RE: Summary of Onsite Supply Well Sampling (VTDEC # 96-1996).

Dear Mr. Gaudette,

This letter report and attachments summarizes the results of the supply well sampling conducted at your property. This work has been conducted by Griffin International (Griffin), for Mr. Victor Gaudette of Gaudettes Market. In a letter to Mr. Gaudette from Mr. Matthew Moran of the Vermont Department of Environmental Conservation (VTDEC), dated May 3, 1996, the VTDEC requested that the on-site supply well be sampled and a related petroleum contaminated soil stockpile be periodically monitored. This letter was written following the detection of petroleum contamination during a UST removal on the subject property. Sampling of this well was conducted in accordance with the June 14, 1996 Work Plan and Cost Estimate prepared by Griffin International (Griffin). Verbal approval of this plan was obtained through a telephone conversation between Ms. Kristen Underwood of Griffin, and Mr. Moran on July 15, 1996.

According to file research conducted at the State of Vermont Water Supply Division in Waterbury, there do not appear to be any supply wells in the area, with the exception of the on-site well, which could be at risk.

On August 19, 1996 a Griffin Technician collected a water sample from the store sink. This sample was analyzed for petroleum related compounds by EPA Method 8020. All contaminants targeted by the analysis were found to be non-detect. The analytical laboratory data sheets are attached.

In conclusion, it does not appear that there is significant risk to the onsite supply well from petroleum contamination; no further supply well sampling is recommended. However, screening of the petroleum contaminated stockpiled soils at the site is to be conducted annually beginning in May of 1997.

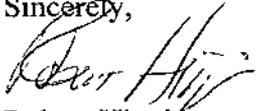

Mr. Victor Gaudette

12/17/96

REPORT OF LABORATORY ANALYSIS

CLIENT: Griffin International
PROJECT NAME: Gaudette's Market
REPORT DATE: August 28, 1996
DATE SAMPLED: August 19, 1996

PROJECT CODE: GIGM1808
REF.#: 92,707

Enclosed please find the results of the analyses performed for the samples referenced on the attached chain of custody. Chain of custody indicated sample preservation with HCl.

All samples were prepared and analyzed by requirements outlined in the referenced method and within the specified holding times. All instrumentation was calibrated with the appropriate frequency and verified by the requirements outlined in the referenced method. Blank contamination was not observed at levels affecting the analytical results.

Analytical method precision and accuracy was monitored by laboratory control standards which included matrix spike, duplicate and quality control analyses. These standards were determined to be within established laboratory method acceptance limits.

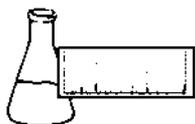

Individual sample performance was monitored by the addition of surrogate analytes to each sample. All surrogate recovery data was determined to be within laboratory QA/QC guidelines unless otherwise noted.
