RE: Site Management Activity Completed, Mad River Glen Ski Area (site #94-1696)

Dear Mr. Mazze:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has received and reviewed the June 4, 1996 summary report from Griffin International, Inc. (Griffin) on the status of the stockpiled soils at the above mentioned site. This report requested that the above referenced site be designated as having Site Management Activity Completed (SMAC). Based on the current conditions at this site and the information contained in this report, the SMS has determined that you have met the conditions of the Waste Management Division's October 24, 1994 letter.

This means that the SMS has determined the following:

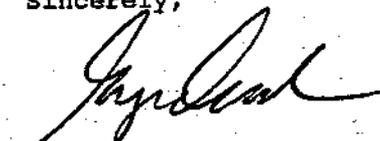

- the source of the contamination at this site was adequately defined in nature and extent during the September, 1994 underground storage tank removal;
- the sources of contamination at this site (the underground storage tanks and the 12 cubic yards of grossly contaminated soils) have been either removed or adequately remediated;
- the site no longer poses an unreasonable risk to human health or the environment.

Based on these findings, the site has been assigned a Site Management Activities Completed (SMAC) designation. Sites which the Waste Management Division have determined require no further management are classified as SMAC. This designation does not release the Mad River Glen Cooperative from any past or future liability which may arise from the petroleum contamination which originated from the leaking underground storage tanks at this site. It does mean that the SMS is not requiring any additional work be performed at this site in response to the 1994 release.

Bob Mazza Letter
