RE: September 2013 POET System and Groundwater Sampling Report
Londonderry Citgo/Londonderry Shopping Center – **SMS #1996-2015**
5700 Route 100
Londonderry, Vermont

Dear Mr. Cropley:

GeoInsight, Inc. (GeoInsight) prepared this report for Summit Distributing, LLC (Summit) to summarize the September 2013 point-of-entry treatment (POET) system and groundwater monitoring event performed at the Londonderry Citgo/Londonderry Shopping Center (the Shopping Center) property located at 5700 Route 100 in Londonderry, Vermont. A site locus map is presented as Figure 1 and a site plan is presented as Figure 2. The September 2013 sampling included POET systems serving the Shopping Center and Thorne-Thomsen properties.

Also during September 2013, GeoInsight purged and collected a raw (untreated) water sample from the inactive, but recently rehabilitated Former IGA well (also known as Well #1).

GROUNDWATER SAMPLING AND ANALYSIS

Groundwater sampling activities on September 30, 2013 included gauging groundwater elevations and collecting groundwater samples from monitoring wells MW-5, MW-8, MW-10R, MW-11R, and MW-S2 (well MW-11R was dry during the monitoring event, so the well could not be sampled). Groundwater elevations were measured at these wells using an electronic water level meter and gauging data are summarized in Table 1.

Groundwater samples were collected from the four monitoring wells using new dedicated, disposable polyethylene bailers. Prior to sample collection, at least three times the volume of water in the wells was purged using the bailers or the wells were purged dry and allowed to

recharge before sampling. After a short stabilization period (approximately 30 minutes), groundwater samples were collected from the monitoring wells for analyses of volatile organic compounds (VOCs). The groundwater samples were submitted to Absolute Resource Associates of Portsmouth, New Hampshire. The samples were analyzed by United States Environmental Protection Agency (USEPA) Method 8260B, but were reported using the Vermont Department of Environmental Conservation (VTDEC) USEPA Method 8021 list for selected petroleum constituents.

Table 2 provides a current and historical summary of groundwater VOC data for the site. The laboratory analytical report for the September 2013 monitoring event is presented in Attachment A.

Laboratory analytical results for the May 2013 groundwater monitoring event indicated that VOCs were not detected above laboratory reporting limits in the groundwater samples from the four wells. Elevated concentrations of benzene (60 to 63 micrograms per liter [$\mu\text{g}/\text{L}$]) that were detected at well MW-8 (March and September 2012) and well MW-10R (March 2012) have apparently attenuated since the relatively high concentrations were detected in 2012.

POET AND SUPPLY WELL SYSTEM SAMPLING AND ANALYSIS

GeoInsight performed a supply well POET system monitoring event at the site on September 30, 2013, including the Shopping Center and Thorne-Thomsen supply wells (Figure 3). As discussed, the Former IGA well also located at the Shopping Center property (inactive, but recently rehabilitated as a backup well) was also sampled. The September 2013 POET system sampling data are summarized in Table 3. Table 4 provides a summary of recent and historical POET system influent sample data collected at the site and Thorne-Thomsen residence. The September 2013 analytical report is presented in Attachment A.

Available historical sampling data for the Former IGA well is presented in Table 4. In April 2000 through January 2002, methyl tert-butyl ether (MTBE) was not detected or detected at concentrations ranging from 1.2 to 2.7 $\mu\text{g}/\text{L}$ in the Former IGA well. During September 2013, with the exception of toluene, which was detected at a concentration of 13 $\mu\text{g}/\text{L}$, VOCs were not detected above laboratory reporting limits in the supply well sample collected from the Former IGA well (sample designated “SC Pump #1 INF”). Note, toluene is a constituent of petroleum fuels, but also is commonly found at low concentrations in recently rehabilitated supply wells, particularly as a result of electrical tape that is often used to secure the well pump supply piping to electrical cables serving the well pump.

POET system samples collected in September 2013 had MTBE detected at concentrations of 6.8 $\mu\text{g}/\text{L}$ in the system influent sample collected from the Shopping Center POET system and 4.9 $\mu\text{g}/\text{L}$ in the Thorne-Thomsen system influent sample. MTBE and other petroleum-related compounds were not detected above laboratory reporting limits in the effluent samples collected from the Shopping Center POET and the Thorne-Thomsen systems. The VTDEC drinking water guideline for MTBE is 40 $\mu\text{g}/\text{L}$.

GeoInsight also collected system mid-point samples from the POET systems serving the Shopping Center and Thorne-Thomsen supply wells. The mid-point sample data are summarized in Table 4. GeoInsight transmitted the results of the September 2013 POET system sampling to the property owners and the POET system operator, John Beauchamp of the Vermont Water Treatment Company, in letters dated December 27, 2013. Copies of the POET system results letters are included in Attachment B.

Quality Assurance/Quality Control

A trip blank sample was included by the laboratory with the sample containers during this monitoring event. VOCs were not detected above the laboratory reporting limits in the trip blank sample submitted for the September 2013 monitoring event. The trip blank sample was comprised of a laboratory-prepared VOC vial containing deionized water, which accompanied the sample containers in a cooler from delivery from the laboratory through receipt by the laboratory. GeoInsight also reviewed the surrogate recovery data reported by the laboratory for the samples collected during the September 2013 monitoring event, which were within the acceptable limits listed by the laboratory in the analytical reports.

In general, the quality assurance/quality control (QA/QC) samples indicated that the data collected were technically sound, usable, and meet the data quality objectives of on-going site investigation activities. A summary of QA/QC sample data is provided in Table 3.

CONCLUSIONS AND RECOMMENDATIONS

Because of the historical and recent detection of VOCs above laboratory reporting limits in the Shopping Center and Thorne-Thomsen POET system influent samples, the continuation of bi-annual sampling appears to be appropriate for monitoring low-level residual VOCs in the supply wells. It should be noted, however, that MTBE concentrations in the two system influent samples have not exceeded the VTDEC drinking water guideline (40 µg/L) since March 2006 (Shopping Center) and March 2007 (Thorne-Thomsen). Also, during the last four monitoring events, MTBE has ranged from not detected above the laboratory reporting limit to 5.5 µg/L in the Thorne-Thomsen supply well and concentrations ranging from 5.4 to 6.8 µg/L were detected in the Shopping Center well during this time. These more recent data indicate relatively stable MTBE concentration trends in the supply wells. Given the recent groundwater and the POET system sampling data, including the stable and low-level MTBE concentrations in supply wells, the site appears to be approaching conditions that may allow site closure. The next POET system monitoring event is set to occur in March 2014 (first quarter). Sampling of groundwater monitoring wells appears to be warranted annually at this time and, therefore, it is recommended that the next groundwater sampling event be performed in September 2014.

If you have questions regarding the contents of this letter report, please call us at (603) 314-0820.

Sincerely,
GEOINSIGHT, INC.

Decommissioned June 2010.				

NOTES:

1. Depth to groundwater measurements were from the top of polyvinyl chloride well casings.
2. Survey/reference elevations obtained from historical site investigation documents.
3. Prior to 10/10/08, measurements were performed by Environmental Compliance Services.
4. FT = feet; NS = not sampled.

	03/23/10	ND(2)	ND(2)	ND(2)	ND(2)	ND(2)	ND(2)	ND(2)	ND(2)

Monitoring well decommissioned June 2010.

NOTES:

1. Results reported in micrograms per liter ($\mu\text{g}/\text{L}$).
2. NS - not sampled.
3. ND(X) - constituent not detected above the laboratory reporting limit noted.
4. VPGESs - Vermont Primary Groundwater Enforcement Standards.
5. Concentrations in bold exceed VPGESs.
6. Prior to 10/10/08, samples were collected by Environmental Compliance Services.
7. EDB - 1,2-dibromoethane; 1,2-DCA - 1,2-dichloroethane; MTBE - methyl tert butyl ether.
8. -- - data not reported in historical reports or data no longer available.
9. * - Effective on 02/28/07, trimethylbenzene (TMB) enforcement standards increased to 350 $\mu\text{g}/\text{L}$, and includes 1,2,4-TMB and 1,3,5-TMB.
10. **Well MW-1R was resampled on 10/24/08 due to damaged sample vials received by the laboratory from the initial 10/09/08 monitoring event.

NOTES:

1. Results reported in micrograms per liter ($\mu\text{g}/\text{L}$).
2. Bold results indicate an exceedance of the applicable MCL.
3. ND(X) - constituent not detected above laboratory reporting limit noted.
4. MCL - Maximum Contaminant Levels for public water supplies from Chapter 21, Vermont Water Supply Rule (April 25, 2005) or Vermont Department of Health, Drinking Water Guidance (December 2002).
5. VHA - Vermont Health Advisories - guidelines for concentrations of chemicals in drinking water that do not have MCLs; VAL - Vermont Action Levels for eight chemicals of specific health concern in public water systems both established by the Vermont Department of Health (December 2002, revised February 2007).
6. Total TMB - 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene.
7. EDB - 1,2-dibromoethane; 1,2-DCA - 1,2-dichloroethane; MTBE - methyl tert butyl ether.

NOTES:

1. Results reported in micrograms per liter ($\mu\text{g}/\text{L}$); bold results indicate an exceedance of the applicable MCL.
2. NA - not applicable; NR - not reported; POET system - point-of-entry treatment system.
3. ND(X) - constituent not detected above laboratory reporting limit noted.
4. MCL - Maximum Contaminant Levels for public water supplies from Chapter 21, Vermont Water Supply Rule (04/25/05) or Vermont Department of Health, Drinking Water Guidance (December 2002).
5. VHA - Vermont Health Advisories - guidelines for concentrations of chemicals in drinking water that do not have MCLs; VAL - Vermont Action Levels for eight chemicals of specific health concern in public water systems both established by the Vermont Department of Health (December 2002, revised February 2007).
6. Total TMB - 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene.
7. MTBE - methyl tert butyl ether; TAME - tertiary amyl ethyl ether.
8. Sampling performed prior to the October 2008 monitoring event was not completed by GeoInsight, Inc.
These historical data were obtained from historical reports.

LABORATORY ANALYTICAL REPORT

Laboratory Report

Absolute Resource associates

124 Heritage Avenue Portsmouth NH 03801

Darrin Santos

GeoInsight, Inc.

186 Granite Street

3rd Floor, Suite A

Manchester, NH 03103

PO Number: None

Job ID: 28056

Date Received: 10/1/13

Project: Londonderry VT 5599

Attached please find results for the analysis of the samples received on the date referenced above.

Unless otherwise noted in the attached report, the analyses performed met the requirements of Absolute Resource Associates' Quality Assurance Plan. The Standard Operating Procedures are based upon USEPA SW-846, USEPA Methods for Chemical Analysis of Water and Wastewater, Standard Methods for the Examination of Water and Wastewater and other recognized methodologies. The results contained in this report pertain only to the samples as indicated on the chain of custody.

Absolute Resource Associates maintains certification with the agencies listed below.

We appreciate the opportunity to provide laboratory services. If you have any questions regarding the enclosed report, please contact the laboratory and we will be glad to assist you.

Sincerely,
Absolute Resource Associates

RE: Results of September 2013 Supply Well Treatment System Sampling
Thorne-Thomsen Residence
Londonderry Citgo/Londonderry Shopping Center
Londonderry, Vermont
VTDEC SMS #1996-2015

Dear Mr. Thorne-Thomsen:

At the request of the Vermont Department of Environmental Conservation (VTDEC), GeoInsight, Inc. collected water samples from your supply well point-of-entry treatment (POET) system during a September 30, 2013 monitoring event associated with the Londonderry Citgo/Londonderry Shopping Center site (SMS #1996-2015) located in Londonderry, Vermont. The POET system samples were submitted to Absolute Resource Associates of Portsmouth, New Hampshire for analysis of volatile organic compounds by United States Environmental Protection Agency Method 524.2.

A concentration of 4.9 micrograms per liter ($\mu\text{g}/\text{L}$) of methyl tertiary butyl ether (MTBE) was detected in the system influent sample ("TT INF"). The VTDEC Primary Groundwater Enforcement Standard and drinking water guideline for MTBE is 40 $\mu\text{g}/\text{L}$. MTBE was not detected above the laboratory reporting limit in the POET system effluent ("TT EFF") sample. Note that the effluent sample is collected after water is treated by the POET system.

A copy of the laboratory results for the September 2013 POET system monitoring event is enclosed for your records. Results for POET system mid-point sample ("TT MID") are also included in the laboratory report. This data is used by the water system operator to evaluate system maintenance requirements.

If you have questions regarding these results, contact us in our Manchester, New Hampshire office at (603) 314-0820.

Sincerely,
GEOINSIGHT, INC.

RE: Results of September 2013 Supply Well Treatment System Sampling
Londonderry Citgo/Londonderry Shopping Center
Londonderry, Vermont
VTDEC SMS #1996-2015

Dear Mr. Waite:

At the request of the Vermont Department of Environmental Conservation (VTDEC), GeoInsight, Inc. collected water samples from the supply well point-of-entry treatment (POET) system serving the Londonderry Shopping Center on September 30, 2013 during a monitoring event associated with the Londonderry Citgo/Londonderry Shopping Center site (SMS #1996-2015) in Londonderry, Vermont. In addition to sampling the "main" well for the property (also known as "Well #2"), a sample was also collected from the inactive, but recently rehabilitated Former IGA well (also known as "Well #1"). The POET system samples from the main well and the raw supply well sample from the Former IGA well were submitted to Absolute Resource Associates of Portsmouth, New Hampshire for analysis of volatile organic compounds by United States Environmental Protection Agency Method 524.2.

Methyl tertiary butyl ether (MTBE) was detected at a concentration of 6.8 micrograms per liter ($\mu\text{g}/\text{L}$) in the POET system influent ("SC-INF") sample. The VTDEC Primary Groundwater Enforcement Standard (VPGES) and drinking water guideline for MTBE is 40 $\mu\text{g}/\text{L}$. MTBE was not detected above the laboratory reporting limit in the POET system effluent ("SC-EFF") sample. Note that the effluent sample is collected after water is treated by the POET system. Toluene was detected at a concentration of 13 $\mu\text{g}/\text{L}$, which is below the VPGES of 1,000 $\mu\text{g}/\text{L}$, in the raw supply well sample collected after purging the Former IGA well. Note, toluene is a constituent in petroleum fuels, but also it is commonly found in recently rehabilitated wells, particularly as a result of electrical tape that is often used to secure well pump supply piping to the electrical cables when new pumps are installed.

A copy of the laboratory results for the September 2013 POET system and supply well monitoring event is enclosed for your records. Results for Shopping Center POET system
