±1-mile to the north of the target parcel.

Vermont Searchable Sites Database(s)

Jackson Terrace Apartments – 500 Pine Street, Burlington, Vermont

VTDEC Site No. 20164629

The Jackson Terrace Apartments site was listed within the Spills and SHWS databases. The Spills listing is associated with a spill of less than 1-gallon of hydraulic oil on the property. According

to the EDR report, the Spills site was closed in January 1, 2000. The SHWS listing appears to correspond to contaminants detected during a Phase I/II Environmental Site Assessment for the property completed by the Verterre Group (Verterre) in January 2016.

According to files reviewed on the VTDEC Hazardous Sites List searchable database, the detected contaminants consisted of polycyclic aromatic hydrocarbon (PAH) compounds and total petroleum hydrocarbons (TPH) in groundwater beneath the northern portion of the site. Specifically, a groundwater exceedance for benzo[a]pyrene was reported. A supplemental site investigation (SSI) was requested by VTDEC and was completed in April 2016 by Ross Environmental Associates, Inc. (R.E.A.) of Stowe, Vermont.

As part of the SSI, R.E.A. advanced five (5) soil borings, field screened soil for the presence of volatile organic compounds (VOCs), collected soil samples for PAH and TPH-diesel range organics (TPH-DRO), installed three (3) monitoring wells on the northern portion of the property and collected groundwater samples. Analytical results for soil samples indicated the presence of several PAH compounds at concentrations above VTDEC Soil Screening Values (SSVs). TPH-DRO compounds were detected, but the reported concentrations were below applicable SSVs. Groundwater analytical data did not indicate the presence of contaminants above laboratory method detection limits.

Based on calculated groundwater elevations, R.E.A. inferred groundwater flow direction to be toward the north-northwest, away from the target parcel. We note, the monitoring well network appears to be in a straight line, also trending north-northwest. Groundwater flow may be more westerly than R.E.A. inferred.

R.E.A. concluded that the observed shallow soil PAH and TPH impacts were consistent with background concentrations of urban soils in historically developed areas. They attributed the impacts to historic industrial use of the site and surrounding properties along with atmospheric deposition from burned hydrocarbons. R.E.A. notes that the aerial extent of the contaminants was not defined or delineated but conditions requiring further investigation were not encountered

during their investigation. R.E.A. based their conclusion on site use and low-level contamination consistent with urban fills.

R.E.A. recommended that the monitoring wells be decommissioned, and that State regulations or guidance should be consulted prior to intrusive work on the northern portion of the property. The site currently has a priority status of SMAC in the VTDEC Hazardous Site List database.

453 Pine Street – Burlington, Vermont

VTDEC Site No. 20043192

According to available documents, the 453 Pine Street Site is a Brownfields Project within the Vermont Brownfields Reuse and Environmental Liability Limitation Act (BRELLA) program. According to historical reports, the property was used for various industrial purposes into the 1960s. The Site has been impacted by the adjacent MGP located at 501 Pine Street and contaminants including PAHs, VOCs, metals, and NAPL have been identified along the western and southern portions of the Site. Given the proximity to the adjacent Superfund Site, the property is subject to the deed restrictions of those properties considered part of the Superfund Site, including:

- The property will not be used for residential or child day care centers;
- Groundwater under the property shall not be used for potable drinking water and industrial production wells will not be permitted where free phase contamination is present;
- The property will be not be used to interfere with environmental investigations or cause contamination or re-contamination of adjacent properties;
- No activities that will change hydrogeologic conditions that would cause migration of contaminated ground water to Lake Champlain will be allowed, and;
- Excavations of greater than 5 feet below ground surface will generally be prohibited with the exception of existing utility repair or replacement, drilling, driving, or boring piles, if contaminant concentrations are below 140 mg/kg total PAH, and workers use proper personal protective equipment.

Several environmental and geotechnical investigations have been performed at the Site to date to delineate the vertical and aerial extent of contaminants associated with the former MGP operations on the adjacent parcel. A 2013 study further delineated and confirmed the location of NAPL along the western property boundary and on the 501 Pine Street-Rear Lot. A 2013 geotechnical investigation for proposed redevelopment was completed by GeoDesign of Middlebury Connecticut. A boring location plan associated with the work indicates that a geotechnical boring (AD-4) was advanced on the target parcel. The boring log indicates fill

material with a petroleum odor to approximately 9-feet below surface grade. Environmental samples were not collected and analyzed for potential contaminants to the best of our knowledge.

Former Bell Aircraft Dump – Lakeside Avenue, Burlington, Vermont

VTDEC Site No. 770039

According to an EPA preliminary assessment form, the Bell Aircraft Dump site was comprised of an area on the eastern portion of the former Bell Aircraft building on Lakeside Avenue. Plating wastes and paint sludges were reportedly dumped into unlined lagoons to the east of the building. Contaminants identified in historical reports included various oils, cyanide, methylene chloride, carbon tetrachloride, chloroform, and trichlorethylene. Additionally, magnesium scrap metal waste from plant operations was disposed of in a swamp area to the east of the building. The dumping took place from circa 1948 to 1968 and was reportedly cleaned up in 1968. Groundwater samples collected from on-site wells in 1972 and 1982 did not indicate the presence of contaminants in groundwater. Further documentation relating to the suspected contamination on the site was not found in the VTDEC Hazardous Site List searchable database.

According to the regulatory file, a SMAC letter was issued for the site on August 7, 1998. We note, the SMAC letter cited is for VTDEC Site No. 770040, however, the property appears to be the same as Site No. 770039. The property appears to have been initially occupied by Bell Aircraft, then by General Electric (G.E.), and then by General Dynamics Armament Systems. The SMAC letter cited above references five (5) potential or known releases at the site; however, they appear to only include those from G.E. and General Dynamics.

General Electric Comp. (General Dynamics Armament Systems) – 128 Lakeside Avenue, Burlington, Vermont

VTDEC Site No. 770040

According to the files reviewed on the Hazardous Sites List searchable database, a SMAC for the site was issued on August 7, 1998 (same as cited above). Other documents contained in the regulatory files available within the Hazardous Site List searchable database include a 1990 status report for cleanup activities at Building No. 61 and a Grant of Environmental Restrictions between Fortieth Burlington, LLC. and the State of Vermont, Agency of Natural Resources, Department of Environmental Conservation dated January 23, 2006. The Grant of Environmental

Restrictions addresses documented contaminants on the site by restricting land use in two (2) areas identified as the former oil house area and filled land area.

Pine Street – Burlington, Vermont

VTDEC Site No. 911096

The Pine Street site was identified as an orphan site in the EDR database report and was listed as a VT LUST facility. According to information reviewed on the VT Hazardous Sites List searchable database, the site is identified as VT AOT and is located on Pine Street. The site currently has a No Further Action Planned (NFAP) priority status. The source of contamination is listed as UST-Gasoline, with a discovery date of August 1, 1993. According to a note in the listing, the site appears to be associated with the Pine Street Canal Superfund Site and has a reference to File No. 770042. Information as to the location of the listed orphan-LUST site was not found in the 770042 regulatory files.

4.3 Historical Use Information on the Site

A review of historical topographic maps, Sanborn Fire Insurance Maps, aerial photographs, and local street directories was completed to assess historical property use for the target parcel and vicinity. Historical information included in the database report is included as Appendix C, and indicates the following:

Topographic Maps

Readily available historic United States Geological Survey topographic maps dated 1906, 1919, 1944, 1948, 1972, 1987, and 2012 were provided by EDR, and were reviewed to ascertain area conditions.

The 1906 map depicts a large structure on the target parcel with additional structures to the north along Pine Street. A wetland area is depicted immediately to the west of the target parcel, with a large building to the southwest and a rail line farther west. The Pine Street Canal and associated turning basin are evident on the map. The 1919 map depicts a building to the north of the target parcel, with further development to the southwest and east. A slip, oriented east-west, is depicted at the southern end of the Pine Street Canal.

The 1948 map depicts the former MGP on the target parcel, with two gasometers to the north of the target parcel. Further development along Pine Street to the north of the target parcel is evident. A large building is situated to the southwest along Lakeside Avenue, inferred to be the Bell Aircraft facility. A large building presumed to be the present-day Jackson Terrace apartment building is depicted across Pine Street to the east of the target parcel. The Pine Street Canal and associated wetland complex appears larger and is depicted farther south than on previous maps.

The 1972 map depicts the target parcel and surrounding area in a similar configuration to the previous map, with the exception of several bulk storage tanks at the north end of the Pine Street Canal and the buildings currently occupied by the Burlington Electric Department to the southwest of the target parcel.

The former MGP facility and associated gasometers are not depicted on the 1987 map. Buildings to the north of the target parcel along Pine Street up to the intersection of Howard Street are no longer depicted and are presumed to have been demolished. Further development at the G.E./General Dynamics Armament Systems facility on Lakeside Avenue is evident on the map. Structures are not depicted on the 2012 map; however, area roadways appear to be in a similar configuration to present day conditions.

Sanborn Fire Insurance Maps

During the late 19th Century, companies such as the Sanborn Company began preparing maps of central business districts for use by fire insurance companies. These maps were updated and expanded geographically periodically through the 20th Century. Fire insurance maps often indicate construction materials, specific property use, and the location of other features such as gasoline storage tanks.

Based upon inquiries to EDR, a licensed Sanborn provider, Sanborn Map coverage dated 1885, 1889, 1894, 1900, 1906, 1912, 1919, 1926, 1938, 1942, 1950, 1960, 1978, and 1989 were available for the target parcel and are summarized below. We note, the target parcel appears to exist in an unmapped area on the 1885, 1889, 1894, and 1900 maps.

The 1906 map depicts the target parcel to the south of the Burlington Light & Power Co. Gas Plant. The gas plant is comprised of a main building with attached coal and oil houses, two (2) gas holders to the north of the main building, a tank to the west of the main building, a coke shed, and what appears to be a pipe shed. The main building contains a purifying room, compressing room, engineering area, and gas products storage area. A rail siding is shown to run from the north, parallel to Pine Street (north-south), around the east side of the easternmost gas holder and into the coal house. The Reid Murdoch & Co. canning maple sugar & syrup operation exists to the north of the MGP. The east-west oriented Pine Street Canal slip is depicted in the northwest corner of the map.

The main building of the Burlington Light & Power Co. Gas Plant is depicted on the northwest portion of the target parcel on the 1912 and 1919 maps. Compression and purification areas appear to exist on and adjacent to the target parcel, respectively. Generally, the gas plant has a similar configuration as depicted on the 1906 map, with the exception of a third gas holder located

directly to the south of the target parcel. The building appears to be constructed with iron truss' and an asbestos roof. The Reid Murdoch & Co. maple sugar & syrup operation exists to the north of the MGP. The Pine Street Canal slip and lumber sheds are depicted in the northwest corner of the map, with additional lumber sheds to the northeast across Pine Street.

The 1926 and 1938 maps depict the target parcel similarly to the previous maps; however, the MGP is now labeled as Green Mountain Power Corp. Gas Works. As noted above, compression and purification areas appear to exist on and adjacent to the target parcel, respectively. Additionally, the oil house appears to have been removed and replaced with three (3) oil tanks. The rail spur appears to have been removed from the MGP and now crosses Pine Street to the east. A large building is depicted to the east across Pine Street and is labeled as a woodworking and finishing building. Kilns are situated at the northern end of the building with a gas tank located behind the building. Lumber piles are located to the north of the woodworking and finishing building. The building to the north of the target parcel and MGP is now labeled as brush fiber storage building. What appear to be lumber piles and the Pine Street Canal slip are located in the northwest corner of the maps.

The 1942, 1950, and 1960 maps depict the main building of the Green Mountain Power Corp. Gas Plant on the northern portion of the target parcel. The MGP is depicted in far more detail than on the previous maps. The purification, compression, and gas producer portions of the MGP are depicted as being on the target property in each of the maps. Three (3) purifying tanks are depicted along the western exterior wall of the main building. A tar pump house, tar separator, and several tar tanks are located to the west of the target parcel. The northwest AST is labeled as oil storage while the northeast gas holder is labeled as having a 75,000 cubic-foot capacity. The gas holder to the south of the target parcel appears to have a 450,000 cubic-foot capacity. The rail spur is again shown to connect to the coal house from the north. The E.B. & A.C. Whiting Co. Inc. brush fiber manufacturing company is situated to the north of target parcel. The manufacturing building to the east across Pine Street is occupied by the Queen City Tulax Corp., a manufacturer of rubberized upholstering pads. E.B. & A.C. Whiting Co. warehouses are located farther to the north.

The 1978 and 1989 maps depict one small structure on the target parcel labeled as a Green Mountain Power Corp. regulation station. The MGP and appurtenances are no longer depicted on and in the vicinity of the target parcel. The Jackson Terrace apartment building is depicted to the east, across Pine Street. An office building with attached warehouse is depicted to the southwest of the target parcel, with Green Mountain Power Corp. depicted at the southern edge of the map.

Aerial Photographs

Readily available historical aerial photographs supplied by EDR were reviewed for the target parcel to obtain pertinent information concerning the history of development on and in the vicinity of the target parcel. We note that evaluation of these aerial photographs may be limited by the quality and scale of the image. Aerial photographs from 1937, 1939, 1942, 1972, 1974, 1981, 1986, 1992, 1994, 1999, 2006, 2009, 2012 and 2016 were reviewed, and are summarized below.

The MGP is visible on the target parcel, with one (1) gasometer to the south and two (2) gasometers and a small building to the north of the target parcel. Several larger buildings exist farther to the north along Pine Street. The area to the east of the target parcel across Pine Street is occupied by a large building. What appears to be a large industrial building, likely the former Bell Aircraft facility, is situated to the southwest. The Pine Street Canal and associated wetland area is visible to the west of the target parcel. East-west and north-south oriented slips extending inland from the canal are visible. The Rutland Rail yard is visible to the north of the canal and turning basin.

Resolution and/or image quality are poor on the 1939 and 1942 images. The gasometers noted above are visible in the images; however, further details were not ascertainable from the image.

The MGP building and gasometers are no longer visible in the 1972 image; however, a small structure appears to be situated on the target parcel. What appears to be an access drive from Pine Street runs along the southern property boundary into the 053-1-002 parcel, terminating at what appears to be a soil pile. We note, the soil pile that is visible in this image appears to be the same soil pile that is currently on the adjacent parcel. The building to the north of the former MGP appears to have been demolished, and a cleared area exists where the current day 453 Pine Street parcel is located. The large building to the east across Pine Street appears to have changed little from the 1932 photograph. A large building is located to the southwest of the target parcel with a larger building farther southwest. The Pine Street Canal and associated wetland area is visible to the west of the target parcel with the Rutland Railroad farther west. The north-south oriented slip appears to have been filled in, while the east-west oriented slip appears to be overgrown. Bulk fuel ASTs are situated to the north of the canal and turning basin. The Rutland Rail yard is visible to the north of the canal and turning basin.

Resolution and/or image quality are poor on the 1974 and 1981 images. Pertinent site features could not be ascertainable from the photos. The general vicinity appears to be in a similar configuration to previous photographs.

The target parcel does not appear to be developed in the 1986 image. What appears to be an access drive and soil pile are situated directly to the north and west of the target parcel, respectively. The

area to the north appears to be vegetated with an additional access drive into the central portion of the lot with a large building farther north. A large structure is located to the southwest with a much larger industrial property to the west-southwest. A large building exists to the east across Pine Street, with residential properties farther east. The Pine Street Canal, associated wetlands and turning basin are visible; however, the east-west oriented slip is no longer visible in the 1986 image. A bulk fuel terminal exists to the north of the canal and turning basin. The target parcel and surrounding area generally appear similar in the 1992 image with the exception of a small fenced enclosure along the access drive north of the target parcel on the 453 Pine Street parcel.

Resolution and image quality are poor on the 1994 image. Pertinent site features could not be ascertained; however, vegetation is evident on and target parcel and surrounding parcels from the color infrared photograph. The general area appears to be in a similar configuration to the previous photograph.

The target parcel appears wooded and undeveloped in the 1999 – 2016 photographs. The general area appears similar to the previous photographs with the exception of the removal of the bulk fuel terminal to the north of the Pine Street Canal and turning basin in the 1999 image. The Pine Street Canal Superfund Site appears relatively unchanged in the 1999 – 2016 images, with greater amounts of vegetation in subsequent photographs.

Local Street Directories

The city directories used in this study were made available through EDR and were reviewed at approximate 5-year intervals, if readily available for historic target parcel usage. City directories for the years 1963, 1967, 1992, 1995, 2000, 2005, 2010, 2014, and 2017 were reviewed.

A listing for Green Mountain Power Corp. at 501 Pine Street appears in the 1963 directory. Other notable listings include the Champlain Oil Co. at 345 Pine Street, Citizens Coal & Oil Co. Inc. at 377 Pine Street, Pepsi-Cola Bottling Co. of Burlington at 405 Pine Street, The Maltex Co. at 431 Pine Street, EB & AC Whiting brush manufacturers at 453 Pine Street, and Sager Wholesale Grocery Co. at 500 Pine Street.

A listing for Green Mountain Power Corp. gas plant at 501 Pine Street appears in the 1963 directory. Other notable listings include Green Mountain Petroleum Corp. at 345 Pine Street, Citizens Coal & Oil Co. Inc. at 377 Pine Street, Pepsi-Cola Bottling Co. of Burlington at 405 Pine

Street, The Maltex Co. at 431 Pine Street, Holmes Transportation at 453 Pine Street, and S.R. Saiger Co. Inc. at 500 Pine Street.

The target parcel is not listed in the directories from 1992 through 2017. It appears that the industrial nature in the general vicinity of the target parcel changed to primarily commercial and residential by 1992.

Date of Development

Based on the information compiled for the assessment, it appears that the target parcel was developed as an MGP in the late 1890s. The MGP reportedly operated from the late 1890s through 1966. The plant was reportedly dismantled in 1967 by Vermont Gas.

4.4 Historical Use Information on Adjoining Properties

Based upon information provided by EDR, it appears that development of the surrounding area began by at least the 1880s. Properties to the north were initially utilized for the storage of lumber associated with area mills. The property to the north was then utilized for the production of malted cereals, followed by a canning and maple sugar operation, and then a brush fiber manufacturer and warehouse. The buildings associated with the property to the north were demolished at some time in the late 1960s or early 1970s, and the area has been vacant since.

The property to the east across Pine Street was developed at some time between 1919 and 1926 with a manufacturing building. The property was utilized for manufacturing purposes until at least 1960 and was later utilized for residential purposes. The property to the southwest remained undeveloped until at least 1960 but was developed by at least 1972 with a commercial building. According to the historical documents reviewed for this report, parcels to the west have not been developed.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Nobis visited the property on October 21, 2020 to observe general site conditions. All portions of the target parcel were accessible during the site visit. General site features for the target parcel are shown on Figure 2, area features are shown on Figure 3. Site photographs are provided on Figure 4.

5.2 General Site Setting

The target parcel is located at 501 Pine Street, Chittenden County, Vermont and is undeveloped and vacant land. The target parcel is located approximately 0.5-miles from Downtown Burlington in a mixed-use commercial and residential area. Vacant lands are situated to the north and west. A large apartment building is situated to the east of the target parcel, while the Burlington Electric Company is located to the south of the target parcel.

The target parcel is near the eastern edge of a wetland area associated with the Pine Street Canal. Several wetland communities are present in the vicinity, including palustrine emergent wetland, palustrine open water, palustrine forested wetland, and palustrine scrub-shrub wetland. Lake Champlain is situated to the west beyond the wetlands, the Pine Street Canal, and the Vermont Railway rail line. The topography on the target parcel and vicinity is generally level with gentle slopes to the west and Lake Champlain. The target parcel has an approximate elevation of ± 100 -feet above sea level.

5.3 Exterior Observations

The target parcel is currently vacant land and undeveloped. The property is partially wooded and appears to have been cleared of smaller vegetation recently. The lot is generally level, however there is a low-lying area on the south-southwestern portion of the property. The ground was covered with leaf litter during field reconnaissance and direct observation of surface soil was not feasible. Metal piping was observed on the ground and may be related to former site use by Vermont Gas. Occasional bricks and concrete pieces were on the ground surface on and in the vicinity of the target parcel.

5.4 Interior Observations

The target parcel is not currently developed.

6.0 INTERVIEWS

6.1 Interview with Current Parcel Owner

An interview with a representative of Vermont Gas Systems, Inc. (Vermont Gas), Mr. Steve Miner, was completed during field reconnaissance. Mr. Miner indicated that he had not worked at Vermont Gas when the former MGP was operational and indicated that Vermont Gas didn't operate the plant for very long. Mr. Miner indicated that Green Mountain Power was the primary stakeholder (operator) of the plant and that Vermont Gas was an off-shoot of Green Mountain Power that was formed in circa 1960s. Mr. Miner indicated that as far as he could recall, the target

parcel was historically occupied with a small shed, known as the regulator shed or gate house, where high pressure gas from incoming pipelines was regulated down to lower pressures to service the community. Mr. Miner indicated that the shed was dismantled approximately thirty-years ago, and the underground gas piping was abandoned in-place.

6.2 Interviews with Occupants

See Section 6.1 for information regarding property owner interview.

6.3 Interviews with Local Government Officials

Local government officials were not interviewed as part of this assessment.

6.4 Interviews with Others

Nobis conducted a telephone interview with Mr. Jay Mullooney of Vermont Gas on November 5, 2020. Mr. Mullooney indicated that Vermont Gas was an ‘off-shoot’ of Green Mountain Power, and that the company was formed in the mid-1960s. According to Mr. Mullooney, Vermont Gas was charged with dismantling the MGP and indicated that Vermont Gas didn’t operate the plant for long, if at all. Mr. Mullooney confirmed that Vermont Gas was a performing defendant in relation to the Pine Street Canal Superfund Site, and that they had participated in the completion of remedial investigations at the property. Mr. Mullooney indicated that the records of the legal proceedings and investigations were made public through EPA’s website.

7.0 FINDINGS

The Findings of the ASTM E 1527-13 Phase I ESA identify the known or suspected *RECs*, *Controlled RECs*, *Historical RECs*, and/or *de minimis* conditions at the target parcel. The Opinion (Section 8.0) will discuss the impact to the target parcel (*i.e.*, *REC*, *Controlled REC*, *Historical REC*, or *de minimis* conditions) and present the logic and reasoning for making that determination. Based on the information collected during a Phase I ESA of the parcel identified as No. 053-1-001-000 in Burlington, Vermont, Nobis presents the findings detailed below.

The target parcel is located at 501 Pine Street in Burlington, Chittenden County, Vermont, and is identified by the City of Burlington as Parcel No. 053-1-001-000. According to the City of Burlington Assessor’s records, the parcel is comprised of 5,400 square feet, or 0.12-acres, and is currently owned by Vermont Gas Systems, Inc. of South Burlington, Vermont. The target parcel is currently included in the Pine Street Canal Superfund Site boundary and is subject to institutional controls.

The target parcel is situated in a mixed-use commercial and residential area along Pine Street with an apartment building to the east vacant and undeveloped land to the north, with commercial properties farther north. The Pine Street Canal and associated wetlands are situated to the west with Lake Champlain farther west. The Burlington Electric Co. is situated to the south of the target parcel with industrial properties farther south.

Historical data including topographic maps, aerial photographs, directories, and municipal records suggest that the target parcel was initially developed as MGP in the late 1890s. The MGP reportedly operated since the initial construction of the plant until 1966. According to historical reports the plant was dismantled in 1967. The plant was operated by the Burlington Gas Light Co., Burlington Gas Works, the Green Mountain Power Corp., and Vermont Gas Systems.

The coal gasification process conducted at the Pine Street plant reportedly used wood chips as a filter media in the production of their manufactured gas. Once the wood chips were saturated with petroleum product, they were reportedly disposed of at the plant and used to fill in the wetland area behind the plant. Other plant wastes included coal tar, fuel oil, cyanide, iron oxide, cinders, and metals. Disposal activities reportedly took place from the initiation of operations through 1949.

The Pine Street Canal Superfund Site was initially investigated by the VT AOT for the Southern Connector Highway that was proposed to run through the area. The subsurface exploration program revealed extensive contamination beneath the Site. In some areas, coal tar was found to be up to ten-feet thick at the bottom of the wetland. The Site was listed as a Superfund site on September 8, 1983. The State of Vermont reclassified groundwater under much of the Site to Class IV, which prohibits its use as a potable drinking water source in 1993.

EPA identified potentially responsible parties (PRPs) who owned portions of the Site, were former owners or operators of the MGP, or had succeeded to the liability of former operators of the MGP, of their potential liability and responsibility for cost of environmental response actions under CERCLA in 1987, 1988, and 1992. In December 1988 EPA filed suit against three (3) former owners and/or operators of the MGP from 1930-1968. A settlement was reached in December 1990 where EPA recovered costs from CERCLA response actions and could seek the cost of future response actions from the parties. We note, the current property owners are considered performing defendants and have contributed to investigations and cleanup at the site.

The Site was investigated from 1976 to 1988 by the VT AOT, EPA took over investigative activities at the Site in 1988. EPA proposed a cleanup plan for the Site in 1992; however, public comment and community opposition was overwhelmingly negative, and EPA withdrew the cleanup

proposal. Additional investigations were conducted from 1994-1998, including a Supplemental Remedial Investigation (SRI) in 1992 and Additional Remedial Investigation (ARI) in 1997 by the PRPs with oversight by VTDEC and EPA.

Through several investigations, EPA characterized the wastes as residuals from the coal gasification process. The wastes include BTEX compounds; PAHs in the form of light and heavy tars; and cyanides and sulfur compounds. MGP wastes also include several inorganics including aluminum, antimony, cobalt, nickel, iron, titanium, manganese, arsenic, lead, chromium, copper, vanadium, zinc, cadmium, molybdenum, and selenium. The investigations revealed that PAHs are the most ubiquitous contaminants at the Site. The primary source of contaminants is an extensive area of NAPL beneath the canal and wetlands to the west of the former MGP. According to EPA documentation, MGP wastes are the primary source of contamination at the Site.

EPA released the second proposed cleanup plan in May 1998 that was ultimately adopted as the remedy for the Site. The Record of Decision (ROD) for the Site was issued on September 29, 1998. The selected remedy for the Site provides for:

- capping of contaminated soil;
- Site boundary definition;
- institutional controls for groundwater below the Site;
- institutional controls for land-use development;
- long-term performance monitoring, and;
- five-year reviews.

The remedy has been implemented at the Site, with two (2) Explanations of Significant Differences over the course of the project. The Site is currently subject to five-year reviews; the

third, and most recent was completed on December 19, 2016. According to available records, the most recent compliance monitoring for the site was completed in the fall of 2016.

Pursuant to the remedy outlined above, the target parcel is subject to the following land-use restrictions (institution controls):

- The property will not be used for residential or child day care centers;
- Groundwater under the property shall not be used for potable drinking water and industrial production wells will not be permitted where free phase contamination is present;
- The property will be not be used to interfere with environmental investigations or cause contamination or re-contamination of adjacent properties;
- No activities that will change hydrogeologic conditions that would cause migration of contaminated ground water to Lake Champlain will be allowed, and;
- Excavations of greater than 5 feet below ground surface will generally be prohibited with the exception of existing utility repair or replacement, drilling, driving, or boring piles, if contaminant concentrations are below 140 mg/kg total PAH, and workers use proper personal protective equipment.

Although not included in the Superfund Site, the 453 Pine Street property has had several environmental and geotechnical investigations performed on the property to delineate the vertical and aerial extent of contaminants associated with the former MGP operations on the adjacent parcel. A 2013 study further delineated and confirmed the location of NAPL along the western property boundary and on the 501 Pine Street-Rear Lot. A 2013 geotechnical investigation for proposed redevelopment was completed by GeoDesign of Middlebury Connecticut. A boring location plan associated with the work indicates that a geotechnical boring (AD-4) was advanced on the target parcel. The boring log indicates fill material with a petroleum odor to approximately 9-feet below surface grade. Environmental samples were not collected and analyzed for potential contaminants to the best of our knowledge.

Several properties were identified in various database reports provided by EDR, including properties ultimately included in the Pine Street Superfund Site. Those listed properties of potential significance not included in the Superfund Site are discussed separately below.

Jackson Terrace Apartments – 500 Pine Street, Burlington, Vermont

VTDEC Site No. 20164629

The Jackson Terrace Apartments site was listed within the Spills and SHWS databases. The Spills listing is associated with a spill of less than 1-gallon of hydraulic oil on the property. According to the EDR report, the Spills site was closed in January 1, 2000. The SHWS listing appears to

correspond to contaminants detected during a Phase I/II Environmental Site Assessment for the property completed by Verterre in January 2016.

According to files reviewed on the VTDEC Hazardous Sites List searchable database, the detected contaminants consisted of polycyclic aromatic hydrocarbon (PAH) compounds and total petroleum hydrocarbons (TPH) in groundwater beneath the northern portion of the site. A SSI was completed at the site and included the advancement of five (5) soil borings and installation of three (3) groundwater monitoring wells. Soil samples were submitted for laboratory analyses of PAH and TPH-DRO. Analytical results for soil samples indicated the presence of several PAH compounds at concentrations above VTDEC SSVs. TPH-DRO compounds were detected, but the reported concentrations were below applicable SSVs. Groundwater analytical data did not indicate the presence of contaminants above laboratory method detection limits.

Based on calculated groundwater elevations, R.E.A. inferred groundwater flow direction to be toward the north-northwest, away from the target parcel. We note, the monitoring well network appears to be in a straight line, also trending north-northwest. Groundwater flow may be more westerly than R.E.A. inferred.

R.E.A. concluded that the observed shallow soil PAH and TPH impacts were consistent with background concentrations of urban soils in historically developed areas. They attributed the impacts to historic industrial use of the site and surrounding properties along with atmospheric deposition from burned hydrocarbons. R.E.A. notes that the aerial extent of the contaminants was not defined or delineated but conditions requiring further investigation were not encountered during their investigation. R.E.A. recommended that the monitoring wells be decommissioned, and that State regulations or guidance should be consulted prior to intrusive work on the northern portion of the property. The site currently has a priority status of SMAC in the VTDEC Hazardous Site List database.

Pine Street – Burlington, Vermont

VTDEC Site No. 911096

The Pine Street site was identified as an orphan site in the EDR database report and was listed as a VT LUST facility. According to information reviewed on the VT Hazardous Sites List searchable database, the site is identified as VT AOT and is located on Pine Street. The site currently has a No Further Action Planned (NFAP) priority status. The source of contamination is listed as UST-Gasoline, with a discovery date of August 1, 1993. According to a note in the listing, the site appears to be associated with the Pine Street Canal Superfund Site and has a reference to File No.

770042. Information as to the location of the listed orphan-LUST site was not found in the 770042 regulatory files.

8.0 OPINION

The Opinion of the ASTM E 1527-13 Phase I ESA defines the environmental professional's determination of the impact to the target parcel (i.e., REC, Controlled REC, Historical REC, or de minimis) of the conditions identified in the Findings and presents the logic and reasoning for making that determination. Based on review of the documentation available for the preparation of this Phase I ESA and the observations made on the target parcel, it is the opinion of the Environmental Professionals who prepared this assessment that one (1) *Historical REC*, one (1) *Controlled REC*, and one (1) *REC* exist relative to the target parcel. Nobis' opinions regarding the findings of this ESA are detailed below.

De Minimis Conditions

Nobis' review of the municipal and historical information available for the target parcel and adjoining properties, as well as the observations made during this Phase I ESA, identified one (1) *de minimis conditions* associated with the target parcel.

Pine Street – Burlington, Vermont

VTDEC Site No. 911096

The Pine Street site was identified as an orphan site in the EDR database report and was listed as a VT LUST facility. According to information reviewed on the VT Hazardous Sites List searchable database, the site is identified as VT AOT and is located on Pine Street. The site currently has a No Further Action Planned (NFAP) priority status. The source of contamination is listed as UST-Gasoline, with a discovery date of August 1, 1993. According to a note in the listing, the site appears to be associated with the Pine Street Canal Superfund Site and has a reference to File No. 770042. Information as to the location of the listed orphan-LUST site was not found in the 770042 regulatory files. Given the fact that there have been no documented USTs on the target parcel and that USTs were not observed in the vicinity of the target parcel on historical maps. The location of the tank is unknown; however, it is unlikely that the tank has adversely impacted the target parcel.

Historical Recognized Environmental Conditions

Nobis' review of the municipal and historical information available for the target parcel and adjoining properties, as well as the observations made during this Phase I ESA, identified one (1) *Historical REC* associated with the target parcel.

The Jackson Terrace Apartments site located at 500 Pine Street is listed as a former SHWS site and is located hydrogeologically upgradient of the target parcel. Initial environmental investigations at the property revealed the presence of PAHs and TPH in soil and groundwater beneath the site. A subsequent investigation at the property indicated the presence of impacts to soil only. The observed shallow soil PAH and TPH impacts are consistent with background concentrations of urban soils in historically developed areas. The impacts could be related to historic industrial use of the site and surrounding properties along with atmospheric deposition from burned hydrocarbons. VTDEC issued a SMAC on March 31, 2017 for the site and closed the regulatory file. The regulatory status of the former SHWS Project constitutes a *Historical REC* relative to the target parcel.

Controlled Recognized Environmental Conditions

Nobis' review of the municipal and historical information available for the target parcel and adjoining properties, as well as the observations made during this Phase I ESA, identified one (1) *Controlled REC* associated with the target parcel.

The target parcel is included within the Pine Street Canal Superfund Site, which has significant thicknesses of NAPL and high concentrations of PAHs within soil and groundwater. The properties within the Superfund Site boundary are subject to institutional controls limiting land-use and groundwater use as detailed above. Given the adverse impacts to the environment in the vicinity of the target parcel, the Pine Street Canal Superfund Site is considered a *Controlled REC* relative to the target parcel.

Recognized Environmental Conditions

Nobis' review of the municipal and historical information available for the target parcel and adjoining properties, as well as the observations made during this Phase I ESA, identified one (1) *REC* associated with the target parcel.

From approximately the late 1890s through 1966 an MGP was operated on the target parcel. Disposal practices at the former MGP have impacted the surrounding properties and the Pine Street Canal with coal gasification waste products. The target parcel was included within the Pine Street Canal Superfund Site and is subject to institutional controls provided for by the remedy. Numerous environmental investigations have been conducted at and around the Pine Street Canal Superfund Site; however, to the best of our knowledge, environmental investigations have not been carried out on the target parcel. It appears as though there may have been a single geotechnical boring that was advanced on the target parcel, but conflicting boring location plans show the boring either inside or outside the target parcel boundary. The lack of environmental

data in relation to the environmental condition on and beneath the target parcel in light of historic property use presents a *REC* relative to the target parcel.

9.0 CONCLUSIONS

In accordance with ASTM Practice E 1527-13 requirements, the Environmental Professionals that prepared this Phase I ESA provide the following Statement of Conclusion:

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of the parcel identified by the City of Burlington on Parcel No. 053-1-001-000. Any exceptions to, or deletions from, this practice are described in Sections 1.4 and 10.0 of this report. This assessment has revealed evidence of one (1) *Historical REC*, one (1) *Controlled REC*, and one (1) *REC* in connection with the target parcel.

10.0 DEVIATIONS

No substantive deviations from ASTM E 1527-13 were encountered during performance of this Phase I ESA. Limitations of this Phase I ESA are detailed in Section 1.4.

11.0 ADDITIONAL SERVICES

Additional Services are assessments, recommendations, or other details beyond the scope of ASTM Practice E 1527-13. No additional services were conducted as part of this assessment.

Based on the findings of this assessment, a Phase II Environmental Site Assessment (Phase II ESA) is warranted to fully evaluate the environmental conditions at the target parcel. The Phase II ESA should include a subsurface investigation inclusive of the following:

- Geophysical survey/utility locating to identify abandoned gas piping;
- Soil boring/monitoring well installations to define the potential lateral and vertical extent of impacts associated with former MGP operations at the property;
- Sampling of soil, soil gas, and groundwater beneath the property for contaminants of concern (COCs);
- COCs at the target property include:
 - o VOCs – soil, soil gas, and groundwater
 - o PAHs – soil, soil gas, and groundwater
 - o TPH – soil and groundwater
 - o Cyanide – soil and groundwater
 - o Dieldrin – soil and groundwater
 - o Antimony – groundwater
 - o Vanadium – soil and groundwater
 - o Manganese – groundwater
 - o RCRA Metals – soil and groundwater

13.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

In accordance with ASTM Practice E 1527-13 12.13, Nobis provides the following statements of qualification:

We declare that, to the best of our professional knowledge and belief, we meet the definition of *environmental professionals* as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the target

parcel. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The qualifications of the *environmental professionals* who prepared, or supervised the preparation of, this report, and who are signatories of this report, are provided below.

Clarence “Tim” Andrews, P.G.

Senior Project Manager

- State of New Hampshire Professional Geologist.
- Over 24 years of experience conducting various investigations to identify the extent of airborne, soil, and groundwater organic and inorganic contamination at residential, commercial, and industrial sites. Researched historical federal, state, local, and commercial records to collect background information for numerous environmental projects.
- Performed or overseen numerous Phase I ESAs and other environmental projects involving research, investigation, and data assessment of historical and current site conditions on current or former residential, commercial, and industrial properties. Investigations have included identification, assessment, and delineation of petroleum and hazardous substances released to the environment or with the potential for release to the environment.
- Project responsibilities have included interaction with clients and regulators; coordination and oversight of subcontractors; data collection, interpretation and presentation; and report preparation. Acts as technical lead or project manager on numerous water quality assessment projects and long-term monitoring projects.

Dylan H. Bush

Project Geologist

- Over 8 years of experience as a Geologist responsible for supporting various investigations to identify the extent of airborne, soil, and groundwater organic and inorganic contamination at residential, commercial, and industrial sites. Researched historical federal, state, local, and commercial records to collect background information for multiple environmental projects.
- Conducted numerous environmental investigations and sampling events requiring oversight of subsurface drilling and sampling, groundwater and drinking water sample collection, and data assessment and reporting for regulatory agencies.
- Performed numerous Phase I ESAs and other environmental projects involving research and investigation, data assessment of historic and current site conditions, interviews with property owners, and report preparation.

LIMITATIONS

- 1) These environmental services were performed in accordance with generally accepted practices of other consultants using the degree of skill and care exercised in undertaking similar services at the same time and in the same geographical area. The results of these services are based on our professional judgment and are not scientific certainties. Specifically, Nobis Group® (Nobis) does not and cannot represent that the site contains no hazardous wastes, oil or other latent conditions beyond those observed during this assessment. No other warranty, express or implied, is made.
- 2) The observations and conclusions presented in this report were made solely on the basis of conditions described in the report and not on scientific tasks or procedures beyond the scope of described services or the budgetary and time constraints imposed by the client. Nobis shall not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the investigation was performed. The work described in this report was performed in accordance with the terms and conditions of our contract. No other warranty, express or implied, is made.
- 3) Observations were made of the site as indicated in this report. Where access to portions of the site were unavailable or limited, Nobis renders no opinion as to the presence of hazardous wastes or the presence of indirect evidence of hazardous wastes in that portion of the site.
- 4) No property boundary, site feature or topographic surveys of the site were performed by Nobis unless specifically indicated in the text of the report.
- 5) No sampling or testing was performed for the presence of pesticides, herbicides, radon, lead paint, urea-formaldehyde, asbestos or polychlorinated biphenyls (PCBs) at the site.
- 6) The purpose of this investigation was to assess the physical characteristics of the subject site with respect to the presence of hazardous wastes in the environment within the context of Vermont Groundwater Enforcement Standards and the Investigation and Remediation of Contaminated Properties Rule. No attempt was made to check the compliance of present or past owners of the site with federal, state or local laws.
- 7) The observations and conclusions contained in this report are based in part upon data obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration is performed. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.
- 8) Water level readings have been made in the monitoring wells at the times and under the conditions stated in this report. Fluctuations in groundwater levels will occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.
- 9) Except as noted within the text of the report, no quantitative laboratory testing was performed as part of this assessment. Where analyses have been conducted by an outside laboratory or

engineering firm, Nobis has relied upon the data provided and has not conducted an independent evaluation of the reliability of these data.

- 10) Chemical analyses have been performed for specific parameters during these environmental services, as described in the text of the report. Additional chemical constituents not searched for during the current study may be present in soil and/or groundwater at the site.
- 11) These environmental services have been prepared for the exclusive use of KS Pine, LLC and the Vermont DEC solely for use in an environmental evaluation of the site. This report shall not, in whole or in part, be conveyed to any other party without prior written consent of Nobis. This report shall not be construed to create any warranty or representation that the real property on which the investigation was conducted is free of pollution or complies with any or all applicable regulatory or statutory requirements, or that the property is fit for any particular purpose. No third party is entitled to rely upon any information or opinions contained in the report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and

EXECUTIVE SUMMARY

identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/29/2020 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/29/2020 has revealed that there are 3 SEMS sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/15/2020 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EPA ID:: VTD002083434

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/15/2020 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2020 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 4 RCRA-VSQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

VT SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Vermont Hazardous Waste Sites List.

A review of the VT SHWS list, as provided by EDR, and dated 06/09/2020 has revealed that there are 46 VT SHWS sites within approximately 1 mile of the target property.

500 PINE STREET	500 PINE STREET	N 1/8 - 1/4 (0.158 mi.)	B7	103

EXECUTIVE SUMMARY

Facility ID: 20164629

Contamination: PAH

Project Status:: Property currently houses the Jackson Terrace Apartment building. Phase I/II ESA completed for potential property transaction. Groundwater exceedance of benzo(a)pyrene in one well on north end of property. Additional groundwater investigation recommended by consultant. Work scope accepted April 2016. Limited contamination detected. SMAC with Notice to Land Record.

453 PINE STREET LLC	453 PINE ST	N 1/8 - 1/4 (0.186 mi.)	B16	153
Facility ID: 20043192				
Contamination: Coal Tar				
Project Status:: Brownfields Project: TarGOST survey was conducted by Stone to delineate the extent of NAPL. Geo-Design and Weston & Sampson have conducted geotechnical surveys of site. These data will be used to allow design of a building that will not affect Pine St remedy. Further work was completed in 2014 -2015 to better refine NAPL extentDraft site construction plan developed in 2015Stone developed and began implementing a groundwater and NAPL monitoring plan in late summer 2015 to develop a baseline to use during construction to determine if construction could be affecting NAPL and or groundwater flow as well as Pine St remedy				
GENERAL ELECTRIC COM	LAKESIDE AVENUE	SW 1/8 - 1/4 (0.194 mi.)	D18	156
Facility ID: 770041				
Contamination: Non-Petroleum				
Project Status:: Rcrs Corrective Action Permit PendingRCRA correctiue action permit granted. All work required by permit was completed and the site received a SMAC designation in May 2006				
* PINE STREET BARGE	PINE STREET	NW 1/8 - 1/4 (0.202 mi.)	E23	166
Facility ID: 770042				
Contamination: Coal Tar				
Project Status:: ROD has been finalized. Consent Decree signed 9/30/99. Remedial design commences fall 99. Cleanup will commence in spring 2001.				
FORMER BELL AIRCRAFT	LAKESIDE AVENUE	SSW 1/8 - 1/4 (0.221 mi.)	D27	174
Facility ID: 770039				
Contamination: Non-Petroleum				
Project Status:: Site Considered Part Of General Electric Lakeside Avenue Site				
QUEEN CITY PRINTERS	175 LAKESIDE	S 1/8 - 1/4 (0.222 mi.)	G31	187
Facility ID: 911069				
Contamination: Diesel, Gasoline, Other Petroleum, Waste Oil				
Project Status:: Property underwent long term ground water monitoring to track petroleum plume. Redevelopment in summer 2011 for Champlain College - Miller Center. Ongoing site work reveals no apparent impact to identified receptors. Site eligible for SMAC. Letter issued 4/20/2012.				
BURLINGTON CITY ARTS	405 PINE STREET	N 1/8 - 1/4 (0.250 mi.)	F45	382
Facility ID: 20194876				
Project Status:: Phase I and II submitted. CAP will be needed for redevelopment.				
THE VAULTS 400 PINE	400 PINE STREET	N 1/4 - 1/2 (0.266 mi.)	I48	392
Facility ID: 20174708				
Contamination: Arsenic, PAH				
Project Status:: Site walk for Phase I ESA conducted 5/9/2017. Phase I report finalized May 2017. Work plan for Phase II submitted, reviewed, and re-submitted with revisions. CAP and additional sampling effort submitted (combination). Reviewed, comment letter returned, and revision received 3/23 and second revision 3/29/2018. Public comment period started 3/30/2018. CAP Completion report received 8/2018. Awaiting monitoring well closure report. SMAC in draft phase.				
WOODAMAN PROPERTY	8 GOVE COURT	ESE 1/4 - 1/2 (0.287 mi.)	49	393
Facility ID: 20104056				
Contamination: Arsenic, Lead, Other Metals, Waste Oil				
Project Status:: Surface contamination encountered during a limited site investigation, which appears to be associated with occasional automobile maintenance at the property. Two oil stained areas were excavated and soils were drummed for disposal. Groundwater monitoring points installed in these areas had no exceedances of VGES for metals, VOCs or TPH following the excavation activity. Arsenic concentrations at this site appear to be related to regional background levels. All properties in the area are served by municipal drinking water. No floor drains were identified in the garage.

EXECUTIVE SUMMARY

Project Status: Contamination discovered during the closure of a heating oil UST. It was originally speculated that there had been a gasoline release in the vicinity of the UST due to high PID readings, but the VOC analysis indicated a profile similar to heating oil. Investigation at this site included a boring into a sump in the warehouse floor. No elevated VOCs were encountered during the installation of this boring. Napthalene remains slightly above the VGES in the vicinity of the heating oil UST, but has declined steadily over three sampling events. No elevated PIDs recorded from the indoor air screening event. This property and all adjacent properties are served by the municipal drinking water system.

BURLINGTON FOOD SERV	PINE ST.	S 1/4 - 1/2 (0.403 mi.)	N68	476

Project Status: Site Closed

Facility Id: 890383

BILMAR TEAM CLEANERS	150 SHELBURNE RD.	SE 1/4 - 1/2 (0.416 mi.)	69	476

Contamination: Gasoline

Project Status: Property has long history as a gas/service station dating back to the early 1900's. Several UST configurations have existed through the years. Last gas station exploded in 1972- property turned into residential use following this event. Phase II at the site found extensive petroleum contamination at the site. Groundwater monitoring conducted periodically from late nineties-2007. Most recent monitoring event was completed during Summer, 2007. Contaminant concentrations near the property boundary exceed the VT Groundwater Enforcement Standards in two wells. Gasoline contamination does not appear to have impacted the areas surrounding the onsite rental unit. Ongoing monitoring required at this site to track contaminant levels. Downgradient points need to be established to determine extent of groundwater contamination. Some contamination may exist below Route 7 (Shelburne Rd).

Facility Id: 941631

FORMER PIERRES REPAI	53 SEARS LANE	SSW 1/4 - 1/2 (0.425 mi.)	70	477

Contamination: Heating Oil, Other Petroleum, Waste Oil

EXECUTIVE SUMMARY

Project Status: Petroleum contamination from two underground storage tanks. Ongoing monitoring reveals declining contaminant plume. Biennial site monitoring with next by June 2019. Based on results, evaluate for SMAC.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 7 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 09/30/2017 has revealed that there is 1 2020 COR ACTION site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 01/01/2019 has revealed that there are 2 NY MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

Summary Details:

Conditions at listing October 1981): The Pine Street Canal Site covers 30 acres of partially filled wetland bordering an abandoned shipping canal (Pine Street Canal) and Lake Champlain in Burlington, Vermont. In 1906, a coal gasification plant began operating on Pine Street, southeast of the canal. There is evidence that residual oil and wood chips saturated with organic compounds were disposed of in the Pine Street Canal wetland. During the 1960s and early 1970s, an oil-like material was detected seeping from the wetland into Pine Street Canal, Barnes Basin, and Maltex Pond. The State detected high levels of organic compounds associated with coal tar at several locations on the site, which is along the proposed location of a portion of a major highway. The State is concerned that construction will release organic compounds to the canal and possibly to Lake Champlain, the source of Burlington's drinking water. This is the top priority site in Vermont. Status July 1983): EPA is preparing a Remedial Action Master Plan outlining the investigations needed to determine the full extent of cleanup required at the site. At the same time, it is searching for parties

Hazardous Waste Summary:

Waste Code: D000

Waste Description: Not Defined

Waste Code: D001

Waste Description: IGNITABLE WASTE

Waste Code: D038

Waste Description: PYRIDINE

Waste Code: D039

Waste Description: TETRACHLOROETHYLENE

Waste Code: F003

Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: U151

Waste Description: MERCURY

Priority: LOW - Site with contamination to soils or groundwater, but no effect on sensitive receptors
Staff: Michael Smith
Closure Date: Not reported
Site Use: Not reported
site Status: Brownfields - BRELLA
Contamination: Coal Tar
Institutional Control: Deed Restriction
Record Last Update: 12/06/2018
Project Status: Brownfields Project: TarGOST survey was conducted by Stone to delineate the extent of NAPL. Geo-Design and Weston & Sampson have conducted geotechnical surveys of site. These data will be used to allow design of a building that will not affect Pine St remedy. Further work was completed in 2014 -2015 to better refine NAPL extentDraft site construction plan developed in 2015Stone developed and began implementing a groundwater and NAPL monitoring plan in late summer 2015 to develop a baseline to use during construction to determine if construction could be affecting NAPL and or groundwater flow as well as Pine St remedy

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:

F002

Waste Description:

THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:

F003

Waste Description:

THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:

F005

Waste Description:

THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:

F006

Waste Description:

WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code:

F007

Waste Description:

SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code:

F008

Waste Description:

PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D006
Waste Description: CADMIUM

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005

Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006

Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007

Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: F008

Waste Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F009

Waste Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F010

Waste Description: QUENCHING BATH RESIDUES FROM OIL BATHS FROM METAL HEAT TREATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F017

Waste Description: Not Defined

Waste Code: F018

Waste Description: Not Defined

Waste Code: U121

Waste Description: METHANE, TRICHLOROFLUORO- (OR) TRICHLOROMONOFUOROMETHANE

Waste Code: U219

Waste Description: THIOUREA

Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Closure Desc: Not reported
UST Facility Id: Not reported
Lat/Long: Not reported
Comments: A CFI gas technician was on site to address an issue with the digital pump topper price sign and found a light drip of product from the RUL line secondary. There was minimal accumulation of product in the under dispenser containment which the tech was able to remove with an absorbent pad

Action: The RUL STP was shut down and Tanknology was dispatched to perform an emergency line test. Tanknology verified the line leak yesterday afternoon and the RUL STP remains down pending repairs.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Past Use: Multistory -
Property Description:

Site was originally a natural fiber bristle and brush factory. It was converted into industrial "incubator" space in the 1970's. Site is currently homes to artist studio space, office space, retail and performance studio space. EB & AC Whiting Company. Property has been in the Unsworth Family (Howard Space Partnership, LLP) for most of the past 100 years. Based on its location in a former industrial and manufacturing area of the City and its proximity to known contaminated sites in the area there is a likelihood of the presence of "urban" soils.

Address: 8 GOVE COURT
City,State,Zip: BURLINGTON, VT
Facility ID: 20104056
Source Type: Spill
Priority: SMAC - Site Management Activities Completed
Staff: Ashley Desmond
Closure Date: 09/07/2010
Site Use: Garage
site Status: Voluntary Action
Contamination: Arsenic, Lead, Other Metals, Waste Oil
Institutional Control: Not reported
Record Last Update: 09/09/2010
Project Status: Surface contamination encountered during a limited site investigation, which appears to be associated with occasional automobile maintenance at the property. Two oil stained areas were excavated and soils were drummed for disposal. Groundwater monitoring points installed in these areas had no exceedances of VGES for metals, VOCs or TPH following the excavation activity. Arsenic concentrations at this site appear to be related to regional background levels. All properties in the area are served by municipal drinking water. No floor drains were identified in the garage.

LUST:

Name: SWISH FACILITY
Address: 703 PINE ST
City,State,Zip: BURLINGTON, VT
Facility ID: 20073730
Source: UST-Heating Oil
Closure Date: 05/06/2008
Priority: SMAC - Site Management Activities Completed
Staff: Ashley Desmond
Source: UST-Heating Oil
Site Use: Business
Site Status: Not reported
Contamination: Gasoline, Heating Oil
Institutional Control: Not reported
Record Last Update: 11/16/2007
Project Status: Contamination discovered during the closure of a heating oil UST. It was originally speculated that there had been a gasoline release in the vicinity of the UST due to high PID readings, but the VOC analysis indicated a profile similar to heating oil. Investigation at this site included a boring into a sump in the warehouse floor. No elevated VOCs were encountered during the installation of this boring. Napthalene remains slightly above the VGES in the vicinity of the heating oil UST, but has declined steadily over three sampling events. No elevated PIDs recorded from the indoor air screening event. This property and all adjacent properties are served by the municipal drinking water system.

Property Description:

A Phase I has not yet been completed, however, to our knowledge the property was developed in the early 1900's and used historically to house the City of Burlington's Street Department. More recently, the property has been (and is currently) leased to a recycled building materials facility (Re-Source); the Chittenden Solid Waste District (drop off center), and is used for materials and street sweeping storage by then City. Several bays in the historic brick building have been used periodically for arts space and for City archives.

Waste Code:	P044
Waste Description:	DIMETHOATE (OR) PHOSPHORODITHIOIC ACID, O,O-DIMETHYL S-[2-(METHYLAMINO)-2-OXOETHYL] ESTER
Waste Code:	P051
Waste Description:	2,7:3,6-DIMETHANONAPHTH[2,3-B]OXIRENE, 3,4,5,6,9,9-HEXACHLORO-1A,2,2A,3,6,6A,7,7A-OCTAHYDRO-, (1AALPHA, 2BETA, 2ABETA, 3ALPHA, 6ALPHA, 6ABETA, 7BETA, 7AALPHA)- & METABOLITES (OR) ENDRIN (OR) ENDRIN, & METABOLITES
Waste Code:	P056
Waste Description:	FLUORINE
Waste Code:	P070
Waste Description:	ALDICARB (OR) PROPANAL, 2-METHYL-2-(METHYLTHIO)-, O-[(METHYLAMINO)CARBONYL]OXIME
Waste Code:	P075
Waste Description:	NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS
Waste Code:	P098
Waste Description:	POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)
Waste Code:	P104
Waste Description:	SILVER CYANIDE (OR) SILVER CYANIDE AG(CN)
Waste Code:	P106
Waste Description:	SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)
Waste Code:	P108
Waste Description:	STRYCHNIDIN-10-ONE, & SALTS (OR) STRYCHNINE, & SALTS
Waste Code:	P114
Waste Description:	SELENIOS ACID, DITHALLIUM (1+) SALT (OR) THALLIUM(I) SELENITE
Waste Code:	U002
Waste Description:	2-PROPANONE (I) (OR) ACETONE (I)
Waste Code:	U011
Waste Description:	1H-1,2,4-TRIAZOL-3-AMINE (OR) AMITROLE
Waste Code:	U036
Waste Description:	4,7-METHANO-1H-INDENE, 1,2,4,5,6,7,8,8-OCTACHLORO-2,3,3A,4,7,7A-HEXAHYDRO- (OR) CHLORDANE, ALPHA & GAMMA ISOMERS
Waste Code:	U044
Waste Description:	CHLOROFORM (OR) METHANE, TRICHLORO-
Waste Code:	U051
Waste Description:	CREOSOTE
Waste Code:	U061
Waste Description:	BENZENE, 1,1'-(2,2,2-TRICHLOROETHYLIDENE)BIS[4-CHLORO- (OR) DDT

Waste Description:	BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE
Waste Code:	U114
Waste Description:	CARBAMODITHIOIC ACID, 1,2-ETHANEDIYLBIS-, SALTS & ESTERS (OR) ETHYLENEBISDITHIOCARBAMIC ACID, SALTS & ESTERS
Waste Code:	U122
Waste Description:	FORMALDEHYDE
Waste Code:	U129
Waste Description:	CYCLOHEXANE, 1,2,3,4,5,6-HEXACHLORO-, (1ALPHA, 2ALPHA, 3BETA, 4ALPHA, 5ALPHA, 6BETA)- (OR) LINDANE
Waste Code:	U134
Waste Description:	HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)
Waste Code:	U154
Waste Description:	METHANOL (I) (OR) METHYL ALCOHOL (I)
Waste Code:	U170
Waste Description:	P-NITROPHENOL (I,T) (OR) PHENOL, 4-NITRO-
Waste Code:	U173
Waste Description:	ETHANOL, 2,2'-(NITROSOIMINO)BIS- (OR) N-NITROSODIETHANOLAMINE
Waste Code:	U211
Waste Description:	CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-
Waste Code:	U213
Waste Description:	FURAN, TETRAHYDRO-(I) (OR) TETRAHYDROFURAN (I)
Waste Code:	U216
Waste Description:	THALLIUM CHLORIDE TLCL (OR) THALLIUM(I) CHLORIDE
Waste Code:	U219
Waste Description:	THIOUREA
Waste Code:	U220
Waste Description:	BENZENE, METHYL- (OR) TOLUENE
Waste Code:	U239
Waste Description:	BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)
Waste Code:	U240
Waste Description:	2,4-D, SALTS & ESTERS (OR) ACETIC ACID, (2,4-DICHLOROPHENOXY)-, SALTS & ESTERS (OR) DICHLOROPHENOXYACETIC ACID 2,4-D
Waste Code:	U244
Waste Description:	THIOPEROXYDICARBONIC DIAMIDE [(H2N)C(S)]2S2, TETRAMETHYL- (OR) THIRAM
Waste Code:	U247
Waste Description:	BENZENE, 1,1'-(2,2,2-TRICHLOROETHYLIDENE)BIS[4-METHOXY- (OR) METHOXYCHLOR
Waste Code:	U248
Waste Description:	2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYL-BUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS OF 0.3% OR LESS (OR) WARFARIN, & SALTS,

extensive petroleum contamination at the site. Groundwater monitoring conducted periodically from late nineties-2007. Most recent monitoring event was completed during Summer, 2007. Contaminant concentrations near the property boundary exceed the VT Groundwater Enforcement Standards in two wells. Gasoline contamination does not appear to have impacted the areas surrounding the onsite rental unit. Ongoing monitoring required at this site to track contaminant levels. Downgradient points need to be established to determine extent of groundwater contamination. Some contamination may exist below Route 7 (Shelburne Rd).

Project Status: Contamination discovered during the removal of a 10,000-gallon heating oil UST. Nine groundwater monitoring wells were installed in the vicinity of the former tank. . Free product present in source area, but has been removed through bailing and sorbents. No significant gw impact outside of tank area. The last two groundwater monitoring events showed no contaminant concentrations above the VGES, with the exception of MW-2, which had a concentration of naphthalene slightly above 20 ppb. All properties in this area are served by the municipal drinking water system.

Closure Date: 11/21/2008
Site Use: Not reported
site Status: Voluntary Action
Contamination: Not reported
Institutional Control: Not reported
Record Last Update: 06/20/2013
Project Status: Release detected during the closure of a heating oil UST. No groundwater/soil contamination was detected in the two monitoring wells that were sampled. Contamination was stable between the monitoring events. There is limited risk to receptors in this area from any residual contamination. This property is served by the municipal water system. The onsite building was screened using a PID and showed no detection of contamination. Monitoring wells have been properly closed.

Staff: Lynda Provencher
Closure Date: Not reported
Site Use: Business
site Status: Brownfields - BRELLA
Contamination: Lead, Other
Institutional Control: Not reported
Record Last Update: 04/02/2019
Project Status: Redevelopment of the 298 college Street property into the YMCA. A Phase I was conducted in 2015 and no RECs were identified. Subsurface soil sampling was conducted in 2015 for metals and PAHs, and 600 mg/kg of lead was detected at 6'8' in one sample (in excess of residential concentrations but below industrial concentrations). PAHs were detected above risk-based residential concentrations but below industrial risk based concentrations and urban background. Additional soil sampling is planned for the week of January 29th. Samples will be analyzed for VOCs, SVOCs, PAHs, PCBs and pH.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2020	Source: EPA
Date Data Arrived at EDR: 08/03/2020	Telephone: N/A

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/29/2020

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/29/2020

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/29/2020	Source: EPA
Date Data Arrived at EDR: 08/03/2020	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/15/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/22/2020	Telephone: (888) 372-7341
Date Made Active in Reports: 09/18/2020	Last EDR Contact: 09/22/2020

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2020	Source: Environmental Protection Agency

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Local Land Records

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

USGS TOPOGRAPHIC MAP

Target Property Map:	5645391 BURLINGTON, VT
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BURLINGTON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Ordovician
Series: Lower Ordovician and Cambrian carbonate rocks
Code: OC (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: VERGENNES

Soil Surface Texture: clay

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained. Soils have a layer of low hydraulic conductivity, wet state high in the profile. Depth to water table is 3 to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Elastic silt.	Max: 0.60 Min: 0.06	Max: 7.30 Min: 4.50
2	6 inches	16 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Elastic silt.	Max: 0.20 Min: 0.00	Max: 7.30 Min: 4.50
3	16 inches	29 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Elastic silt.	Max: 0.20 Min: 0.00	Max: 8.40 Min: 5.60
4	29 inches	65 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Elastic silt.	Max: 0.06 Min: 0.00	Max: 8.40 Min: 7.90

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silty clay
loam
fine sandy loam
silt loam
loamy sand

Surficial Soil Types: silty clay
loam
fine sandy loam
silt loam
loamy sand

Shallow Soil Types: loam
channery - silt loam

Deeper Soil Types: unweathered bedrock
sandy loam
gravelly - loam
silty clay loam
silt
silt loam
loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

very fine sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 802-882-3001

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Vermont Public Drinking Water Sources

Source: ANR, Water Supply Division

Telephone: 802-241-3406

Well Driller Report Database

Source: Dept of Environmental Conservation, Water Resource

Telephone: 802-585-4907

Private wells in this layer come from the Department of Environmental Conservation's Water Supply Data Composite.

Managed by the Water Supply Division's Well Driller and Well Location Program, the database contains private well information submitted by Vermont licensed well drillers.

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Nobis Group were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Nobis Group were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

		The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on **10/22/2020 at 4:59 PM** and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

A P P E N D I X D

ASTM E 1527-13 PHASE I ENVIRONMENTAL SITE ASSESSMENT

USER QUESTIONNAIRE

Section 1 – General

The information requested in this section is intended to assist the environmental professional but is not necessarily required to qualify for one of the Landowner Liability Protections (See Section 2).

(1) Why is the Phase I Environmental Site Assessment required?

VT DEC Request

(2.) What is the type of property and type of property transaction (sale, purchase, exchange, etc.)?

Purchase of Commercial Land

(3.) What is the complete and correct address of the property?

501 Pine Street Burlington VT

(4.) What is the scope of services desired for the Phase I?

As described in the contract / work scope YES ____

If No, please explain.

Are any considerations beyond the requirements of Practice E 1527 to be addressed?

NO

(5.) Please identify all parties who will rely on the Phase I report.

VT DEC
KS PINE LLC

(6.) Please identify the site contact and how the site contact can be reached.

James Mullowney VGS-802-881-7707

(7.) Are there any special terms and conditions that must be agreed upon by the environmental professional? **UNKNOWN**

(8.) Do you have any knowledge or experience with the property that may be pertinent to the environmental professional (prior environmental reports, documents, correspondence, etc. concerning the environmental condition of the property). Attach additional sheets if required.

UNKNOWN

(9) Does the user intend to retain a title company or title professional to review reasonable ascertainable title and judicial records for environmental liens or activity and use limitations (AULs)?

YES

If Yes, will the results of the review be provided to the environmental professional?

UNKNOWN

Section 2 - Landowner Liability Protections

In order to qualify for one of the Landowner Liability Protections (LLPs)¹ offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

¹ Landowner Liability Protections, or LLPs, is the term used to describe the three types of potential defenses to Superfund liability in EPA's Interim Guidance Regarding Criteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability ("Common Elements" Guide) issued on March 6, 2003.

(1.) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

UNKNOWN

(2.) Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs , such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

UNKNOWN

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? If "yes", please explain.

(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

Price is considering contamination

(5.) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

UNKNOWN

(a.) Do you know the past uses of the property?

UNKNOWN

(b.) Do you know of specific chemicals that are present or once were present at the property?

UNKNOWN

(c.) Do you know of spills or other chemical releases that have taken place at the property?

UNKNOWN

(d.) Do you know of any environmental cleanups that have taken place at the property?

UNKNOWN

(6.) The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

UNKNOWN

User Signature

I have answered the above questions in good faith and based on my knowledge of the property.
