Dear Mr. Schwer:

We received your letter of July 21, 1992 regarding the removal of our underground storage tank. We are not sure where you have received your information concerning the amount of soil contamination. The assessment that we received from Tom Boise of Boise Excavating was for approximately 30 gallons of waste pumpage, which was contained in one 55 gallon drum. This drum has already been removed from our site and disposed of by Pollution Solutions. Please see the enclosed copies of related paperwork concerning the removal and disposal of the one 55 gallon drum of contaminated material. Please contact us concerning this issue as soon as possible. Thank you.

Sincerely,

William R. Hauke, Jr.
