RE: **Site Management Activity Completed**, Lynburke Motel Property, Lyndon (site #98-2571)

Dear Mr. and Mrs. Elliott:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has received the request for **Sites Management Activities Complete (SMAC)** determination from your environmental consultant, Lincoln Applied Geology, Inc., concerning the above referenced site. Based on a review of the file and SMAC procedures, the SMS has determined that this site meets the Waste Management Division's SMAC policy.

This means that the SMS has determined the following:

- the source of the petroleum contamination was removed in 1998;
- groundwater under the site meets Vermont Groundwater Enforcement Standards; and
- the site does not pose an unreasonable risk to human health or the environment.

Based on these findings, the site has been assigned a **Site Management Activities Completed (SMAC)** designation. Sites which the Waste Management Division has determined require no further management are classified as SMAC. This designation does not release the you from any past or future liability which may arise from any contamination which may be present from the 1998 release. It does mean that the SMS is not requiring any additional work be performed at this site in response to the contamination discovered in 1998. If any additional information comes to light in the future, then the SMS may reconsider this determination.

If you have any questions concerning this matter, please feel free to contact Richard Spiese or me at (802) 241-3888.

Sincerely,

George Desch, P.E., Chief
Sites Management Section
