RE: Site Management Activity Completed, Cumberland Farms Station #4003,
Randolph, Vermont (site #98-2406)

Dear Ms. Polleys:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has determined that your site is now eligible for a Sites Management Activities Complete (SMAC) designation.

This means that the SMS has determined the following:

- The source of the petroleum contamination (the leaking underground storage tank piping systems) were removed and upgraded in 1998;
- The site was remediated using soil removal. Approximately 532 tons of petroleum contaminated soils were shipped to MTS Environmental in New Hampshire;
- Groundwater under this site currently is above the Vermont Groundwater Enforcement Standards, therefore you had a Notice to the Land Record placed in the town clerks office on March 29, 2007, in book 164, pages 517-518; and
- The site does not present a current threat to human health or the environment.

Based on these findings, the site has been assigned a Site Management Activities Completed (SMAC) designation. Sites which the Waste Management Division has determined require no further management are classified as SMAC. This designation does not release the Cumberland Farms, Inc. from any past or future liability which may arise from any contamination which may be present at the site. It does mean that the SMS is not requiring any additional work be performed at this site in response to the contamination discovered in 1998. If any additional information

comes to light in the future, then the SMS may reconsider this determination.

If you have any questions concerning this matter, please feel free to contact Richard Spiese or me at (802) 241-3888.

Sincerely,

George Desch, P.E., Chief
Sites Management Section
