RE: Site Management Activity Completed, AT&T - Graniteville, Williamstown, VT (Site #94-1729)

Dear Mr. Karantzalis:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has received the Lincoln Environmental, Inc. June 21, 1995 letter and Bill of Lading documenting the transport and disposal of 22 tons of petroleum contaminated soil from the above referenced site to Environmental Soil Management, Inc. (ESMI) in Loudon, New Hampshire. This soil was generated during the removal of a #2 fuel oil underground storage tank (UST) on November 30, 1994. All petroleum contaminated soil encountered during the UST removal was excavated and later disposed of as cited above. Based on the current conditions at this site, the SMS has determined that this site is now eligible for a SMAC (Site Management Activity Completed) designation. This means that the SMS has determined the following:

- the 3,000-gallon #2 fuel oil UST has been removed from the ground, and is no longer a continuing source of petroleum contamination at this site;
all petroleum contaminated soil was removed from the ground and transported to ESMI for thermal desorption processing;
groundwater was not encountered during the investigation, and the removal of the petroleum contaminated soil mitigated any risk of impact to it; and
any residual contamination does not pose an unacceptable risk to human health or the environment.

Based on these findings, the SMS has determined that site management activities have been completed. The completion of these activities does not release AT&T of any past or future liability which may arise from the petroleum contamination discovered to have originated from the UST at the AT&T - Graniteville site. It does mean that the SMS is not requiring any additional work be performed in response to the contamination discovered at this site. If you have any questions or comments, please feel free to contact either me or Matt Moran at (802)-241-3888.

Sincerely,
