RE: Site Management Activity Completed, Lind Well Drilling, Searsburg, Vermont
 (site #98-2570)

Dear Mr. Lind:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has received and reviewed the March 19 and April 14, 1999 Aaron & Sons correspondences concerning the above referenced site. Based on a review of the site, the current conditions at this site and the results of the Aaron & Sons letters, the SMS has determined that this site meets the Waste Management Division's Sites Management Activities Complete (SMAC) policy.

This means that the SMS has determined the following:

- the source of the potential contamination at this site has been adequately characterized and removed (the underground storage tank and piping has been removed, and the assessment found no contamination affiliated with these tanks);
- the site does not pose an unreasonable risk to human health or the environment;

Based on these findings, the site has been assigned a Site Management Activities Completed (SMAC) designation. Sites which the Waste Management Division has determined require no further management are classified as SMAC. This designation does not release you from any past or future liability which may arise from the petroleum contamination which originated from the underground storage tank systems at this site. It does mean that the SMS is not requiring any additional work be performed at this site in response to the 1998 release. If any additional information comes to light in the future, then the SMS may reconsider this determination.
