RE: Site Management Activity Completed, Campbell's Garage  
Chelsea, Vermont (site #91-1014)

Dear Mr. Pushee:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has received and reviewed the Lincoln Applied Geology, Inc. (LAG) report dated June 25, 1997 and the follow-up sample results dated February 12, 1998 concerning the above referenced site. Based on the current conditions at this site and the results of the LAG report, the SMS has determined that this site meets the Waste Management Division's Sites Management Activities Complete (SMAC) policy.

This means that the SMS has determined the following:

- the sources of the contamination at this site have been adequately characterized and remediated (the leaking underground storage tank systems have been removed and all free phase product has been recovered and groundwater has been remediated);
- the site does not pose an unreasonable risk to human health or the environment (a new public water supply has been developed for the town and the existing DW wells located near the site have been protected; with three of the DW wells having been abandoned and the last one protected);
- sampling of groundwater does not show any impacts on groundwater above Vermont Groundwater Enforcement Standards at the site.

Based on these findings, the site has been assigned a Site Management Activities Completed (SMAC) designation. Sites which the Waste Management Division has determined require no further management are classified as SMAC. This designation does not release the Bradford Oil Company from any past or future liability which may arise from the petroleum contamination which originated from the leaking underground storage tank systems and spills at this site. It does mean that

the SMS is not requiring any additional work be performed at this site in response to the 1991 release. If any additional information comes to light in the future, then the SMS may reconsider this determination.

If you have any questions concerning this matter, please feel free to contact Richard Spiese or me at (802) 241-3888.

Sincerely,

George Desch, P.E., Chief  
Sites Management Section
