RE: Site Management Activity Completed, Rodd Roofing, St. Johnsbury (site #92-1223)

Dear Mr. Rodd:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has received your letter regarding the thin spreading of the petroleum contaminated soils at your business. Based on this information, the SMS has assigned a Sites Management Activities Complete (SMAC) designation for the Rodd Roofing site located in St. Johnsbury

This means that the SMS has determined the following:

- The source of the petroleum contamination (the four underground storage tanks) was removed in 1992;
- There is no indication that groundwater at the site was affected;
- The site does not present a current threat to human health or the environment.

Based on these findings, the site has been assigned a Site Management Activities Completed (SMAC) designation. Sites which the Waste Management Division has determined require no further management are classified as SMAC. This designation does not release Rodd Roofing from any past or future liability which may arise from any contamination which may be present at the facility. It does mean that the SMS is not requiring any additional work be performed at this site in response to the contamination discovered in 1992. If any additional information comes to light in the future, then the SMS may reconsider this determination.

If you have any questions concerning this matter, please feel free to contact Richard Spiese or me at (802) 241-3888.

Sincerely,

George Desch, P.E., Chief
Sites Management Section
