RE: Site Management Activity Completed (SMAC) Designation for the Bove/Fagan Ice Cream in Williston (Site #94-1614)

Dear Mr. Bove:

The Sites Management Section (SMS) has received Griffin International, Inc.'s "Site Assessment Report" dated April, 1996 for the above referenced site. Based on the information in the report, the SMS has determined that the Bove/Fagan Ice Cream site in Williston is eligible for a Site Management Activity Completed (SMAC) designation. This determination was based on the following information:

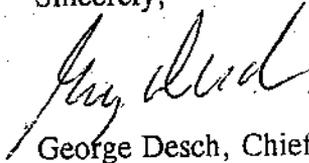

1. The likely source of petroleum contamination at the site were the two 2,000 gallon underground storage tanks (USTs) containing gasoline. These USTs were removed from the ground on June 6, 1994.
2. Petroleum compounds are not present in groundwater at levels which exceed Vermont Groundwater Enforcement Standards, with the exception of MW-1, which is located in the former UST pit. The most downgradient monitoring well, MW-4, does not contain petroleum compounds in excess of Groundwater Enforcement Standards.
3. Little risk is posed to sensitive receptors in the area from the residual soil and groundwater contamination which remains at the site.

Based on the results of the investigation, the site has been assigned a Site Management Activity Completed (SMAC) designation. Sites which the Waste Management Division have determined require no further management are give a SMAC designation. The designation does not release the Bove/Fagan Ice Cream Distributors, Inc. from any past or future liability which may arise from the petroleum contamination which originated from the former USTs at the Bove/Fagan Ice Cream site in Williston. The SMAC designation does mean that the SMS

isn't requiring any additional work be performed at this site in response to the initial contamination.

Please feel free to contact either me or Chuck Schwer with any further questions or comments you may have.

Sincerely,

George Desch, Chief  
Sites Management Section
