RE: Site Management Activity Completed for Berbee Salvage / Site #931368

Dear Mr. Eaton:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has reviewed the November 1995 water quality sampling results collected from the onsite monitoring wells and neighboring supply wells regarding the Berbee Salvage site. These samples were collected and submitted by the Johnson Company under contract with the State of Vermont. Based on the results of this sampling, the SMS has determined the following:

- The groundwater beneath and in the vicinity of the site is not significantly impacted by the release of petroleum on your property. The last round of water quality monitoring indicates that MW1 contains 1 ppb MTBE and the water supply wells contained no presence of petroleum contamination.
- Currently, there is no known quantifiable impact or risk to identified receptors from the contamination that has been observed on your property.

Based on the findings, the SMS has determined that site management activities have been completed. However, the completion of these activities do not release you from any past or future liability which may arise from the petroleum contamination originating from your property. It does mean that the SMS is not requiring any additional work be performed at this site in response to this release.

If you have any questions, then please feel free to contact Linda Elliott or myself at 802-241-3888.

Sincerely,

Chuck Schwer, Acting Chief
Sites Management Section
