RE: Drinking Water Sampling Results, Former Tron Residence, E. Dorset
(site #91-1030)

Dear Mr. Esposito:

The Vermont Department of Environmental Conservation, Hazardous Materials Management Division (HMMD) sampled your drinking water well on August 29, 1994. The drinking water samples were analyzed for volatile organic compounds and semi-volatile organic compounds.

The results from these analysis (copies enclosed) showed no identifiable contaminants in your drinking water well above the detection limits of the laboratory.

Based on these results, the HMMD is designating this site as "Site Management Activities Complete." This designation will remove this site from the HMMD Active Sites List. Additionally, this means that the HMMD is not requiring or performing any additional work at this site. The completion of these activities does not release any potentially responsible parties from any past or future liability which may originated from any contamination at this site.

If you have any questions concerning this matter, please feel free to contact me.

Sincerely,

Chuck Schwer, Acting Chief
Sites Management Section
