RE: March 2017 Groundwater and POET System Sampling Report
Londonderry Citgo/Londonderry Shopping Center – **SMS #1996-2015**
5700 Route 100
Londonderry, Vermont

Dear Mr. Cropley:

GeoInsight, Inc. (GeoInsight) prepared this report for Summit Distributing, LLC (Summit) to summarize the March 2017 point-of-entry treatment (POET) system and groundwater monitoring event performed at the Londonderry Citgo/Londonderry Shopping Center (the Shopping Center) property located at 5700 Route 100 in Londonderry, Vermont. A site locus map is presented as Figure 1 and a site plan is presented as Figure 2. The March 2017 sampling included POET systems serving the Shopping Center and Thorne-Thomsen properties in addition to sampling of accessible site groundwater monitoring wells.

GROUNDWATER SAMPLING AND ANALYSIS

Groundwater sampling activities on March 17, 2017 included gauging groundwater elevations and collecting groundwater samples from monitoring wells MW-5, MW-8, and MW-10R. Wells MW-S2 and MW-11R were inaccessible during the March 2017 sampling event. Groundwater elevations were measured at these wells using an electronic water level meter and gauging data are summarized in Table 1.

Groundwater samples were collected from the three monitoring wells using new dedicated, disposable polyethylene bailers. Prior to sample collection, at least three times the volume of water in the wells was purged using the bailers or the wells were purged dry and allowed to recharge before sampling. After a short stabilization period (approximately 30 minutes), groundwater samples were collected from the monitoring wells for analyses of volatile organic compounds (VOCs). The groundwater samples were submitted to Absolute Resource

Associates, LLC of Portsmouth, New Hampshire. The samples were analyzed by United States Environmental Protection Agency (USEPA) Method 8260C, but were reported using the Vermont Department of Environmental Conservation (VTDEC) USEPA Method 8021 list for selected petroleum constituents.

Table 2 provides a current and historical summary of groundwater VOC data for the site. The laboratory analytical report for the March 2017 monitoring event is presented in Attachment A.

Laboratory analytical results for the March 2017 groundwater monitoring event indicated that VOCs were not present above laboratory reporting limits in the groundwater samples from the three wells. VOCs have not been detected at concentrations exceeding groundwater standards since March and September 2012, when benzene (60 and 63 µg/L) was detected at well MW-8.

An updated groundwater elevation contour plan is presented as Figure 3; however, due to the linear orientation of three available monitoring wells, the resulting contour pattern is limited. Groundwater flow was to the southwest, which is generally consistent with past findings.

POET AND SUPPLY WELL SYSTEM SAMPLING AND ANALYSIS

GeoInsight performed a supply well POET system monitoring event at the site on March 17, 2017, including the Shopping Center and Thorne-Thomsen supply wells (Figure 2). The March 2017 POET system sampling data are summarized in Table 3. Table 4 provides a summary of recent and historical POET system influent sample data collected at the site and at the Thorne-Thomsen residence. The March 2017 analytical report is presented in Attachment A.

POET system samples collected in March 2017 contained methyl tert butyl ether (MTBE) at concentrations of 7.6 µg/L in the system influent sample collected from the Shopping Center POET system and 43 µg/L in the Thorne-Thomsen system influent sample. The concentration in the Thorne-Thomsen influent sample was above VTDEC drinking water guidelines of 11.3 µg/L for MTBE and other petroleum-related compounds were not detected above laboratory reporting limits in the effluent samples collected from the Shopping Center and Thorne-Thomsen POETs.

GeoInsight also collected system mid-point samples from the POET systems serving the Shopping Center and Thorne-Thomsen supply wells. The mid-point sample data are summarized in Table 3. GeoInsight transmitted the results of the March 2017 POET system sampling to the property owners and the POET system operator, John Beauchamp of the Vermont Water Company, in letters dated June 15, 2017. Copies of the POET system results letters are included in Attachment B.

Quality Assurance/Quality Control

A trip blank sample was included by the laboratory with the sample containers during this monitoring event. VOCs were not detected above the laboratory reporting limits in the trip blank sample submitted for the March 2017 monitoring event. The trip blank sample was comprised of a laboratory-prepared VOC vial containing deionized water, which accompanied the sample

containers in a cooler from delivery from the laboratory through receipt by the laboratory. GeoInsight also reviewed the surrogate recovery data reported by the laboratory for the samples collected during the March 2017 monitoring event, which were within the acceptable limits listed by the laboratory in the analytical reports.

In general, the quality assurance/quality control (QA/QC) samples indicated that the data collected were technically sound, usable, and meet the data quality objectives of on-going site investigation activities. A summary of QA/QC sample data is provided in Table 3.

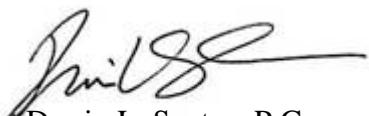

CONCLUSIONS AND RECOMMENDATIONS

Because of the historical and recent detection of VOCs above laboratory reporting limits in the Shopping Center and Thorne-Thomsen POET system influent samples (raw, untreated supply well water samples), the continued operation of the POET system is warranted and bi-annual POET system sampling appears to be appropriate for monitoring residual VOCs in the supply wells. It should be noted that MTBE concentrations in the Shopping Center Main system influent samples exceeded the VTDEC drinking water guideline (11.3 µg/L) only once since September 2007, when 12 µg/L was detected in September 2010. However, the Thorne-Thomsen system influent exceeded drinking water guidelines this sampling period at a concentration of 43 µg/L (guideline is 11.3 µg/L). The more recent data indicates relatively low-level and stable MTBE concentration trends in the Shopping Center well and possible increasing levels in the Thorne-Thomsen well (since 2014).

Sampling of groundwater monitoring wells appears to be warranted once a year at this time and, therefore, it is recommended that the next groundwater sampling event be performed in March 2018. The next POET system monitoring event is set to occur in September 2017.

If you have questions regarding the contents of this letter report, please call us at (603) 314-0820.

Sincerely,
GEOINSIGHT, INC.

Decommissioned June 2010.

NOTES:

1. Depth to groundwater measurements were from the top of polyvinyl chloride well casings.
2. Survey/reference elevations obtained from historical site investigation documents.
3. Prior to 10/10/08, measurements were performed by Environmental Compliance Services.
4. FT = feet; NS = not sampled.

	03/23/10	ND(2)	ND(2)	ND(2)	ND(2)	ND(2)	ND(2)	ND(2)	ND(2)	ND(2)

NOTES:

1. Results reported in micrograms per liter ($\mu\text{g}/\text{L}$).
2. NS - not sampled.
3. ND(X) - constituent not detected above the laboratory reporting limit noted.
4. VPGESs - Vermont Primary Groundwater Enforcement Standards.
5. Concentrations in bold exceed VPGESs.
6. Prior to 10/10/08, samples were collected by Environmental Compliance Services.
7. EDB - 1,2-dibromoethane; 1,2-DCA - 1,2-dichloroethane; MTBE - methyl tert butyl ether.
8. -- - data not reported in historical reports or data no longer available.
9. * - Effective on 02/28/07, trimethylbenzene (TMB) enforcement standards increased to 350 $\mu\text{g}/\text{L}$, and includes 1,2,4-TMB and 1,3,5-TMB.
10. **Well MW-1R was resampled on 10/24/08 due to damaged sample vials received by the laboratory from the initial 10/09/08 monitoring event.

NOTES:

1. Results reported in micrograms per liter ($\mu\text{g}/\text{L}$).
2. Bold results indicate an exceedance of the applicable MCL.
3. ND(X) - constituent not detected above laboratory reporting limit noted.
4. MCL - Maximum Contaminant Levels for public water supplies from Chapter 21, Vermont Water Supply Rule (April 25, 2005) or Vermont Department of Health, Drinking Water Guidance (December 2002).
5. VHA - Vermont Health Advisories - guidelines for concentrations of chemicals in drinking water that do not have MCLs; VAL - Vermont Action Levels for eight chemicals of specific health concern in public water systems both established by the Vermont Department of Health (December 2002, revised October 2015).
6. Total TMB - 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene.
7. EDB - 1,2-dibromoethane; 1,2-DCA - 1,2-dichloroethane; MTBE - methyl tert butyl ether.

NOTES:

1. Results reported in micrograms per liter ($\mu\text{g}/\text{L}$); bold results indicate an exceedance of the applicable MCL.
2. NA - not applicable; NR - not reported; POET system - point-of-entry treatment system.
3. ND(X) - constituent not detected above laboratory reporting limit noted.
4. MCL - Maximum Contaminant Levels for public water supplies from Chapter 21, Vermont Water Supply Rule (04/25/05) or Vermont Department of Health, Drinking Water Guidance (December 2002, revised October 2015).
5. VHA - Vermont Health Advisories - guidelines for concentrations of chemicals in drinking water that do not have MCLs; VAL - Vermont Action Levels for eight chemicals of specific health concern in public water systems both established by the Vermont Department of Health (December 2002, revised February 2007).
6. Total TMB - 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene.
7. MTBE - methyl tert butyl ether; TAME - tertiary amyl ethyl ether.
8. Sampling performed prior to the October 2008 monitoring event was not completed by GeoInsight, Inc. These historical data were obtained from historical reports.
9. The laboratory reported that non-target compounds tetrahydrofuran and methyl ethyl ketone were detected in the 8021 Vermont Petroleum List analysis in the March 2015 Former IGA well sample.

LABORATORY ANALYTICAL REPORT

Laboratory Report

Absolute Resource associates

124 Heritage Avenue Portsmouth NH 03801

Darrin Santos

GeoInsight, Inc.

186 Granite Street

3rd Floor, Suite A

Manchester, NH 03103

PO Number: None

Job ID: 39544

Date Received: 3/20/17

Project: Londonderry VT 5599

Attached please find results for the analysis of the samples received on the date referenced above.

Unless otherwise noted in the attached report, the analyses performed met the requirements of Absolute Resource Associates' Quality Assurance Plan. The Standard Operating Procedures are based upon USEPA SW-846, USEPA Methods for Chemical Analysis of Water and Wastewater, Standard Methods for the Examination of Water and Wastewater and other recognized methodologies. The results contained in this report pertain only to the samples as indicated on the chain of custody.

Absolute Resource Associates maintains certification with the agencies listed below.

We appreciate the opportunity to provide laboratory services. If you have any questions regarding the enclosed report, please contact the laboratory and we will be glad to assist you.

Sincerely,
Absolute Resource Associates

RE: Results of March 2017 Supply Well Treatment System Sampling
Londonderry Citgo/Londonderry Shopping Center
Londonderry, Vermont
VTDEC SMS #1996-2015

Dear Mr. Bove:

At the request of the Vermont Department of Environmental Conservation (VTDEC), GeoInsight, Inc. (GeoInsight) collected water samples from the supply well point-of-entry treatment (POET) system serving the Londonderry Shopping Center on March 17, 2017 during a monitoring event associated with the Londonderry Citgo/Londonderry Shopping Center site (SMS #1996-2015) in Londonderry, Vermont. The POET system samples were submitted to Absolute Resource Associates, LLC of Portsmouth, New Hampshire for analysis of volatile organic compounds (VOCs) by United States Environmental Protection Agency Method 524.2.

Methyl tertiary butyl ether (MTBE) was detected at a concentration of 7.6 micrograms per liter ($\mu\text{g}/\text{L}$) in the POET system influent ("SC INF") sample. The VTDEC Primary Groundwater Enforcement Standard (VPGES) for MTBE is 40 $\mu\text{g}/\text{L}$ and the drinking water guideline is 11.3 $\mu\text{g}/\text{L}$. MTBE was not detected above the laboratory reporting limit in the POET system effluent ("SC EFF") sample. Note that the effluent sample is collected after water is treated by the POET system.

A copy of the laboratory results for the March 2017 POET system and supply well monitoring event is enclosed for your records. Results for Shopping Center POET system mid-point samples ("SC MID A" and "SC MID B") are also included in the laboratory report. This data is used by the water system operator to evaluate system maintenance requirements.

If you have questions regarding these results, contact us in our Manchester, New Hampshire office at (603) 314-0820.

Sincerely,
GEOINSIGHT, INC.

RE: Results of March 2017 Supply Well Treatment System Sampling
Thorne-Thomsen Residence
Londonderry Citgo/Londonderry Shopping Center
Londonderry, Vermont
VTDEC SMS #1996-2015

Dear Mr. Thorne-Thomsen:

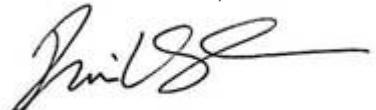

At the request of the Vermont Department of Environmental Conservation (VTDEC), GeoInsight, Inc. collected water samples from your supply well point-of-entry treatment (POET) system during a March 17, 2017 monitoring event associated with the Londonderry Citgo/Londonderry Shopping Center site (SMS #1996-2015) located in Londonderry, Vermont. The POET system samples were submitted to Absolute Resource Associates, LLC of Portsmouth, New Hampshire for analysis of volatile organic compounds by United States Environmental Protection Agency Method 524.2.

A concentration of 43 micrograms per liter ($\mu\text{g}/\text{L}$) of methyl tertiary butyl ether (MTBE) was detected in the system influent sample ("TT INF"). The VTDEC Primary Groundwater Enforcement Standard is 40 $\mu\text{g}/\text{L}$ and drinking water guideline for MTBE is 11.3 $\mu\text{g}/\text{L}$; therefore, the influent sample is above recommended limits. The system mid-point sample (after first and before second treatment vessel) had 11 $\mu\text{g}/\text{L}$ of MTBE. MTBE was not detected above the laboratory reporting limit in the POET system effluent ("TT EFF"). Note that the effluent sample is collected after water is treated by the POET system and the influent sample is the raw, untreated water entering the system from the supply well.

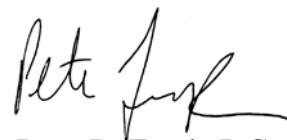

A copy of the laboratory results for the March 2017 POET system monitoring event is enclosed for your records. If you have questions regarding these results, contact us in our Manchester, New Hampshire office at (603) 314-0820.

Sincerely,
GEOINSIGHT, INC.
