RE: Site Management Activity Completed, McGaffrey's Sunoco, Burlington, Vermont  
(site #94-1698)

Dear Mr. Vogel:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has received a phone request from Kevin McGraw of Griffin International, Inc. concerning the status of the above referenced site. Based on a review of the site file, the current conditions at this site and the results of the Griffin reports, the SMS has determined that this site meets the Waste Management Division's Sites Management Activities Complete (SMAC) policy.

This means that the SMS has determined the following:

- the source of the contamination at this site has been adequately characterized and remediated (the leaking underground storage tank system has been removed and the approximately 35 cubic yards of contaminated soil from the site has been adequately treated and disposed);
- the site does not pose an unreasonable risk to human health or the environment;

Based on these findings, the site has been assigned a Site Management Activities Completed (SMAC) designation. Sites which the Waste Management Division has determined require no further management are classified as SMAC. This designation does not release McCaffrey's Sunoco from any past or future liability which may arise from the petroleum contamination which originated from the leaking underground storage tank system at this site. It does mean that the SMS is not requiring any additional work be performed at this site in response to the 1994 release. If any additional information comes to light in the future, then the SMS may reconsider this determination.
