RE: Site Management Activity Completed, Young Residence, Westminster West, Vermont
(site #90-0477)

Dear Ms. Young:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has received and reviewed the December 6, 2000 sampling results of your water supply concerning the above referenced site. Based on a review of the file, the current conditions at this site and the results of the additional information obtained, the SMS has determined that this site meets the Waste Management Division's Sites Management Activities Complete (SMAC) policy.

This means that the SMS has determined the following:

- the source of the potential contamination at this site was never identified but appears to have been mitigated by time;
- drinking water standards have been met and no odor remains in your water supply;
- the site does not pose an unreasonable risk to human health or the environment.

Based on these findings, the site has been assigned a Site Management Activities Completed (SMAC) designation. Sites which the Waste Management Division has determined require no further management are classified as SMAC. This designation does not release you from any past or future liability which may arise from the petroleum contamination which was identified in your well at this site. It does mean that the SMS is not requiring any additional work be performed at this site in response to the 1989 release. If any additional information comes to light in the future, then the SMS may reconsider this determination.
