Poultney, VT 05764

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has reviewed the results of environmental investigations and remedial activities at the Staco site in Poultney, Vermont, (SMS site # 77-0017). Based on this data and current site conditions, the SMS has determined the following:

- The contaminated soils and builds at this site have been adequately remediated;
- mercury is no longer detectable in groundwater,
- the chlorinated groundwater plume no longer migrates past the property boundary and is being adequately remediated by natural attenuation, and
- deed restrictions prevent excavation on this site without the prior approval of the Agency of Natural Resources.

Based on these findings, the SMS has concluded that this site is eligible for a designation of "Site Management Activity Completed" (SMAC). This SMAC designation does not release the responsible parties from any past or future liability associated with the contamination discovered on this site. It does, however, mean that the SMS is not requesting any additional work at this time.

Sincerely,

George Desch, P.E.
Sites Management Section Chief
