Re: Request for "SMAC" classification.  
Old Movie House, Inc., Brattleboro, Site #93-1523

Dear Mr. Schwer:

On August 10, 1994, ENSA Environmental, Inc. (ENSA) collected 8 soil samples from the contaminated soil stockpile at the above mentioned site. The soils were screened using a Thermo Environmental Instruments Organic Vapor Meter (OVM) calibrated to benzene. Vermont State protocol for headspace analysis was used to detect soil vapor concentrations. Results of this screening showed that all spots tested between 3.1 and 14.0 ppm to a depth of 18" - 36" in each location.

Upon SMS approval and the approval of the Windham Solid Waste Management District landfill facility, the stockpiled soils were removed from the Paramount Theater Building property and brought to the landfill on November 1, 1994.

On behalf of our client, ENSA is now requesting that this site be considered for a "site management activity completed" (SMAC) classification as required work has been completed.

Should you have any questions please feel free to call me.

Sincerely,  
ENSA Environmental, Inc.

Bruce E. Tease, Ph. D.  
Senior Environmental Scientist
